## Grados & Rompevirutas

### **A** Grados

**A02** Sistema de Grados

#### **Grados de Torneado**

- A04** Selecciones de grados torneados
- A05** Recubrimiento CVD
- A14** Recubrimiento PVD
- A18** Grados de carburo sin recubrimiento
- A20** Grados Cermet
- A23** Grados cermet con recubrimiento

#### **Grados de Fresado**

- A26** Selecciones de grado de fresado
- A27** Recubrimiento CVD
- A29** Recubrimiento PVD
- A37** Grados de carburo sin recubrimiento
- A38** Grados Cermet

### **A** Fresas Sólidas y Grados de Brocas Sólidas

**A39** Selecciones de grados de Endmills Sólido

**A41** Selecciones de grado de brocas Solidas

#### **Otros (torneado / fresado / fresas)**

- A43** Grados con Recubrimiento de Diamante
- A44** Grados con Recubrimiento DLC
- A46** Grados de insertos cBN
- A51** Grados de insertos PCD

### **Rompevirutas**

- A52** Rompeviruta Para Torneado
- A56** Rompeviruta Para Fresado
- A61** Rompeviruta Para Brocas

## Torneado

### **B** Rompevirutas Torneado

- B02** Rango de Aplicación de las Rompevirutas
- B04** Recomendada según pieza de trabajo
- B12** Características rompe virutas

#### **Insertos**

- B26** Insertos para Torneado Sistema de Codificación (ISO)
- B28** Insertos para Torneado (Negativo)
- B66** Insertos para Torneado (Positivo)
- B90** Insertos para Aluminio (Positivo)
- B98** Insertos cBN
- B102** Insertos PCD

#### **SAVE TURN**

- B104** Información técnica SAVE TURN
- B105** SAVE TURN

#### **Auto Tools**

- B111** Información Técnica para Herramientas para Auto Tools
- B112** Tipo ISO
- B117** KHP
- B121** Tipo Blade
- B124** Tipo multiusos
- B127** Tipo KGT/MGT
- B130** Micro Boreado de Carburo (MSB)
- B136** Sleeve

#### **Multi Turn**

- B137** Multi Turn

#### **Solución en Rodamientos**

- B140** Información Técnica para Solución en Rodamientos
- B147** Formato para Inserto Rodamientos Especial

### **B** Portainserto Externo

- B148** Sistema Codificación para Portalinsertos (ISO)
- B153** Características Doble Brida / Sistema de Palanca
- B154** Sistema de Brida Doble
- B159** Sistema de Palanca
- B167** Sistema Brida Amplia
- B169** Sistema de Brida
- B171** Sistema Multi-trabe
- B178** Sistema con tornillo
- B185** Portaherramientas insertos de cerámica

#### **Porta provisto de refrigerante a alta presión**

- B187** Información técnica para KHP Coolant

#### **Barras para Interior**

- B191** Sistema de Codificación (ISO)
- B195** Sistema de Brida Doble
- B197** Sistema de Palanca
- B201** Sistema de Brida
- B202** Sistema Multi-trabe
- B204** Sistema con tornillo
- B214** Compact Mini

#### **Herramientales HSK/KM**

- B217** Información Técnica para Herramientales HSK/KM
- B220** Herramienta con Sistema HSK
- B226** Herramienta con Sistema KM

#### **Cartuchos**

- B230** Sistema de Codificación de Cartuchos (ISO)
- B232** Sistema de Brida
- B234** Sistema con Tornillo

## Herramientas multifuncionales

### **C** Ejemplo de aplicación

- C02** Ejemplo de aplicación
- C04** Información técnica para herramientas multi función

### **KGT**

- C07** Información técnica para KGT
- C24** Tipo de lama para tronzado

### **MGT**

- C25** Información técnica para MGT
- C30** Portaherramienta de MGT

### **Cartucho de KGT/MGT**

- C38** Información técnica para cartuchos KGT/MGT
- C40** Tipo de cartucho KGT/MGT

### **MGT Serie de ruedas de aluminio**

- C42** Información técnica para MGT Rueda de aluminio

### **TB/TB-M**

- C46** Información técnica para TB/TB-M
- C53** Portaherramienta de TB/TB-M

### **C** K Notch

- C54** Información técnica para K Notch
- C58** Portaherramienta de K Notch

### **Saw-man**

- C59** Saw-man

### **Saw Man-X**

- C62** Saw Man-X

### **Fine Tools**

- C65** Fine Tools

### **Ranurado/Tronzado**

- C68** IGH/DBH
- C69** GFT/GFIP
- C70** GH/GFIK
- C71** EH/PH

### **Formulario de pedido especial**

- C72** Formulario de pedido especial para MGT
- C73** Formulario de pedido especial para inserto de polea en la forma V

## Roscado

### **D** Sistema de Codificación Roscado

- D02** Sistema de Codificación de Insertos de Roscado
- D02** Sistema de Codificación Externo/Interno

### **Información Técnica para Roscado**

- D03** Información Técnica para Roscado
- D09** Insertos de Roscado con Rompeviruta

### **Inserto para Roscado**

- D10** Perfil parcial de 60°
- D11** Perfil parcial de 55°
- D12** ISO Métrico
- D16** American UN
- D18** Whit worth
- D22** Rosca BSPT/Rosca NPT
- D23** Rosca NPT - Dry seal
- D23** DIN405 Redondo
- D24** DIN103 Trapezoidal/American ACME

# GUIA DE SEGURIDAD PARA PRODUCTOS DE CARBURO

**KORLOY Inc. continuamente trata de desarrollar productos seguros y de buena calidad.**

**Antes de usar los productos KORLOY Inc., lea la siguiente guía de seguridad.**

- A continuación se presenta una guía de manejo para las herramientas de carburo. Para mayor información, contáctenos.
- KORLOY no se hace responsable por cualquier daño causado por alteraciones inapropiadas de las herramientas o por abuso de las mismas

## 1. Responsabilidad por productos

De acuerdo a la ley de Responsabilidad por productos, hemos adjuntado una etiqueta de advertencia en todos los empaques de los productos KORLOY, pero no hay advertencias en la superficie directa de las herramientas. Lea esta guía de seguridad antes de usar las herramientas de carburo, y proporciónela a los usuarios de las mismas.

## 2. Características básicas de las herramientas de carburo

Las herramientas de carburo están hechas a base de carburo, nitruro, nitruro de carbono, óxidos de W, Ti, Al, Si, Ta, B etc. y componentes metálicos tales como Co, Ni, Cr, Mo como aglutinante. Las herramientas de carburo tienen una gran dureza y peso específico. Generalmente carecen de olor, pero de acuerdo al uso y trato recibido, puede cambiar tanto su color como olor.

## 3. Precauciones al usar herramientas de carburo

- 1) Los carburos son extremadamente duros, pero a la vez son quebradizos. Los impactos constantes o apretar la herramienta con demasiada fuerza pueden resultar en fracturas.
- 2) Los carburos tienen un alto peso específico de manera que requieren de atención especial cuando se manejan piezas muy grandes o en grandes cantidades.
- 3) Los carburos tienen diferentes coeficientes de expansión térmica que el acero y otros materiales féreos. Los productos ajustables pueden causar problemas si se emplean en condiciones desfavorables, como en temperaturas extremas.
- 4) Hay muchos productos de carburo que tienen bordes afilados. Tenga cuidado de no manejar las herramientas con las manos descubiertas para evitar heridas. Preste especial atención al extraer las herramientas de su empaque, no toque los bordes y tenga cuidado de no tirarlas.
- 5) Almacenar las herramientas de carburo en una atmósfera corrosiva puede producir erosión en las herramientas, lo cual resultaría en una baja resistencia.
- 6) Antes de usar las herramientas, lea la guía de seguridad del catálogo.
- 7) No use las herramientas en condiciones inapropiadas.

## 4. Precauciones para maquinado (Rectificado, Soldadura, EDM) de herramientas de carburo

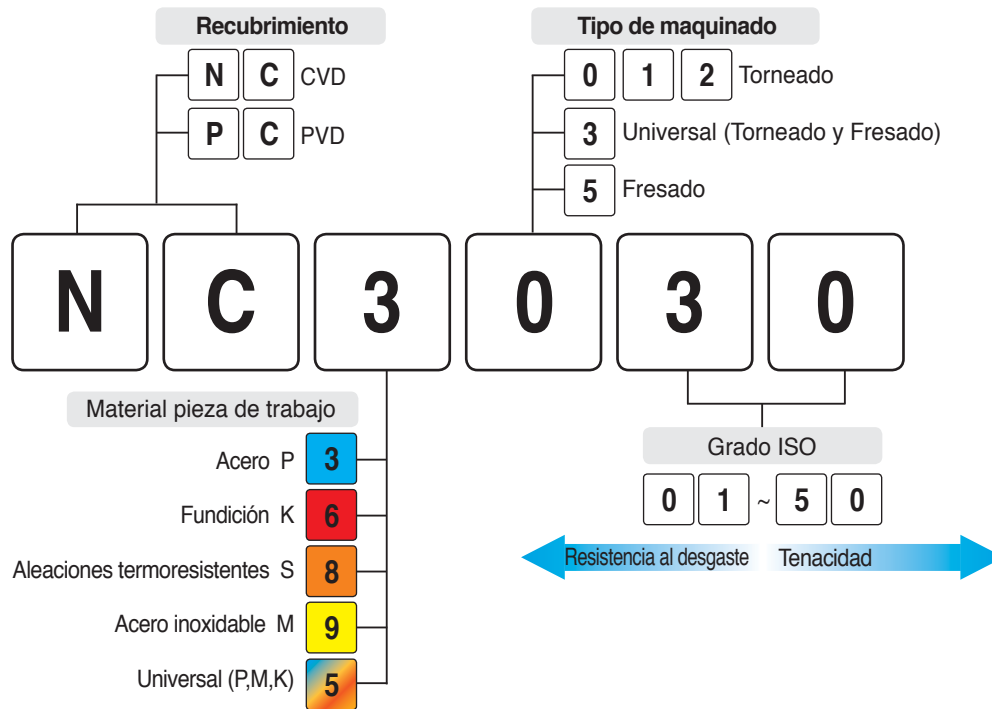

- 1) La condición de la superficie puede afectar la resistencia de la herramienta, así que es recomendable usar un esmeril de diamante.
- 2) La rectificación de elementos de carburo produce humos o polvos dañinos para la salud, de manera que es recomendable usar máscara u otro equipo de protección. Si el polvo entra en contacto con la piel o los ojos, lave inmediatamente con agua corriente.
- 3) En caso de rectificado con refrigerantes, el refrigerante contiene componentes metálicos dañinos que pueden causar problemas ambientales. Haga buen uso del refrigerante.
- 4) Después de rectificar las herramientas de carburo, revise que no haya grietas.
- 5) El marcado con láser o pluma eléctrica puede producir grietas en la herramienta y acortar la vida útil de la misma.
- 6) Someter a una herramienta de carburo a un proceso de EDM puede producir grietas, de ser necesario, elimínelas con una rectificación.
- 7) Soldar las herramientas de carburo a muy altas temperaturas en comparación de la soldadura puede aflojar la herramienta o romperla.
- 8) El uso de refrigerantes a base de aceite puede producir fuego como resultado del sobrecalentamiento, tome precauciones

## 5. TIPS DE SEGURIDAD

|                         | SEGURIDAD AL MAQUINAR METAL  | PLAN DE SEGURIDAD  |
|-------------------------|--|--|
| Herramientas de Corte   | • El filo de las herramientas puede cortar   | • Use guantes al extraer los insertos del empaque o al montarlos en la máquina   |
|                         | • El uso incorrecto o bajo condiciones inapropiadas puede resultar en fragmentación de la herramienta y el desprendimiento de las piezas puede causar daño   | • Use lentes o equipo protector<br>• Use las herramientas dentro del rango recomendado<br>• Primero consulte la guía de seguridad del catálogo |
|                         | • El uso excesivo de un filo produce desgaste, el cual puede ocasionar una fractura en la herramienta  | • Use lentes o equipo protector<br>• Cambie la herramienta cuando sea apropiado  |
|                         | • Las virutas producidas por el corte son filosas y se encuentran a altas temperaturas, pueden causar quemaduras o cortaduras  | • Use lentes o equipo protector<br>• Detenga la máquina primero, use guantes y elimine las virutas   |
|                         | • Tocar la pieza de trabajo inmediatamente después del corte puede producirle quemaduras   | • Use lentes o equipo protector  |
|                         | • Tenga en cuenta que las chispas y virutas generadas por el corte pueden producir un incendio o explosión   | • No se emplee en lugares donde hay materiales explosivos<br>• Prepárese con equipo para combatir incendios                                    |
|                         | • En caso de maquinado a altas RPM, se pueden presentar vibraciones y chirridos si existen problemas de balanceo   | • Use lentes o equipo protector<br>• Antes de hacer el corte, revise que no haya vibraciones o chirridos                                       |
|                         | • Las rebabas en la pieza de corte pueden ocasionar heridas o quemaduras   | • No se maneje con las manos desnudas. Use lentes o equipo protector   |
|                         | • Dejar la pieza de trabajo mal apretada puede fracturar la herramienta y producirle un daño al operador   | • Apriete bien la pieza  |
| Herramientas Indexables | • Generalmente las herramientas se operan en sentido derecho, operarlas en sentido izquierdo puede fracturar la herramienta y dañar al operador  | • No use el sentido izquierdo inadvertidamente<br>• Consulte en el empaque si es posible operar en el sentido izquierdo                        |
|                         | • Un inserto mal apretado puede soltarse de la herramienta durante su uso y dañar al operador<br>• Si sobre aprieta los insertos éstos pueden fracturarse y soltarse de la herramienta. (No utilizar palanca para apretar) | • Revise que los insertos y otras piezas estén bien fijos, y use únicamente partes originales<br>• No sobreapretar                             |
| Herramientas Giratorias | • La fuerza centrífuga del maquinado de alta velocidad puede desprender las partes o insertos de la herramienta  | • Use únicamente bajo las condiciones recomendadas<br>• Use lentes o equipo protector  |
|                         | • Tocar los filos de la cortadora puede dañar al operador  | • Use lentes o equipo protector  |
|                         | • Es peligroso usar guantes con una máquina rotatoria. También es peligroso el contacto del cuerpo o ropa con las partes rotatorias  | • No use guantes cuando trabaje con máquinas rotatorias<br>• Mantenga el cuerpo y ropa alejados de la máquina                                  |
|                         | • Las vibraciones generadas por problemas de balanceo pueden fracturar la herramienta  | • Las RPM deben permanecer bajo las condiciones recomendadas<br>• Revise periódicamente el balance de la pieza rotatoria                       |
| Htas. cementadas        | • Al barrenar, la viruta puede salir a gran velocidad  | • Use lentes o equipo protector  |
|                         | • Los bordes de las brocas pequeñas son filosos y se rompen fácilmente   | • Use guantes u otra protección  |
| Etc.                    | • Al fragmentarse una punta de carburo puede dispararse y dañar al operador  | • Revise la punta antes de usarla<br>• No use a altas temperaturas   |
|                         | • La punta de carburo se puede romper después de soldarse varias veces<br>• El mal uso de las herramientas puede fracturar la maquinaria o herramienta   | • No usar puntas de carburo que se han usado varias veces<br>• Apéguese a las regulaciones de seguridad  |

# Sistema de Codificación KORLOY Inc.

## Nomenclatura para Recubrimiento del Carburo

## Rompe virutas

El mismo rompe virutas puede ser usado en insertos positivos y negativos

## Terminología

| Termino                     | Codigo | Unidad            |

## Grados & Rompevirutas

Los nuevos grados de Korloys son diseñados con sustratos óptimos por cada aplicación y son PVD recubiertos para temperaturas altas, alta dureza y resiste oxidación. Adicionalmente, la mejora de posttratamiento de recubrimiento proporciona acabados superficiales superiores para garantizar los mas altos niveles de calidad y productividad.

### **Grados**

A02 Sistema de Grados

### **Grados de Torneado**

A04 Selecciones de grados torneados  
A05 Recubrimiento CVD  
A14 Recubrimiento PVD  
A18 Grados de carburo sin recubrimiento  
A20 Grados Cermet  
A23 Grados cermet con recubrimiento

### **Grados de Fresado**

A26 Selecciones de grado de fresado  
A27 Recubrimiento CVD  
A29 Recubrimiento PVD  
A37 Grados de carburo sin recubrimiento  
A38 Grados Cermet

### **Fresas Sólidas y Grados de Brocas Sólidas**

A39 Selecciones de grados de Endmills Sólido  
A41 Selecciones de grado de brocas Solidas

### **Otros (torneado / fresado / fresas)**

A43 Grados con Recubrimiento de Diamante  
A44 Grados con Recubrimiento DLC  
A46 Grados de insertos cBN  
A51 Grados de insertos PCD

### **Rompevirutas**

A52 Rompeviruta Para Torneado  
A56 Rompeviruta Para Fresado  
A61 Rompeviruta Para Brocas

### Rango de aplicación Grados para Torneado

# Recubrimiento CVD

## NC3215 / NC3225

- Grado universal diseñado especialmente para el mecanizado de componentes de automóviles forjados y rodamientos de acero tanto en corte continuo como interrumpido.
- Disponible para todo tipo de aceros: acero al carbono, acero aleado, acero laminado, acero para herramientas, acero dulce y otros tipos especiales de acero.
- La nueva tecnología de recubrimiento aumenta la resistencia a la soldadura y la resistencia al astillado, lo que aumenta la vida útil de la herramienta.

### Características

- Mayor vida útil & mayor cantidad de viruta cortada
  - Mejores condiciones de corte, reduciendo tiempo de maquinado
- Vida estable
  - Mayor productividad
- Combinación ideal de grado y rompe virutas
  - Prolongando vida
  - Ampliando aplicaciones y rango de maquinado

• Dispersión carga de corte → Menos fractura → Mayor vida útil → Más productividad

### Rango de Aplicaciones

## Recubrimiento CVD

Grado recuberto de CVD para la alta eficiencia y la calidad del torneado de fundición

# NC6310 <sup>new</sup> / NC6315

- Recubrimiento CVD con mayor resistencia al desgaste y al astillamiento
- Soluciones para los problemas más comunes en el mecanizado de hierro fundido, para prevenir el desgaste excesivo en la superficie y filo del inserto, la astilladura y la formación de rebabas

### Características de NC6310

Desgaste normal en cara de ataque y el radio de la punta

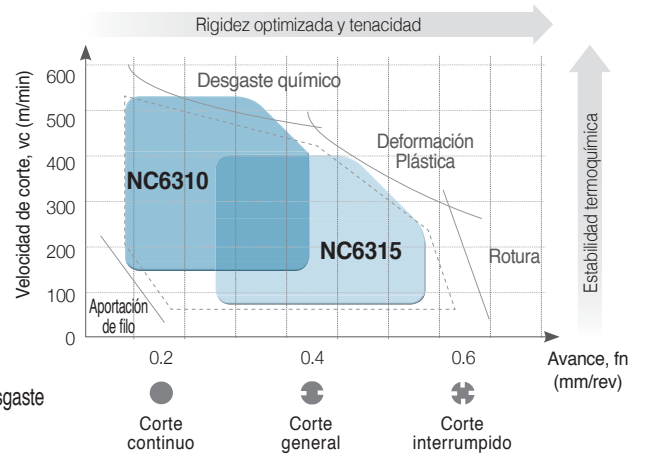

NC6310

Grado Existente (K10)

### Rango recomendado de maquinado para cada grado

### Características de NC6315

Mejorada la resistencia al desgaste y al despostillamiento

NC6315

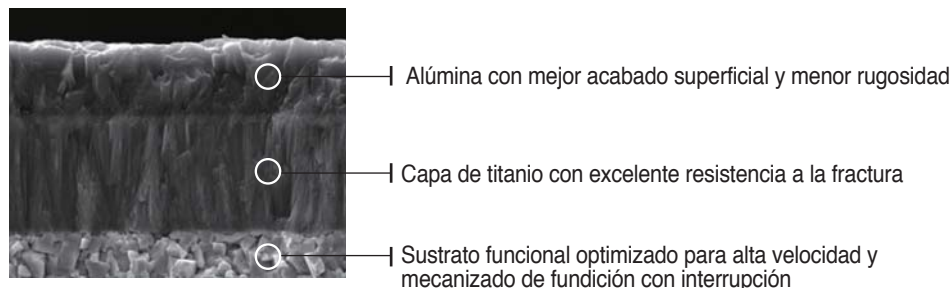

Grado existente (K15)

Desgaste en flanco normal

NC6315

Grado existente (K15)

# Recubrimiento CVD

## Insertos de torneado para acero inoxidable

NC9115 **new** / NC9125 **new** / NC9135 **new**

- Evita la formación de filo de aportación, el desgaste en entalla, la deformación plástica y la formación de rebabas
- Vida extendida de la herramienta a altas velocidades, altos avances y grandes profundidades de corte
- Combinación ideal con rompe virutas MM y RM para una vida estable y cubrir muchas aplicaciones, desde desbaste a acabado
- Vida estable a alto avance y alta velocidad (para inoxidables STS316, vc de 150m/min)
- Excelente versatilidad y adaptación al cambio en la pieza de trabajo
- NC9115 también está diseñado para mecanizado de acero P20, acero dulce y acero forjado.

### Características

- Mejor superficie gracias al nuevo tratamiento lubricativo para la capa CVD

#### Capa CVD lubricada que ayuda a impedir el filo de aportación

NC9100 Series

Recubrimiento antiguo

- Capa superior con rugosidad mejorada
- Al<sub>2</sub>O<sub>3</sub> estable y de alta dureza
- Carbonitruro de titanio de alta dureza
- Substrato tenaz, optimizador para corte continuo, ligero y pesado

- Recubrimiento lubricativo → mejora la resistencia al filo de aportación

#### Inhibición de filo de aportación y daño del filo

NC9125 (M25)

Competidor (M25)

- Recubrimiento con buena resistencia a fracturación y sustrato tenaz → disminuye la aparición de desgaste en entalla

#### Inhibición de desgastes en entalla y en superficie del inserto

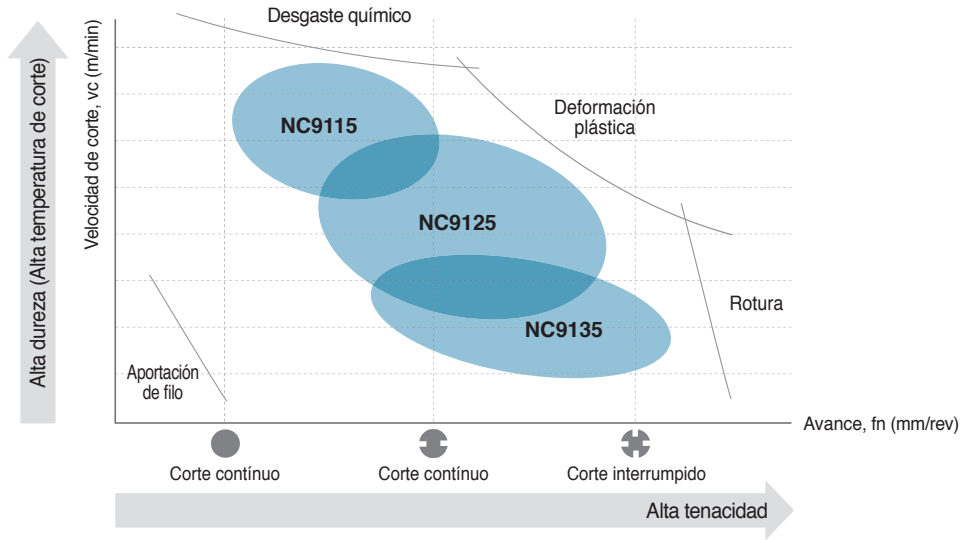

NC9135 (M35)

Competidor (M35)

## Recubrimiento CVD

### ➤ Alineación grados

### ➤ Grados recomendados para maquinados de aceros inoxidables

#### [Austenítico]

| Grado  | Velocidad corte (m/min) |     |     |     |     |
|--------|-------------------------|-----|-----|-----|-----|
|        | 50                      | 100 | 150 | 200 | 250 |
| NC9115 |                         |     | 160 | 220 |     |
| NC9125 |                         |     | 150 | 200 |     |
| NC9135 |                         | 100 | 150 |     |     |

#### [Acero inoxidable duplex]

| Grado  | Velocidad corte (m/min) |     |     |     |     |
|--------|-------------------------|-----|-----|-----|-----|
|        | 50                      | 100 | 150 | 200 | 250 |
| NC9115 |                         |     | 120 | 160 |     |
| NC9125 |                         |     | 100 | 140 |     |
| NC9135 |                         | 60  | 100 |     |     |

#### [Ferrítico y martensítico]

| Grado  | Velocidad corte (m/min) |     |     |     |     |
|--------|-------------------------|-----|-----|-----|-----|
|        | 50                      | 100 | 150 | 200 | 250 |
| NC9115 |                         |     | 150 | 250 |     |
| NC9125 |                         |     | 120 | 220 |     |
| NC9135 |                         | 100 | 150 |     |     |

#### [Inoxidable endurecido por precipitación]

| Grado  | Velocidad corte (m/min) |     |     |     |     |
|--------|-------------------------|-----|-----|-----|-----|
|        | 50                      | 100 | 150 | 200 | 250 |
| NC9115 |                         | 50  | 110 |     |     |
| NC9125 |                         | 40  | 110 |     |     |
| NC9135 |                         | 30  | 100 |     |     |

**Sistema de seleccion de grados CVD**

| Pieza de trabajo | Tipo de maquinado  | Grado recomendado     | Velocidad de corte recomendada (m/min) | ISO             | Rango de aplicación     |                         |
|------------------|--------------------|-----------------------|--|-----------------|-------------------------|-------------------------|
| <b>P</b>         | Acero              | Corte continuo        | NC3215                                 | 295 (170 ~ 420) | P10                     |                         |

## Ejemplos de aplicaciones (NC3215/NC3225)

### P Acero al carbono (SM20C)

- **Pieza de trabajo** Parte de sistema para combustible
- **Condiciones de corte**  $vc$  (m/min) = 250~380,  $fn$  (mm/rev) = 0.2~0.3  
 $ap$  (mm) = 1.5~2.0, con refrigerante
- **Denominación** Inserto : CNMG120412-MP (NC3215)  
Porta : PCLNL2525-M12

#### ■ Resultado de la prueba

### P Acero aleado (SNCM, Fundición)

- **Pieza de trabajo** Parte de motor
- **Condiciones de corte**  $vc$  (m/min) = 100,  $fn$  (mm/rev) = 0.15  
 $ap$  (mm) = 3.0, con refrigerante
- **Denominación** Inserto : CNMG120408-MP (NC3225)  
Porta : PCLNR2525-M12

#### ■ Resultado de la prueba

### P Acero al carbono (SM40C, forja en frío)

- **Pieza de trabajo** Parte sistema dirección
- **Condiciones de corte**  $vc$  (m/min) = 170,  $fn$  (mm/rev) = 0.3  
 $ap$  (mm) = 2.7~3.0, con refrigerante
- **Denominación** Inserto : DNMG150408-MP (NC3215)  
Porta : DDJNL2525-M15

#### ■ Resultado de la prueba

### P Acero al carbono (S55CR, forjado en caliente)

- **Pieza de trabajo** Parte sistema dirección
- **Condiciones de corte**  $vc$  (m/min) = 230,  $fn$  (mm/rev) = 0.3  
 $ap$  (mm) = 0.5~1.5, con refrigerante
- **Denominación** Inserto : CNMG120408-MP (NC3225)  
Porta : PCLNL2525-M12

#### ■ Resultado de la prueba

### P Acero al carbono (SM45C, forja en frío)

- **Pieza de trabajo** Parte sistema dirección
- **Condiciones de corte**  $vc$  (m/min) = 200~250,  $fn$  (mm/rev) = 0.25~0.35  
 $ap$  (mm) = 1.0~2.0, con refrigerante
- **Denominación** Inserto : DNMG150612-LP (NC3215)  
Porta : DDJNL2525-M15

#### ■ Resultado de la prueba

### P Acero aleado (SCR420, forja en frío)

- **Pieza de trabajo** Parte transmisión
- **Condiciones de corte**  $vc$  (m/min) = 160,  $fn$  (mm/rev) = 0.13  
 $ap$  (mm) = 1.0, con refrigerante
- **Denominación** Inserto : DNMG150608-LP (NC3225)  
Porta : DDJNL2525-M15

#### ■ Resultado de la prueba

Ejemplos de aplicaciones (NC3225)

**P** Acero aleado (SCR420H, forjado en caliente)

■ **Condiciones de corte**  $vc$  (m/min) = 360~430,  $fn$  (mm/rev) = 0.2  
 $ap$  (mm) = 1.2~1.5 (maquinado externo/frente), con refrigerante

■ **Denominación** Inserto : CNMG120408-VB (NC3225)  
Porta : PCLNR2225-M12

■ **Resultado de la prueba**

**P** Acero al carbono (S48C, forja en frío)

■ **Condiciones de corte**  $vc$  (m/min) = 280,  $fn$  (mm/rev) = 0.2~0.25  
 $ap$  (mm) = 1, sin refrigerante

■ **Denominación** Inserto : CNMG120412-VB (NC3225)  
Porta : PCLNR2525-M12

■ **Resultado de la prueba**

**P** Acero aleado (SCM420H, forjado en caliente)

■ **Condiciones de corte**  $vc$  (m/min) = 80~500  
 $fn$  (mm/rev) = 0.15~0.3 (Maquinado exterior/frente/ranurado/grabación),  $ap$  (mm) = 0.7~1.5, con refrigerante

■ **Denominación** Inserto : DNMG150608-VB (NC3225)  
Porta : PDJNR2525-M15

■ **Resultado de la prueba**

**P** Acero al carbono (SM53C, forja en frío)

■ **Condiciones de corte**  $vc$  (m/min) = 280  
 $fn$  (mm/rev) = 0.2~0.25 (Maquinado exterior / Maquinado interior),  $ap$  (mm) = 1, sin refrigerante

■ **Denominación** Inserto : DNMG150608-VB (NC3225)  
Porta : PDJNR2525-M15

■ **Resultado de la prueba**

**P** Acero aleado (series SCR, forja en frío)

■ **Condiciones de corte**  $vc$  (m/min) = 314  
 $fn$  (mm/rev) = 0.25 (Maquinado exterior/frente)  
 $ap$  (mm) = 1, con refrigerante

■ **Denominación** Inserto : CNMG120408-VM (NC3225)  
Porta : PCLNR2525-M12

■ **Resultado de la prueba**

## Ejemplos de aplicaciones (NC6310)

### K Fundición dúctil (GCD500)

- **Pieza de trabajo** Volante
- **Condiciones de corte**  $vc$  (m/min) = 450,  $n$  (rpm) = 550,  $fn$ (mm/rev) = 0.3,  $ap$  (mm) = 2, sin refrigerante
- **Denominación** Inserto : CNMA120412 (NC6310)  
Porta : DCLNR2525

#### ■ Resultado de la prueba

### K Fundición gris (GC250D)

- **Pieza de trabajo** Disco de freno
- **Condiciones de corte**  $vc$  (m/min) = 550,  $n$  (rpm) = 547,  $fn$ (mm/rev) = 0.3,  $ap$  (mm) = 1, sin refrigerante
- **Denominación** Inserto : CNMG120412-RK (NC6310)  
Porta : DCLNR2525

#### ■ Resultado de la prueba

### K Fundición gris (GC250D)

- **Pieza de trabajo** Camisa de cilindro
- **Condiciones de corte**  $vc$  (m/min) = 450,  $n$  (rpm) = 1100,  $fn$ (mm/rev) = 0.25,  $ap$  (mm) = 1.5, sin refrigerante
- **Denominación** Inserto : CNMA120408 (NC6310)  
Porta : DCLNR2525

#### ■ Resultado de la prueba

### K Fundición gris (GC300D)

- **Pieza de trabajo** Caja del volante
- **Condiciones de corte**  $vc$  (m/min) = 560,  $n$  (rpm) = 298,  $fn$ (mm/rev) = 0.3,  $ap$  (mm) = 1, con refrigerante
- **Denominación** Inserto : CNMG120412-RK (NC6310)  
Porta : DCLNR2525

#### ■ Resultado de la prueba

Ejemplos de aplicaciones (NC6315)

**K Fundición dúctil (GCD500)**

- **Pieza de trabajo** Cubo
- **Condiciones de corte**  $vc$  (m/min) = 320,  $n$  (rpm) = 318,  $fn$ (mm/rev) = 0.4,  $ap$  (mm) = 2, con refrigerante
- **Denominación** Inserto : WNMG080412-RK (NC6315)  
Porta : DCLNR2525

■ **Resultado de la prueba**

**K Fundición dúctil (GCD500)**

- **Pieza de trabajo** Volante
- **Condiciones de corte**  $vc$  (m/min) = 400,  $n$  (rpm) = 398,  $fn$ (mm/rev) = 0.3,  $ap$  (mm) = 2, con refrigerante
- **Denominación** Inserto : CNMA120408 (NC6315)  
Porta : DCLNR2525

■ **Resultado de la prueba**

**K Fundición dúctil (GCD700)**

- **Pieza de trabajo** Caja diferencial
- **Condiciones de corte**  $vc$  (m/min) = 360,  $n$  (rpm) = 716,  $fn$ (mm/rev) = 0.25,  $ap$  (mm) = 1.5, con refrigerante
- **Denominación** Inserto : CNMG120408-MK (NC6315)  
Porta : DCLNR2525

■ **Resultado de la prueba**

**K Fundición dúctil (GCD500)**

- **Pieza de trabajo** Parte dirección
- **Condiciones de corte**  $vc$  (m/min) = 200,  $n$  (rpm) = 1100,  $fn$ (mm/rev) = 0.25,  $ap$  (mm) = 2, con refrigerante
- **Denominación** Inserto : DNMG150608-MK (NC6315)  
Porta : DDJLNR2525

■ **Resultado de la prueba**

## Ejemplos de aplicaciones (serie NC9100)

### M Inoxidable (STS304)

- **Pieza de trabajo** Parte componente hidráulico (sello mecánico)
- **Condiciones de corte**  $vc$  (m/min) = 140,  $fn$  (mm/rev) = 0.28  
 $ap$  (mm) = 3.0, con refrigerante
- **Denominación** Inserto: CNMG120408-MM (NC9125)  
Porta : S32S-PCLCR-12

#### ■ Resultado de la prueba

### M Inoxidable (STS304)

- **Pieza de trabajo** Parte válvula, pistón
- **Condiciones de corte**  $vc$  (m/min) = 140,  $fn$  (mm/rev) = 0.28  
 $ap$  (mm) = 3.0, con refrigerante
- **Denominación** Inserto: CNMG120408-MM (NC9125)  
Porta : DCLNL2525-M12

#### ■ Resultado de la prueba

### M Inoxidable (STS317L)

- **Pieza de trabajo** Parte componente eólico, brida (planta offshore)
- **Condiciones de corte**  $vc$  (m/min) = 150,  $fn$  (mm/rev) = 0.3~0.5  
 $ap$  (mm) = 4.0~6.0, con refrigerante
- **Denominación** Inserto: CNMG160616-MM (NC9125)  
Porta : PCLNR3232-P16

#### ■ Resultado de la prueba

### M Inoxidable (STS316)

- **Pieza de trabajo** Parte componente eólico, brida (planta offshore)
- **Condiciones de corte**  $vc$  (m/min) = 175,  $fn$  (mm/rev) = 0.3~0.8  
 $ap$  (mm) = 0.5, con refrigerante
- **Denominación** Inserto: TNMG220416-RM (NC9135)  
Porta : PTFNR3232-P22

#### ■ Resultado de la prueba

### M Inoxidable (Súper dúplex)

- **Pieza de trabajo** Parte de planta (reborde, brida)
- **Condiciones de corte**  $vc$  (m/min) = 100,  $fn$  (mm/rev) = 0.5  
 $ap$  (mm) = 3, con refrigerante
- **Denominación** Inserto: CNMG160616-MM (NC9125)  
Porta : PCLNR323-P16

#### ■ Resultado de la prueba

### M Inoxidable (Dúplex)

- **Pieza de trabajo** Parte componente hidráulico
- **Condiciones de corte**  $vc$  (m/min) = 120,  $fn$  (mm/rev) = 0.4  
 $ap$  (mm) = 6, con refrigerante
- **Denominación** Inserto: CNMG160616-RM (NC9125)  
Porta : DCLNR3232-P16

#### ■ Resultado de la prueba

# Recubrimiento PVD

## Recubrimiento PVD para acero inoxidable y HRSA

### PC8105

- Sustrato ultra fino para mayor resistencia al desgaste y al astillamiento en filo
- Excelente tecnología de recubrimiento PVD con alta dureza y resistencia a la oxidación a altas temperaturas
- Mayor duración de la herramienta en el mecanizado y acabado a alta velocidad de aleaciones resistentes al calor y acero inoxidable

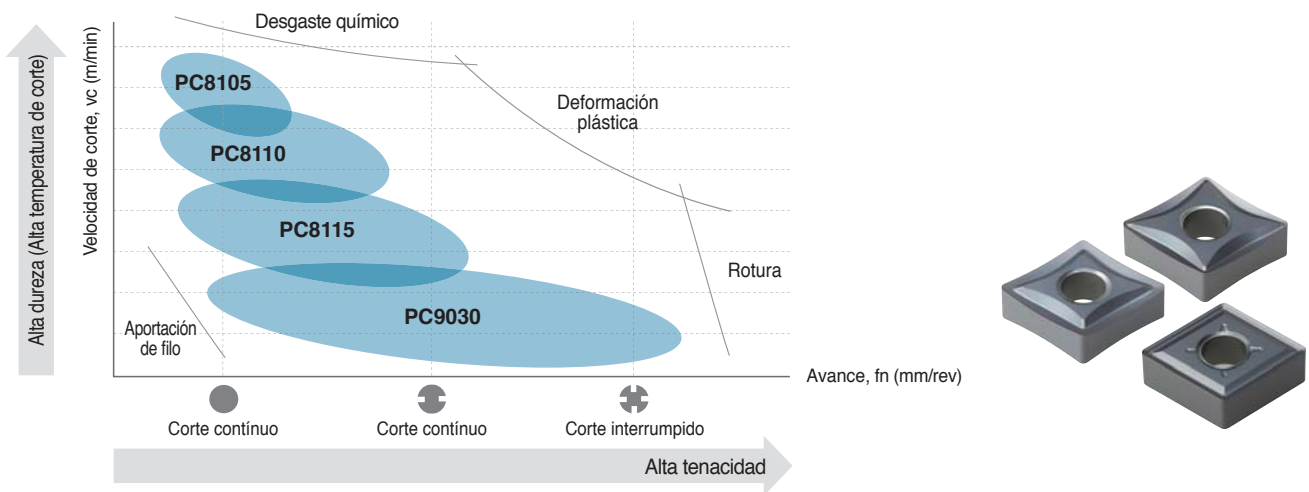

### PC8110

- Sustrato con excelente resistencia al desgaste y resistencia a la deformación plástica a altas temperaturas
- Excelente tecnología de recubrimiento PVD con alta dureza y resistencia a la oxidación a altas temperaturas
- Mayor vida de la herramienta en el mecanizado a alta velocidad de aleaciones resistentes al calor y acero inoxidable

### PC8115

- Matriz de grano ultra fino para mejorar la resistencia al desgaste y al astillamiento
- Excelente tecnología de recubrimiento PVD con alta dureza y resistencia a la oxidación a altas temperaturas
- Mecanizado estable con filos de corte fuertes y excelente resistencia al astillamiento
- Mayor duración de la herramienta en mecanizado a velocidad baja/media y desbaste medio de aleaciones termorresistentes y acero inoxidable

### ➤ Alineación grados

### ➤ Características de los grados PC8100

- El desgaste a alta temperatura se evita mediante la película de recubrimiento con excelente acabado superficial, alta dureza y resistencia a la oxidación
- Mejora la resistencia al desgaste para igualar la matriz de grano ultrafino y mejora la estabilidad entre los vértices del inserto, el astillamiento y la resistencia al desgaste

**Tecnología de tratamiento de superficies de recubrimiento (Fotos de la capa de recubrimiento)**

suave superficie de recubrimiento

serie PC8100

Aspera superficie de recubrimiento

Recubrimiento convencional

**Tecnología de recubrimiento Resistente a la Oxidación (Imágenes de capa de revestimiento tratadas térmicamente a 900°C)**

Se evita la oxidación

serie PC8100

Oxidación generada fácilmente

Competidor

## ☞ Características de los grados PVD

| Grados PVD | ISO  | Características   |
|------------|--|---|
| PC8105     | M05 ~ M15<br>S01 ~ S10<br>H01 ~ H05              | <ul style="list-style-type: none"> <li>• Para corte continuo y a alta velocidad de HRSA e inoxidable</li> <li>• Excelente rendimiento gracias a su elevada resistencia al desgaste y a su resistencia a la oxidación</li> <li>• Substrato con grano ultra fino y recubrimiento TiAlN</li> </ul>   |
| PC8110     | M10 ~ M20<br>K10 ~ K20<br>S05 ~ S15<br>H05 ~ H10 | <ul style="list-style-type: none"> <li>• Alta Velocidad y mecanizado continuo en acero inoxidable &amp; HRSA</li> <li>• Alto astillamiento y mayor duración de la herramienta</li> <li>• Nuevo revestimiento de TiAlN de grano ultra fino substrato aprobado</li> </ul>   |
| PC8115     | M15 ~ M25<br>S10 ~ S20<br>H10 ~ H15              | <ul style="list-style-type: none"> <li>• Para corte continuo e interrupción media y a media velocidad de HRSA e inoxidable</li> <li>• Excelente rendimiento gracias a su elevada resistencia al desgaste y a su resistencia a la oxidación</li> <li>• Substrato con grano ultra fino y recubrimiento TiAlN</li> </ul>                       |
| PC5300     | P30 ~ P40<br>M20 ~ M30<br>K20 ~ K25<br>S15 ~ S25 | <ul style="list-style-type: none"> <li>• Grado universal de acero inoxidable, HRSA, acero y fundición en corte interrumpido</li> <li>• Alto astillamiento y mayor duración de la herramienta</li> <li>• Nuevo revestimiento de TiAlN de grano ultra fino substrato aprobado</li> </ul>  |
| PC9030     | M25 ~ M35  | <ul style="list-style-type: none"> <li>• Medio, desbaste y corte interrumpido pesado de acero inoxidable</li> <li>• TiAlN revestimiento y de grano ultra fino substrato aprobado</li> <li>• Alto astillamiento y resistencia para el mecanizado</li> </ul>  |
| PC5400     | P35 ~ P45<br>M30 ~ M40<br>K30 ~ K35<br>S25 ~ S35 | <ul style="list-style-type: none"> <li>• Para corte medio de materiales de difícil corte, acero inoxidable, acero y fundición a velocidad media o baja</li> <li>• Mecanizabilidad estable con resistencia al astillado, la rotura y la soldadura en frío</li> <li>• Substrato ultrafino con alta tenacidad y nueva capa de AlCrN</li> </ul> |

Ejemplos de aplicaciones (PC8105/PC8110/PC8115)

**S Inconel 718**

■ **Condiciones de corte**  $vc$  (m/min) = 50  
 $fn$  (mm/rev) = 0.15  
 $ap$  (mm) = 0.5, con refrigerante

■ **Denominación** Inserto : CNMG120408-VP3 (PC8105)  
 Porta : PCLNR2525-M12

■ **Resultado de la prueba**

**S Inconel 718**

■ **Condiciones de corte**  $vc$  (m/min) = 50  
 $fn$  (mm/rev) = 0.15  
 $ap$  (mm) = 1.5, con refrigerante

■ **Denominación** Inserto : CNMG120408-VP3 (PC8115)  
 Porta : PCLNR2525-M12

■ **Resultado de la prueba**

**M Inoxidable (STS316L)**

■ **Condiciones de corte**  $vc$  (m/min) = 80  
 $fn$  (mm/rev) = 0.2  
 $ap$  (mm) = 7.0, con refrigerante

■ **Denominación** Inserto : CNMG120408-VP3 (PC8115)  
 Porta : PCLNR2525-M12

■ **Resultado de la prueba**

**S Inconel 625**

■ **Condiciones de corte**  $vc$  (m/min) = 60  
 $fn$  (mm/rev) = 0.2  
 $ap$  (mm) = 2, con refrigerante

■ **Denominación** Inserto : DNMG150608-MM (PC8110)  
 Porta : DDLNL2525-MS15

■ **Resultado de la prueba**

## Grados de carburo sin recubrimiento

### Grados de carburo sin recubrir para torneado de titanio

#### H01

- Resistencia al desgaste mejorada y a la fractura mejorada con el uso de un sustrato ultrafino
- Resistencia al filo de adicción y al astillamiento gracias a su superficie pulida y al uso de los rompe virutas positivos VP
- Excelente vida útil en el acabado de titanio a velocidades altas

#### H05

- Primera recomendación para maquinado de titanio en diferentes condiciones de corte
- Resistencia al filo de adicción y al astillamiento gracias a su superficie pulida y al uso de los rompe virutas VP con un filo de corte muy positivos
- Excelente vida útil en maquinado medio de titanio

### ➤ Alineación grados

### ➤ Sistema de selección de grados sin recubrimiento

| Pieza de trabajo         | Grado recomendado | Condición de corte recomendada (m/min) | ISO | Rango de Aplicación |
|--------------------------|-------------------|--|-----|---------------------|
| P Acero                  | ST10              | 110 (70 ~ 140)                         | P10 | ST10                |
|                          | ST20              | 80 (50 ~ 110)                          | P20 | ST20                |
|                          | ST30A             | 70 (40 ~ 90)                           | P30 | ST30A               |
| M Acero Inoxidable       | U20               | 70 (40 ~ 90)                           | M25 | U20                 |
| K Fundición              | H01               | 105 (60 ~ 140)                         | K01 | H01                 |
|                          | H05               | 105 (60 ~ 140)                         | K10 | H05                 |
|                          | G10               | 90 (50 ~ 120)                          | K20 | G10                 |
| N Aleaciones de aluminio | H01               | 600 (450 ~ 750)                        | N10 | H01                 |
| N Aleaciones de cobre    | H05               | 425 (320 ~ 530)                        | N20 | H05                 |
| S Aleación de titanio    | H01               | 55 (40 ~ 70)                           | S01 | H01                 |
|                          | H05               | 50 (35 ~ 65)                           | S10 | H05                 |
| H Acero de alta dureza   | H01               | 80 (55 ~ 105)                          | H10 | H01                 |

### ➤ Aplicación Principal

| Pieza de trabajo | Composición   | Características   | Pieza de trabajo  |
|------------------|---------------|---|---|
| P                | WC-TiC-TaC-Co | Excelente resistencia al choque térmico y a la deformación plástica | Acero al carbon, Aleación de Acero, Acero Inoxidable                |
| M                | WC-TiC-TaC-Co | Grados de aplicación con excelente resistencia al choque térmico    | Acero al carbon, Aleación de Acero, Acero Inoxidable, Acero fundido |
| K                | WC-Co         | Grados duros y fuertes  | Fundición, Metales No-Ferrosos, Plásticos, Acrílico, etc            |
| S                | WC-Co         | Excelente resistencia al desgaste y al despostillamiento            | Aleación de titanio   |

**Propiedades físicas de los grados de carburo sin recubrimiento**

| Pieza de trabajo | Grado | Dureza (HRA) | TRS (kgf/mm <sup>2</sup> ) | Modulo de Young's (10 <sup>3</sup> kgf/mm <sup>2</sup> ) | Expansión Térmica coeficient (10 <sup>-6</sup> /°C) | Conductividad Térmica (cal/cm · sec·°C) |
|------------------|-------|--------------|----------------------------|--|---|---|
| <b>P</b>         | ST10  | 92.1         | 175                        | 48   | 6.2   | 25                                      |

## Grados Cermet

### Solución para torneado de acero

## CN1500

- Para maquinado continuo de acero forjado en frío o caliente y acero sintetizado a alta velocidad de corte y baja profundidad de corte
- Excelente resistencia al desgaste y resistencia al desgaste en la cara del inserto
- Rugosidad en superficie mejorada gracias a la optimización de los filos de corte

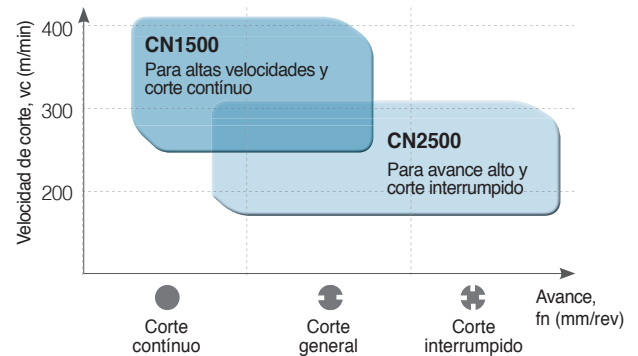

## CN2500

- Para maquinado con interrupción de acero forjado en frío o caliente y acero sintetizado a alta velocidad de corte y baja profundidad de corte
- Excelente resistencia al astillamiento, a la fractura y a la fractura térmica
- Rugosidad en superficie mejorada gracias a la optimización de los filos de corte

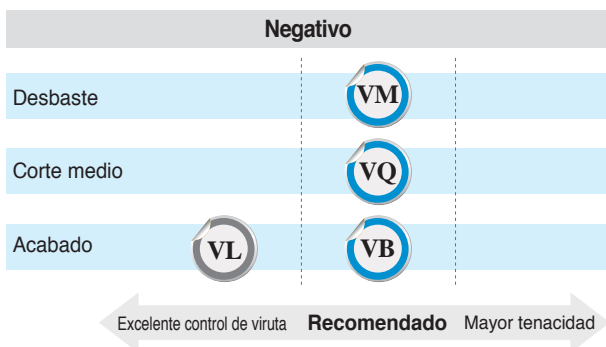

### Condiciones de corte recomendadas

| Tipo     | Material                                | Grado  | Velocidad de corte recomendada (m/min) |             |        |
|----------|---|--------|--|-------------|--------|
|          |   |        | Mínima                                 | Recomendada | Máxima |
| Torneado | SM10C, SS440                            | CN1500 | 150                                    | 270         | 400    |
|          |   | CN2500 | 130                                    | 240         | 350    |
|          | SM45C                                   | CN1500 | 150                                    | 250         | 350    |

# Grados cermet con recubrimiento

Grados cermet para maquinado de acero al carbono, acero aleador y acero sintetizado

## CC1500 **new**

- Resistencia maximizada al filo de adicción y al desgaste por oxidación en corte continuo, altas velocidades de corte y baja profundidad de corte
- Muy buena resistencia al desgaste en comparación con grados existentes en corte continuo de acero al carbono y aleaciones de acero

## CC2500 **new**

- Resistencia maximizada al filo de adicción y al desgaste por oxidación en corte interrumpido, altas velocidades de corte y baja profundidad de corte
- Resistencia superior al impacto en corte con interrupción en torneado de acero al carbono y aleaciones de acero

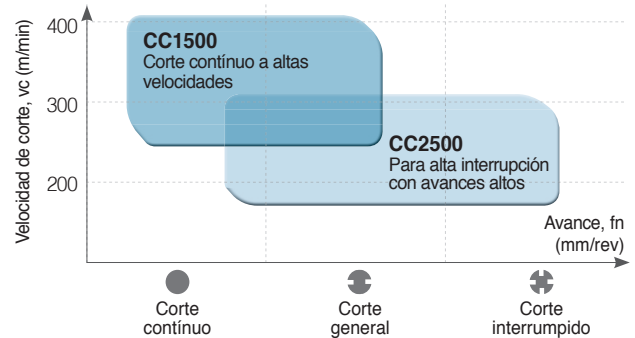

### Características

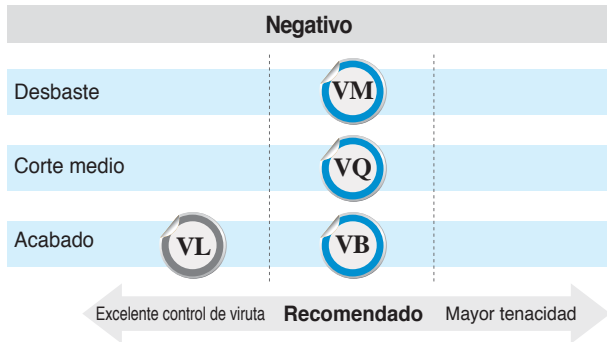

### Condiciones de corte recomendadas

| Tipo     | Material                                | Grado  | Velocidad de corte recomendada (m/min) |             |        |
|----------|---|--------|--|-------------|--------|
|          |   |        | Mínima                                 | Recomendada | Máxima |
| Torneado | SM10C, SS440                            | CN1500 | 200                                    | 350         | 450    |
|          |   | CN2500 | 180                                    | 290         | 400    |
|          | SM45C                                   | CN1500 | 200                                    | 300         | 400    |

## Ejemplos de aplicaciones (CC1500)

### P Acero al carbono (SM20C)

- **Pieza de trabajo** Engrasador
- **Condiciones de corte**  $vc$  (m/min) = 170,  $n$  (rpm) = 2,000  
 $fn$  (mm/rev) = 0.12,  $ap$  (mm) = 0.12  
con refrigerante
- **Denominación** Inserto : TPMT110304-MP (CC1500)  
Porta : S20R-STWPR-11

#### ■ Resultado de la prueba

### P Acero aleado (SCM440)

- **Pieza de trabajo** Plato de carga
- **Condiciones de corte**  $vc$  (m/min) = 450,  $n$  (rpm) = 2,500  
 $fn$  (mm/rev) = 0.2,  $ap$  (mm) = 0.2  
con refrigerante
- **Denominación** Inserto : DCMT11T304-MP (CC1500)  
Porta : SDJCR2525M11

#### ■ Resultado de la prueba

### P Acero al carbono (SM45C)

- **Pieza de trabajo** Plato de carga abierto
- **Condiciones de corte**  $vc$  (m/min) = 300,  $n$  (rpm) = 2,500  
 $fn$  (mm/rev) = 0.3,  $ap$  (mm) = 0.4  
con refrigerante
- **Denominación** Inserto : CCMT09T304-C25 (CC1500)  
Porta : SCACR1212-F09

#### ■ Resultado de la prueba

### P Acero aleado (SCM420)

- **Pieza de trabajo** Piñón
- **Condiciones de corte**  $vc$  (m/min) = 250,  $n$  (rpm) = 2,500  
 $fn$  (mm/rev) = 0.2,  $ap$  (mm) = 0.5  
con refrigerante
- **Denominación** Inserto : DNMG150604-VL (CC1500)  
Porta : PDJNR2525-M15

#### ■ Resultado de la prueba

### P Forjado caliente (SCM430)

- **Pieza de trabajo** Válvula
- **Condiciones de corte**  $vc$  (m/min) = 230,  $fn$  (mm/rev) = 0.8  
 $ap$  (mm) = 0.12, con refrigerante
- **Denominación** Inserto : TNMG160404-VQ (CC1500)  
Porta : PTTNR1616-H16

#### ■ Resultado de la prueba

### P Materiales ferrosos sintetizados

- **Pieza de trabajo** Engranaje
- **Condiciones de corte**  $vc$  (m/min) = 160,  $fn$  (mm/rev) = 0.17  
 $ap$  (mm) = 0.2, con refrigerante
- **Denominación** Inserto : SNMG120408-VM (CC1500)  
Porta : MSKNR3232-P12

#### ■ Resultado de la prueba

Ejemplos de aplicaciones (CC2500)

**P** Acero al carbono (SM45C)

- **Pieza de trabajo** Plato de choque
- **Condiciones de corte**  $vc$  (m/min) = 250,  $n$  (rpm) = 890  
 $fn$  (mm/rev) = 0.06,  $ap$  (mm) = 0.1  
con refrigerante
- **Denominación** **Inserto** : DNMG110404-VQ (CC2500)  
**Porta** : SDJCR2525-M11
- **Resultado de la prueba**

**K** Fundición dúctil (FCD400)

- **Pieza de trabajo** Caja diferencial
- **Condiciones de corte**  $vc$  (m/min) = 150,  $n$  (rpm) = 600  
 $fn$  (mm/rev) = 0.15,  $ap$  (mm) = 0.3  
con refrigerante
- **Denominación** **Inserto** : VBMT160404-MP (CC2500)  
**Porta** : SVJBR2525-M16
- **Resultado de la prueba**

**P** Acero al carbono (SM35C)

- **Pieza de trabajo** Pistón
- **Condiciones de corte**  $vc$  (m/min) = 122,  $n$  (rpm) = 4,800  
 $fn$  (mm/rev) = 0.15,  $ap$  (mm) = 2.0  
con refrigerante
- **Denominación** **Inserto** : DNMG150604-VM (CC2500)  
**Porta** : MDQNR2525-M15
- **Resultado de la prueba**

**P** Acero aleado (SCM420)

- **Pieza de trabajo** Biela
- **Condiciones de corte**  $vc$  (m/min) = 340,  $n$  (rpm) = 2,100  
 $fn$  (mm/rev) = 0.15,  $ap$  (mm) = 0.07  
con refrigerante
- **Denominación** **Inserto** : TPMT110304-MP (CC2500)  
**Porta** : S10M-STFPR-11
- **Resultado de la prueba**

**P** Acero aleado (SCM415)

- **Pieza de trabajo** Cojinete para engranaje
- **Condiciones de corte**  $vc$  (m/min) = 314,  $n$  (rpm) = 3,500  
 $fn$  (mm/rev) = 1,  $ap$  (mm) = 0.2  
con refrigerante
- **Denominación** **Inserto** : CNMG120408-VQ (CC2500)  
**Porta** : MCLNR2525-M12
- **Resultado de la prueba**

**P** Acero aleado (SWCH18A)

- **Pieza de trabajo** Eje
- **Condiciones de corte**  $vc$  (m/min) = 367,  $n$  (rpm) = 5,800  
 $fn$  (mm/rev) = 0.02,  $ap$  (mm) = 1.55  
con refrigerante
- **Denominación** **Inserto** : TBT4405R-D38-R0.25 (CC2500)  
**Porta** : TBH425-45R
- **Resultado de la prueba**

### Rango de aplicación de grados de fresado

# Recubrimiento CVD

Solución de Fresado para Acero y Fundición

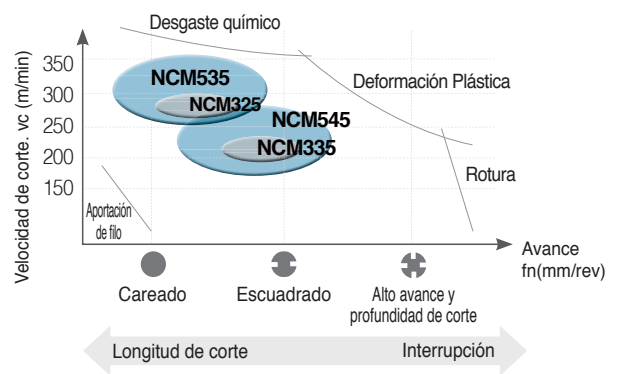

## NCM535 <sup>new</sup> / NCM545 <sup>new</sup>

- Mejor resistencia al astillado, resistencia al calor y al agrietamiento: gracias al tratamiento aplicado al recubrimiento
- Mejora la resistencia al desgaste y al calor: sustrato de alta tenacidad y alúmina CVD de alta funcionalidad

### Características

### Alineación grados

### Sistema de selección de grados con recubrimiento CVD

## Ejemplos de aplicaciones (NCM535/NCM545)

### P SS41(SS400)

- **Pieza de trabajo** Excavadora
- **Condiciones de corte**  $vc(m/min) = 350$ ,  $fz(mm/t) = 0.12$ ,  $ap(mm) = 2.0$ , Diámetro:  $\varnothing 250$
- **Denominación** Inserto : SNMX1507ENN-MM

#### ■ Resultado de la prueba

### P API X83

- **Pieza de trabajo** Tubo de Acero. Tubo t 12.5
- **Condiciones de corte**  $vf(m/min) = 3$ ,  $ap(mm) = 6\sim 12$  ( $\varnothing 850$ , 65t)
- **Denominación** Inserto : TPEW3106ZS-IN

#### ■ Resultado de la prueba

### P API X55

- **Pieza de trabajo** Tubo de Acero,  $\varnothing 60.3$ , 4.7t
- **Condiciones de corte**  $n(rpm) = 350\sim 450$ ,  $fn(mm/rev) = 0.6$ ,  $ap(mm) = 2\sim 4$
- **Denominación** Inserto : TPKR2204PDR-MX

#### ■ Resultado de la prueba

### P SCM440

- **Pieza de trabajo** Partes grandes de buque
- **Condiciones de corte**  $vc(m/min) = 73.4$ ,  $fn(mm/rev) = 1.5$ ,  $ap(mm) = 1\sim 40$
- **Denominación** Inserto : SDMT090308-MM

#### ■ Resultado de la prueba

### P Acero

- **Pieza de trabajo** Tubo
- **Condiciones de corte**  $vc(m/min) = 150$ , Plano único
- **Denominación** Inserto : WNMX251220-X373

#### ■ Resultado de la prueba

### P PL-52-LHRE 145660

- **Pieza de trabajo** Oleoducto, Tubo t: 9.15
- **Condiciones de corte**  $vc(m/min) = 280$ ,  $vf(m/min) = 24$ ,  $ap(mm) = 3.2\sim 5.9$
- **Denominación** Inserto : LNMN500604

#### ■ Resultado de la prueba

# Recubrimiento PVD

## Grados PVD para acabado de aceros templados y endurecidos

### PC2005 / PC2010 / PC2015

- Grados para acabado de aceros para herramientas y aceros para moldes de plástico
- PC2005: grado con un sustrato y recubrimiento de muy alta dureza
- PC2010: grado con filos de corte endurecidos, ideal para aceros pre-endurecidos y corte interrumpido
- PC2015: para acero al carbono y maquinado de fundición, con también buen desempeño en materiales difíciles de cortar

#### Guía de aplicación según material

#### Características

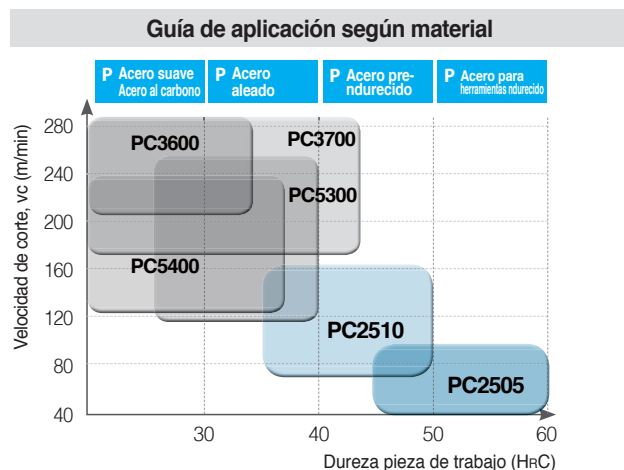

- Se aplicó un recubrimiento de protección térmica para evitar grietas térmicas.
- El WC ultrafino se combinó con cobalto de alto contenido para optimizarlo para mecanizado de acero pre-endurecido.

## Grados PVD para desbaste de acero de alta dureza

### PC2505 <sup>new</sup> / PC2510 <sup>new</sup>

- Grados para desbaste de aceros endurecidos
- PC2505: excelente resistencia al desgaste, ideal para maquinado de aceros para moldes y acero endurecido por encima de los HrC50
- PC2510: tenacidad estabilizada, ideal para corte interrumpido con lubricante de acero templado y endurecido, resistiendo el choque de variación térmica

#### Guía de aplicación según material

#### Características

## Ejemplos de aplicaciones (PC2005/PC2010/PC2015)

### H Acero para herramientas (SKD11, tratado térmicamente)

- **Pieza de trabajo** Molde para prensa de piezas de automóvil
- **Condiciones de corte**  $vc$  (m/min) = 377,  $fz$  (mm/t) = 0.5  
 $ap$  (mm) = 0.5,  $ae$  (mm) = 0.2, sin refrigerante
- **Denominación** Inserto : LBH250-KH (PC2005)  
Porta : LBE250140S-S25C

#### ■ Resultado de la prueba

### P Acero para moldes (KP4M)

- **Pieza de trabajo** Molde para prensa de piezas de automóvil
- **Condiciones de corte**  $vc$  (m/min) = 200,  $fz$  (mm/t) = 0.1  
 $ap$  (mm) = 0.1~0.5,  $ae$  (mm) = 0.1~0.5, con refrigerante
- **Denominación** Inserto : LBH160-KH (PC2010)  
Porta : LBE160100S-S16C

#### ■ Resultado de la prueba

### P Acero al carbono (SM53C)

- **Pieza de trabajo** Eje de unión
- **Condiciones de corte**  $vc$  (m/min) = 200,  $fz$  (mm/t) = 0.25  
 $ap$  (mm) = 0.5~2.0,  $ae$  (mm) = 0.5~1.0, sin refrigerante
- **Denominación** Inserto : LBH230-KF (PC2015)  
Porta : LBE230-HSKC63

#### ■ Resultado de la prueba

## Ejemplos de aplicaciones (PC2505/PC2510)

### H Acero para herramientas (SKD11, tratado térmicamente)

- **Condiciones de corte**  $vc$  (m/min) = 80,  $fz$  (mm/t) = 0.5  
 $ap$  (mm) = 0.3,  $ae$  (mm) = 10, sin refrigerante
- **Denominación** Inserto : LPEW040210R (PC2505)  
Porta : HFMS1010HR-2S10

#### ■ Resultado de la prueba

### H Acero para herramientas (SKD11, tratado térmicamente)

- **Condiciones de corte**  $vc$  (m/min) = 30,  $fz$  (mm/t) = 0.4  
 $ap$  (mm) = 0.7,  $ae$  (mm) = 40, sin refrigerante
- **Denominación** Inserto : RPMW1204MOS1 (PC2510)  
Porta : FMRPS4050HRP-4M40

#### ■ Resultado de la prueba

# Grado de recubrimiento PVD

## Grado especializado en el fresado de acero

# PC3700 **new**

- Excelente tasa de eliminación de virutas gracias a un sustrato resistente especialmente diseñado para acero y un recubrimiento PVD altamente lubricativo y de alta dureza
- Grado de alta resistencia al astillado para minimizar la desviación y extender la vida útil de la herramienta en diversas condiciones de corte

### Características

- Superficie lisa y con buen acabado gracias al tratamiento especial de la superficie  
 → Buena evacuación de viruta, resistencia mejorada y muy buen acabado

#### Tratamiento especial de la superficie del recubrimiento

PC3700

Productos existentes

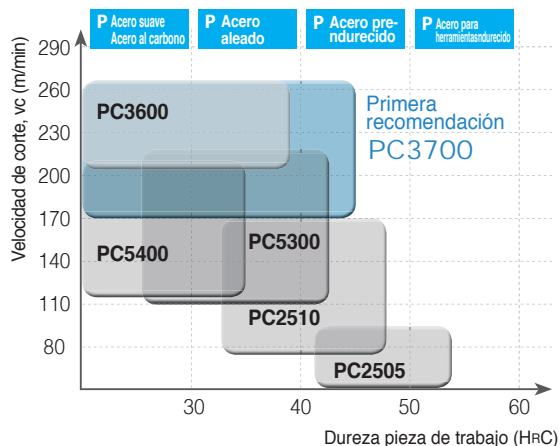

- Sustrato y recubrimiento PVD preparado para aplicaciones generales de fresado de acero

- Mayor resistencia al filo de aportación y al astillado gracias a la tecnología de recubrimiento multicapa que permite un recubrimiento de alta dureza y lubricativo.
- Garantizar la maquinabilidad general debido a materiales resistentes al desgaste y a la rotura optimizados para aplicaciones de fresado de acero.

### Rango de Aplicaciones

#### Grados recomendados y condiciones de corte para aplicaciones de fresado acero

## Grado de recubrimiento PVD

### Grado PVD universal

# PC5300

- Recubrimiento avanzado PVD con alta dureza y alta estabilidad a altas temperatura
- El sustrato altamente resistente y las películas de recubrimiento producen un excelente acabado superficial
- Capacidad de aplicación universal, cubriendo las áreas P, M, K, S con este único grado, PC5300
- Mecanizado estable gracias a la excelente dureza de los bordes y la resistencia al desconchado

### Características

- Última tecnología de revestimiento de PVD desarrollado por KORLOY
- nuevo concepto de recubrimiento equipado con alta oxidación y alta dureza

### Propiedades alta temperatura

# PC5400

- Nueva capa de recubrimiento PVD con alta tenacidad y lubricación
- Gran fuerza de adherencia entre el sustrato con alta tenacidad y la capa de recubrimiento
- La excelente fortaleza del filo de corte y la resistencia al astillado aseguran un mecanizado estable para P, M, K, S.

### Características

- Lubricación mejorada
- Alta tenacidad
- Adhesión fuerte
- Sustrato ultrafino de alta tenacidad

Creación de grietas en la superficie del recubrimiento después de dejar una muesca ejerciendo una carga de 60 kg

Recubrimiento normal

Recubrimiento de alta tenacidad

## Grado de recubrimiento PVD

Grado PVD optimizado para fresado intermedio a desbaste, de alta interrupción de acero inoxidable

### PC9540 **new**

- Mayor vida útil gracias a la mayor resistencia a la rotura conseguida gracias a un sustrato de alta tenacidad que controla el crecimiento de grietas
- Excelente recubrimiento dióxido de este nuevo grado PVD con resistencia a la oxidación y al calor superando el límite del mecanizado de aleaciones termorresistentes
- Maquinabilidad estable al evitar el astillamiento y la aparición del filo de aportación gracias al tratamiento especial de la superficie del recubrimiento

#### Características

- Acabado superficial mejorado → Buena resistencia al filo de aportación
- Multicapa PVD → Controlar el crecimiento de grietas
- Capa de dióxido de PVD → Buena resistencia a la oxidación y al calor
- Capa de nitruro de PVD → Buena resistencia al desgaste
- Sustrato de alta tenacidad → Buena resistencia a la rotura

Ejemplos de aplicaciones (PC5300)

**P** Acero para moldes (KP4M)

■ **Condiciones de corte**  $vc$  (m/min) = 250,  $fz$  (mm/t) = 1.0  
 $ap$  (mm) = 1.0, sin refrigerante

■ **Denominación** Inserto : WNMX130520ZNN-MM (PC5300)  
Fresa : HRMDCM13050HR-3

■ **Resultado de la prueba**

**M** Inoxidable (STS316)

■ **Condiciones de corte**  $vc$  (m/min) = 65,  $fz$  (mm/t) = 0.14  
 $ap$  (mm) = 3.0, con refrigerante

■ **Denominación** Inserto : SEET14M4AGSN-MM (PC5300)  
Fresa : FMACM4100HR

■ **Resultado de la prueba**

Ejemplos de aplicaciones (PC5400)

**P** Acero al carbono (SM45C)

■ **Condiciones de corte**  $vc$  (m/min) = 250,  $fz$  (mm/t) = 1.2  
 $ap$  (mm) = 1.0, sin refrigerante

■ **Denominación** Inserto : WNMX130520ZNN-MM (PC5400)  
Fresa : HRMDCM13050HR-4

■ **Resultado de la prueba**

**P** Acero aleado (SCR440)

■ **Condiciones de corte**  $vc$  (m/min) = 180,  $fz$  (mm/t) = 0.2  
 $ap$  (mm) = 2.0, sin refrigerante

■ **Denominación** Inserto : PDKT1605M0-MM (PC5400)  
Fresa : FMRC5063HRD-H

■ **Resultado de la prueba**

**M** Inoxidable (STS316)

■ **Condiciones de corte**  $vc$  (m/min) = 50,  $fz$  (mm/t) = 0.1  
 $ap$  (mm) = 4.0,  $ae$  (mm) = 15.0, sin refrigerante

■ **Denominación** Inserto : APMT1604PDSR-MM (PC5400)  
Fresa : AMC3063HS

■ **Resultado de la prueba**

**S** Aleaciones Resistentes al Calor (Inconel 718)

■ **Condiciones de corte**  $vc$  (m/min) = 60,  $fz$  (mm/t) = 0.1  
 $ap$  (mm) = 2.5, con refrigerante

■ **Denominación** Inserto : SNMX1206ANN-MM (PC5400)  
Fresa : RM8AC4080HR

■ **Resultado de la prueba**

## Ejemplos de aplicaciones (PC9540)

### M Acero inoxidable austenítico (STS304, HB200)

- **Pieza de trabajo** Barra cuadrada (300×200×100)
- **Condiciones de corte**  $vc$  (m/min) = 120,  $fz$  (mm/t) = 0.1  
 $ap$  (mm) = 1.5,  $ae$  (mm) = 20, con refrigerante
- **Denominación** Inserto : XNKT080508PNER-ML  
Porta : RM3PCM4063HR

#### ■ Resultado de la prueba

### M Acero inoxidable resistente al calor (DIN 1.4837)

- **Pieza de trabajo** Caja de turbocargador
- **Condiciones de corte**  $vc$  (m/min) = 100,  $fz$  (mm/t) = 0.16  
 $ap$  (mm) = 2.2, sin refrigerante
- **Denominación** Inserto : SNMX1206ANN-MF  
Porta : RM8AC4100HR

#### ■ Resultado de la prueba

### M Acero inoxidable austenítico (STS316, HB160)

- **Pieza de trabajo** Barra cuadrada (300×200×100)
- **Condiciones de corte**  $vc$  (m/min) = 120,  $fz$  (mm/t) = 0.15  
 $ap$  (mm) = 5.0,  $ae$  (mm) = 10, sin refrigerante
- **Denominación** Inserto : ADKT170608PESR-ML  
Porta : AMXS032R-3W32-125-AD17

#### ■ Resultado de la prueba

### M Acero inoxidable resistente al calor (DIN 1.4848)

- **Pieza de trabajo** Caja de turbocargador
- **Condiciones de corte**  $vc$  (m/min) = 80,  $fz$  (mm/t) = 0.2  
 $ap$  (mm) = 1.2, sin refrigerante
- **Denominación** Inserto : ONMX060608-MM  
Porta : RM16AC6100HR-M

#### ■ Resultado de la prueba

### M Acero inoxidable resistente al calor (DIN 1.4848, HB180)

- **Pieza de trabajo** Barra cuadrada (300×200×100)
- **Condiciones de corte**  $vc$  (m/min) = 90,  $fz$  (mm/t) = 0.2  
 $ap$  (mm) = 2.0,  $ae$  (mm) = 25, con refrigerante
- **Denominación** Inserto : SNMX1206ANN-MF  
Porta : RM8ACM4063HR-H

#### ■ Resultado de la prueba

### M Acero inoxidable resistente al calor (DIN 1.4848)

- **Pieza de trabajo** Caja de turbocargador
- **Condiciones de corte**  $vc$  (m/min) = 100,  $fz$  (mm/t) = 0.15  
 $ap$  (mm) = 1.5, con refrigerante
- **Denominación** Inserto : XNKT060405PNSR-MM  
Porta : RM3PS3025HR-3L20

#### ■ Resultado de la prueba

## Grados de carburo sin recubrimiento

- Características**
- Debido a la avanzada tecnología de sinterización de KORLOY, nuestros grados de carburo sin recubrimiento tienen una estructura de aleación fina que es necesario para obtener una calidad superior de una herramienta de corte sin recubrimiento

Tipo P

- Ventajas**
- Tenemos grados de carburo P, M, K y puede utilizarse en todo tipo de pieza de trabajo
  - Excelente calidad en el mecanizado con refrigerante, debido a la calidad superior. Resistencia al agrietamiento térmico del arbujo
  - Debido al diseño especial de carburos, tiene una micro estructura fina y baja afinidad con la pieza de trabajo.
  - Tiene una excelente tenacidad y produce menores cargas de corte

Tipo M

Tipo K

### Sistema de selección de grados sin recubrir

| Pieza de trabajo | Grado             | Velocidad de corte Recomendado (m/min) | ISO             | Rango de aplicación |          |
|------------------|-------------------|--|-----------------|---------------------|----------|
| P                | Acero             | ST20                                   | 90 (70 ~ 110)   | P20                 | ST20     |
|                  |                   | ST30A                                  | 80 (60 ~ 100)   | P30                 | ST30A    |
| M                | Acero Inoxidable  | U20                                    | 90 (70 ~ 110)   | M20                 | U20      |
| K                | Fundición         | H01, H05                               | 150 (110 ~ 190) | K10                 | H01, H05 |
|                  |                   | G10                                    | 120 (90 ~ 150)  | K20                 | G10      |
| N                | Aleación Aluminio | H01                                    | 600 (450 ~ 750) | N10                 | H01      |
|                  | Aleación Cobre    | H05                                    | 425 (320 ~ 530) | N20                 | H05      |

### Aplicación Principal

| Pieza de trabajo | Composición   | Características  | Pieza Trabajo  |
|------------------|---------------|--|--|
| P                | WC-TiC-TaC-Co | Excelente resistencia al choque térmico y a la deformación plástica    | Acero al carbon, Aleación de Acero, Acero inoxidable               |
| M                | WC-TiC-TaC-Co | Grados de amplia cobertura con excelente resistencia al choque térmico | Acero al carbon, Aleación de Acero, Acero inoxidable Acero fundido |
| K                | WC-Co         | Grados duros y fuertes   | Fundición, Metales No-Ferrosos, Plásticos, Acrílico, etc           |

### Propiedades físicas de los grados sin recubrir

| Pieza de trabajo | Grado | Dureza (HRA) | TRS (kgf/mm <sup>2</sup> ) | Modulo de Young's (10 <sup>3</sup> kgf/mm <sup>2</sup> ) | Expansión Térmica coeficiente (10 <sup>-6</sup> /°C) | Conductividad Térmica (cal/cm·sec·°C) |
|------------------|-------|--------------|----------------------------|--|--|---------------------------------------|
| P                | ST10  | 92.1         | 175                        | 48   | 6.2  | 25                                    |
|                  | ST20  | 91.9         | 200                        | 56   | 5.2  | 45                                    |
|                  | ST30A | 91.3         | 230                        | 53   | 5.2  | -                                     |
| M                | U20   | 91.1         | 210                        | -  | -  | 88                                    |
| K                | H01   | 92.9         | 210                        | 66   | 4.7  | 109                                   |
|                  | G10   | 90.9         | 250                        | 63   | -  | 105                                   |

1KPa = 102kgf/m<sup>2</sup>, 1w/mk = 2.39x10<sup>-3</sup>cal/cm·sec·°C

## Grados Cermet

- **Características**
  - Sustrato de alta dureza garantiza una larga vida útil en el fresado de alta Velocidad.
  - El borde de corte de alta inflexibilidad asegura una larga vida útil incluso en el mecanizado de alto impacto.
  - El sustrato químicamente estable proporciona un excelente acabado superficial de la pieza de trabajo

### ➤ Sistema de selección de grados cermet

| Pieza de trabajo | Tipos de maquinado | Grado recomendado  | Velocidad de corte Recomendado (m/min) | ISO             | Rango de aplicación |  |
|------------------|--------------------|--------------------|--|-----------------|---------------------|--|
| P                | Steel              | Corte Continuo     | CN2000                                 | 250 (200 ~ 300) | P20                 |  |
|                  |                    | Corte interrumpido | CN30                                   | 150 (100 ~ 200) | P30                 |  |

### ➤ Características de los grados cermet

| Grado Cermet | ISO       | Características  |

## Selecciones de grados de Endmills Sólido

### Grados para los endmills H

# PC303S/PC310U

- Sustrato ultrafino de sustrato y recubrimientos de alta dureza para una excelente resistencia al desgaste
- El tratamiento especial de la superficie proporciona una mayor resistencia al astillado

#### Características

Resistencia excepcional al desgaste gracias a las capas del recubrimiento extremadamente duras

### Grados para los endmills Z

# PC315E

- Sustrato fino y recubrimientos lubricantes para una maquinabilidad estable

#### Características

Recubrimientos lubricantes para una excelente maquinabilidad

#### Sistema Selección

| Pieza Trabajo |                  | Grado                 | ISO | Rango de Aplicación   |                       |                       |        |        |        |

### Características de KORLOY endmills

| Índice   | Características  |
|--|--|
| <b>H Endmill</b><br>(Endmill para acero de alta dureza)            | <ul style="list-style-type: none"> <li>Filos de corte negativos adecuados para mecanizar piezas de trabajo con tratamiento térmico de alta dureza bajo HRC70</li> <li>Mayor vida útil de la herramienta con el uso de sustrato ultra fino y película de alta dureza</li> </ul>   |
| <b>Z Endmill / I+ Endmill</b><br>(Endmill para corte general)      | <ul style="list-style-type: none"> <li>Excelente en el mecanizado de diversas piezas como acero al carbono, acero aleado, fundición, acero pre endurecido, etc. bajo HRC45</li> <li>Mayor vida útil de la herramienta con el uso de sustrato ultrafino y nueva tecnología de recubrimiento</li> </ul>  |
| <b>T Endmill</b><br>(Para la industria dental)                     | <ul style="list-style-type: none"> <li>Endmill para prótesis dentales hechas de circonia, titanio, Co-Cr, cera, PMMA y vitrocerámica.</li> <li>Herramientas a medida para cada tipo de fresadoras para uso dental.</li> </ul>  |
| <b>Z+ Endmill</b>  | <ul style="list-style-type: none"> <li>Endmill universal aplicable a una variedad de materiales de pieza de trabajo bajo HRC47</li> <li>Disponibilidad para desbaste y acabado</li> <li>Vida útil de la herramienta mejorada gracias al nuevo sustrato y al recubrimiento más avanzado</li> <li>Chips inhibidos y mayor tiempo de corte debido al diseño optimizado de la lama</li> </ul>  |
| <b>SSEA / A+ Endmill</b><br>(Endmill para aluminio)                | <ul style="list-style-type: none"> <li>Adecuado para el mecanizado a alta velocidad en aluminio y otros materiales no ferrosos</li> <li>Puede lograr un excelente acabado de la superficie, una mayor eliminación de viruta en un gran avance</li> </ul>   |
| <b>S+ Endmill</b><br>(Endmill para materiales difíciles de cortar) | <ul style="list-style-type: none"> <li>El filo de corte afilado y el alto ángulo de inclinación con una cavidad optimizada muestran un buen rendimiento de corte para acero inoxidable donde el endurecimiento por trabajo es un problema.</li> </ul>  |
| <b>R+ Endmill</b>  | <ul style="list-style-type: none"> <li>Endmill con alte eficiencia para el corte medio a desbaste</li> <li>Excelente eficiencia de mecanizado gracias al diseño de un filo de alta eficiencia para desbaste</li> <li>Fuerza de corte reducida gracias a las puntas específicamente diseñadas, el espaciado irregular de las estrías y el ángulo de avance</li> </ul>   |
| <b>D Endmill</b>   | <ul style="list-style-type: none"> <li>Endmill con el recubrimiento de diamante para grafito y cerámica.</li> <li>Excelente resistencia al desgaste gracias al recubrimiento de diamante de alta dureza y alta pureza</li> <li>Optimizado para cortes de alta velocidad y trabajo pesado gracias al fuerte agarre del recubrimiento</li> <li>Excelente rendimiento de corte y acabado gracias al diseño optimizado de la lama de alto ángulo de inclinación</li> </ul> |
| <b>Endmill de fresadora compuesto</b>                              | <ul style="list-style-type: none"> <li>Endmill de fresadora para mecanizar materiales compuestos (CFRP y GFRP).</li> <li>Minimiza los defectos de mecanizado gracias a su diseño para evitar la descamación, desprendimiento y rebabas.</li> <li>Excelente resistencia al desgaste y al desprendimiento gracias al recubrimiento de diamante nano-cristalino de alta dureza y alta pureza</li> </ul>   |
| <b>C-Max</b>   | <ul style="list-style-type: none"> <li>Ideal para mecanizar cobre, latón, bronce y materiales no ferrosos gracias a la combinación optimizada entre recubrimiento K-Silver con excelente lubricación y resistencia al desgaste y astillado, y el sustrato dedicado</li> </ul>  |
| <b>Super Endmill</b>   | <ul style="list-style-type: none"> <li>Recubrimiento de alta lubricación y tratamiento superficial especial</li> <li>Mayor resistencia a la soldadura y al astillado y estabilidad de mecanizado gracias a la tecnología para el tratamiento de la superficie de recubrimiento</li> </ul>  |

## Selecciones de grado de brocas Solidas

### Grados para Mach Solid Drill (MSD)

## PC325U

- El tratamiento especial de la superficie proporciona una mejor lubricación y reduce las cargas de corte
- Vida de herramienta estable gracias a una mayor resistencia a la soldadura.

#### Características

Mayor resistencia a la soldadura en cortes de velocidad media a alta debido a capas de recubrimiento altamente lubricantes Mayor resistencia al desgaste en el mecanizado de acero al carbono

### Grados para Mach Solid Drill (MSD)

## PC325T **new**

- Buena resistencia al desgaste en el mecanizado a alta temperatura de aleaciones termorresistentes.
- El buen acabado de la superficie reduce la resistencia a la fricción y mejora la evacuación de viruta.

#### Características

La alta resistencia al calor y a la oxidación aumenta la vida útil de la herramienta.

Recubrimiento con muy buen acabado superficial asegurando la lubricación y un mecanizado de alta calidad

### Grados para Mach Long Drill (MLD)

## PC215G/PC315G

- Mejora de la resistencia al desgaste gracias al sustrato ultrafino.
- Resistencia a la fricción reducida y un flujo suave de viruta debido a una mejor lubricación del recubrimiento

#### Características

Resistencia al desgaste excepcional debido al sustrato ultrafino

#### Sistema Selección

### Las características de grados con recubrimiento PVD

| Pieza de trabajo   | ISO                                 | Características   |
|--|-------------------------------------|---|
| PC325U   | P20 ~ P35<br>M20 ~ M30<br>K20 ~ K35 | <ul style="list-style-type: none"> <li>Grado universal para mecanizar acero, fundición, acero inoxidable, etc.</li> <li>Un estable rendimiento de corte con excelente resistencia al desgaste / astillado.</li> <li>Mayor resistencia a la soldadura debido al nuevo recubrimiento lubricante a velocidad media a alta</li> </ul> |
| PC325T    | M20 ~ M30<br>S20 ~ S30              | <ul style="list-style-type: none"> <li>Buena resistencia al desgaste para mecanizado a alta temperatura de aleaciones termorresistentes</li> <li>Buena resistencia al desgaste y a la rotura asegurando una maquinabilidad estable</li> </ul>   |
| PC215G   | P15 ~ P30<br>M15 ~ M25<br>K15 ~ K30 | <ul style="list-style-type: none"> <li>Grado universal para mecanizado de acero, fundición, etc.</li> <li>Un estable rendimiento de corte con excelente resistencia al desgaste / astillado.</li> </ul>   |
| PC315G   | P15 ~ P30<br>M15 ~ M25<br>K15 ~ K30 | <ul style="list-style-type: none"> <li>Grado universal para mecanizar acero, fundición, acero inoxidable, etc.</li> <li>Un estable rendimiento de corte con excelente resistencia al desgaste / astillado.</li> <li>Mayor resistencia a la soldadura debido al nuevo recubrimiento lubricante a velocidad media a alta</li> </ul> |
| PC230F   | P25 ~ P35                           | <ul style="list-style-type: none"> <li>Para el mecanizado de acero en general a velocidad media a alta.</li> <li>Un estable rendimiento de corte con excelente resistencia al desgaste / astillado.</li> </ul>  |
| ND2100  | N03 ~ N08                           | <ul style="list-style-type: none"> <li>Para maquinado de materiales compuestos</li> <li>Recubrimiento de diamante con excelente adhesión al sustrato</li> </ul>   |
| FG2 / FA1  | N05 ~ N25                           | <ul style="list-style-type: none"> <li>Mayor resistencia al desgaste / astillado con el uso de sustrato ultrafino</li> </ul>  |

### Características de las brocas de KORLOY

| Index         | Características  |
|---------------|--|
| MSD Plus      | <ul style="list-style-type: none"> <li>Mayor resistencia a la soldadura en cortes de velocidad media a alta debido a capas de recubrimientos altamente lubricantes</li> <li>Mayor resistencia al desgaste en el mecanizado de acero al carbono.</li> <li>Resistencia a la fricción reducida en bordes y estrías.</li> </ul>  |
| MSD Plus-S    | <ul style="list-style-type: none"> <li>Grado con buena resistencia al desgaste a altas temperaturas y resistencia al astillado exclusivo para taladrado de aleaciones termorresistentes</li> <li>Nuevo recubrimiento con excelente acabado superficial para reducir la resistencia a la fricción y aumentar la evacuación de virutas</li> <li>La prevención de astillado en el filo y la fractura de la herramienta garantiza una alta productividad.</li> </ul> |
| MSD Plus CFRP | <ul style="list-style-type: none"> <li>La mejor herramienta para el taladrado de piezas de trabajo CFRP.</li> <li>Excelente resistencia al desgaste debido al grado recubierto de diamante</li> <li>Reducción de la creación de rebabas en el mecanizado CFRP debido a los altos filos de corte</li> </ul>   |
| MSFD          | <ul style="list-style-type: none"> <li>Capacidad para el taladrado de la alta calidad con un ángulo de 180°</li> <li>Mejora de la resistencia al astillado y soldadura mediante el honing de filos y el biselado</li> <li>Creación minimizada de rebabas en comparación con taladros generales</li> </ul>  |
| MLD Plus      | <ul style="list-style-type: none"> <li>Mayor rigidez debido al diseño de un filo recto.</li> <li>Un suave flujo de viruta debido a la cavidad de viruta más ancha y un mejor acabado superficial en estrías</li> <li>Sistema de doble margen para una maquinabilidad estable.</li> </ul>   |
| ESDP          | <ul style="list-style-type: none"> <li>La capa de recubrimiento lubricante mejora la resistencia a la aportación de filo a velocidades medias y altas.</li> <li>Aumenta la resistencia al desgaste en el mecanizado de acero al carbono.</li> <li>Mayor resistencia a la aportación de filo y al desgaste con la aplicación del nuevo grado PC325U.</li> </ul>   |
| SSD Plus      | <ul style="list-style-type: none"> <li>Nueva forma aumenta el control de la viruta</li> <li>El acabado superficial y la geometría mejorada logran una alta calidad de mecanizado</li> <li>Vida útil estable aumentando la productividad</li> </ul>   |

# Grados con Recubrimiento de Diamante

## Grado para grafito y cerámica

### ND3000 **new**

- Recubrimientos de diamante cristalino SP3 de alta pureza y alta dureza
- La mejorada adhesión entre las capas recubiertas y el sustrato que es especializado para recubrimientos de diamante
- Excelente vida útil de la herramienta en el mecanizado de grafito y cerámica

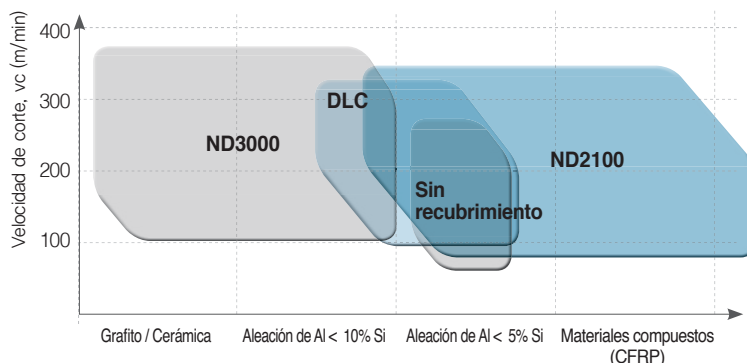

## Grado para materiales compuestos

### ND2100 **new**

- Mejor acabado superficial y resistencia al desgaste gracias al control. Tecnología de partículas de diamante nano-cristalino
- Mejor resistencia al desprendimiento debido al sustrato especializado. para recubrimientos de diamante
- Disponibilidad de mecanizado de alta calidad y alta precisión gracias a bordes afilados
- Excelente vida útil de la herramienta en el mecanizado de materiales compuestos

### Rango de aplicación

### Sistema Selección

### Características de grados con recubrimiento de diamante

| Grado             | ISO      | Características  |
|-------------------|----------|--|
| ND3000 <b>new</b> | N01 ~N05 | <ul style="list-style-type: none"> <li>• Para el desbaste continuo de grafito, cerámica y aleación de Al a altas velocidades</li> <li>• Un excepcional rendimiento de corte debido a la alta resistencia al desgaste y al desprendimiento.</li> <li>• Recubrimientos de diamante de alta dureza de estructura cristalina SP3 de alta pureza</li> </ul> |
| ND2100 <b>new</b> | N03~N08  | <ul style="list-style-type: none"> <li>• Para el acabado continuo de materiales compuestos y aleación de Al a altas velocidades.</li> <li>• Maquinabilidad estable debido a filos agudos y duraderos</li> <li>• Recubrimientos de diamante nano-cristalino bajo control de partículas.</li> </ul>  |

## Grados recubiertos con DLC

Insertos con recubrimiento DLC para materiales no ferrosos

# PD1005 <sup>new</sup> / PD1010 <sup>new</sup>

- Tecnología DLC de alta dureza y baja fricción.
- Resistencia al desgaste y lubricación maximizadas, mejorando la maquinabilidad y la calidad del mecanizado.
- Sustrato óptimo para cada pieza de trabajo, garantizando una vida útil estable y larga.
- Para mecanizado de metales no ferrosos como aluminio, aleación de Al-Si, cobre, etc.

### Características

| Superficie del recubrimiento lisa | Recubrimiento DLC de alta dureza | Grado                | Resistencia al desgaste y al filo de aportación | Acabado superficial | Rizo de la virtua |
|-----------------------------------|----------------------------------|----------------------|---|---------------------|-------------------|
|                                   |                                  | Carburo sin recubrir |   |                     |                   |
|                                   |                                  | DLC PD1010           |   |                     |                   |

### Rango de aplicación

### Sistema Selección

| Pieza Trabajo         | Grado   | ISO              | Rango de Aplicación |

### Características de los grados con recubrimiento DLC

| Grado  | ISO | Características   |
|--------|-----|---|
| PD1005 | N05 | <ul style="list-style-type: none"> <li>• Para mecanizado continuo a alta velocidad de aluminio y cobre.</li> <li>• Alta resistencia al desgaste y a la soldadura para lograr una buena maquinabilidad</li> <li>• Alto rendimiento del recubrimiento DLC con alta dureza y baja fricción.</li> </ul>                               |
| PD1010 | N10 | <ul style="list-style-type: none"> <li>• Para mecanizado en condiciones de intermedias a altas e interrumpidos de aleación de aluminio y aleación Al-Si</li> <li>• Vida útil estable debido al sustrato con resistencia al astillado</li> <li>• Revestimiento DLC de alto rendimiento con alta dureza y baja fricción.</li> </ul> |

## Ejemplos de aplicaciones (ND3000/ND2100)

### N Molde de grafito

- **Condiciones de corte**  $vc$  (m/min) = 100,  $fz$  (mm/t) = 0.11,  $ap$  (mm) = 0.26, sin refrigerante
- **Denominación** Endmill : DBE4060-110-N250S06 (ND3000)

#### ■ Resultado de la prueba

### N Molde de grafito

- **Condiciones de corte**  $vc$  (m/min) = 300,  $fz$  (mm/t) = 0.1,  $ap$  (mm) = 0.15, sin refrigerante
- **Denominación** Endmill : DBE2060-080-N250S06 (ND3000)

#### ■ Resultado de la prueba

### N CFRP

- **Condiciones de corte**  $vc$  (m/min) = 200,  $fn$  (mm/rev) = 0.21,  $ap$  (mm) = 10,  $ae$  (mm) = 2.8
- **Denominación** Endmill : CCR2080-075 (ND2100)

#### ■ Resultado de la prueba

### N CFRP

- **Condiciones de corte**  $vc$  (m/min) = 200,  $fz$  (mm/t) = 0.17,  $ap$  (mm) = 10,  $ae$  (mm) = 1.2
- **Denominación** Endmill : CCLR4080-075 (ND2100)

#### ■ Resultado de la prueba

## Ejemplos de aplicaciones (PD1005/PD1010)

### N Aleación Aluminio con Silicio

- **Pieza de trabajo** Aleación de aluminio fundido, ALDC7 (Si 8%)
- **Condiciones de corte**  $vc$  (m/min) = 400,  $fn$  (mm/rev) = 0.25-0.3,  $ap$  (mm) = 1.0-1.5, con refrigerante
- **Denominación** Inserto : CNMG120408-HA (PD1005)  
Porta : PCLNR2525-M12

#### ■ Resultado de la prueba

### N Aleación Aluminio con Silicio

- **Pieza de trabajo** Aleación de aluminio forjado, AC4C (Si 7%)
- **Condiciones de corte**  $vc$  (m/min) = 740,  $fn$  (mm/rev) = 0.15,  $ap$  (mm) = 1.0-1.5, con refrigerante
- **Denominación** Inserto : XEKT19M504FR-MA (PD1010)  
Porta : PAXS5032HR-A

#### ■ Resultado de la prueba

## Grados de insertos cBN

- Características**
- Excelente dureza y resistencia térmica al sinterizar los componentes principales y la cerámica especial de KORLOY aglutinante a alta presión y alta temperatura
  - Excelente dureza y resistencia al desgaste para una mayor productividad en el mecanizado de fundición y aleaciones de tratamiento térmico a alta velocidad

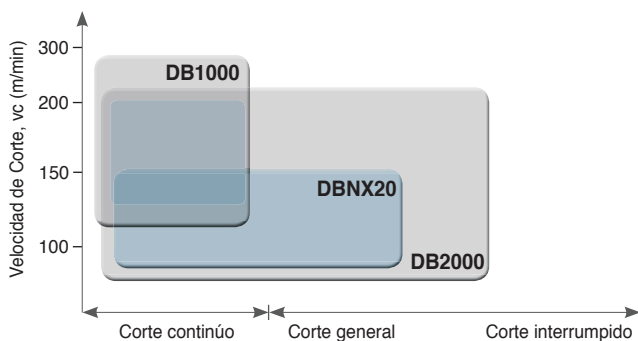

► Tipos de insertos

| Alta presión                       |                     | Resistencia al desgaste |  | Productividad |                  |
|------------------------------------|---------------------|-------------------------|--|---------------|------------------|
|                                    |                     |                         |  |               |                  |
| Para el tipo posible de rectificar | Tipo de un solo uso | Tipo de borde múltiple  | Tipo de borde múltiple (Con recubrimiento) | Tipo sólido   | Tipo de tronzado |

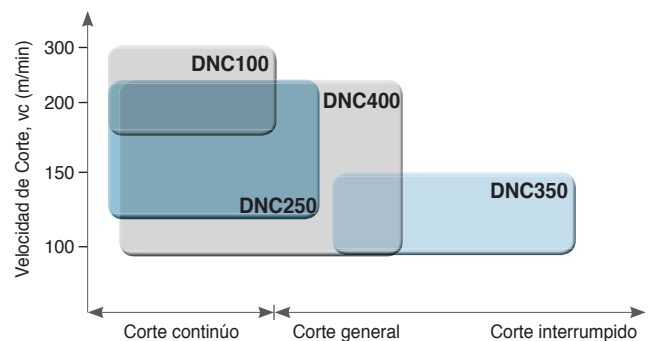

► Insertos cBN

| Tipo filo múltiple con recubrimiento  |  | Tipo imposible de rectificar   |  |
|---|--|--|--|
|   |  |  |  |
| <ul style="list-style-type: none"> <li>• Fácil manejo de bordes</li> <li>• Excelente vida útil de la herramienta en comparación con los insertos sin recubrimiento</li> </ul>   |  | <ul style="list-style-type: none"> <li>• Precio económico</li> <li>• Más pequeño que un costoso cBN y una reducción de un costo espectacular</li> <li>• Cara de soldadura fuerte y un estable rendimiento de corte</li> </ul>                          |  |
| Tipo de borde múltiple  |  | Para el tipo posible de rectificar   |  |
|   |  |  |  |
| <ul style="list-style-type: none"> <li>• El precio por borde es más razonable en comparación con las esquinas individuales normales, tipo de un solo uso</li> <li>• Amplia aplicación de mecanizado continuo a interrumpido.</li> </ul> |  | <ul style="list-style-type: none"> <li>• Larga vida útil de la herramienta.</li> <li>• Excelente resistencia al desgaste, alta dureza</li> <li>• El ahorro de costo de la herramienta debido a la inserto posible de rectificar 3 ~ 4 veces</li> </ul> |  |

## Tipo sólido cBN DBN400

### Características

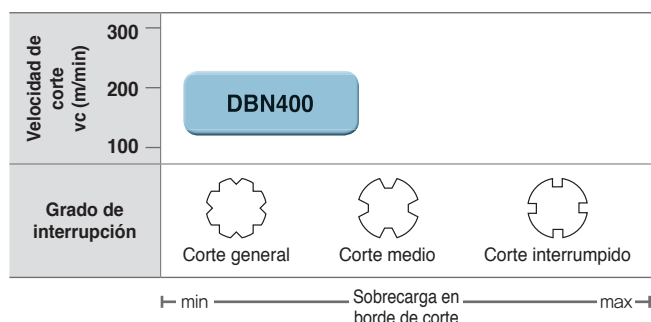

- Para corte medio y ligero interrumpido de acero tratado al calor
- Grado equilibrado de resistencia al desgaste y resistencia a los golpes
- Tipo sólido para maquinado altamente eficiente

### Características de tipo sólido

- Mayor productividad a alta velocidad y alta profundidad de corte
- Ideal para quitar la capa cementada y mecanizar las soldaduras
- Soldadura estable con el uso de llamas de 3 caras
- Excelente rendimiento a diferentes profundidades de corte

### Rango de aplicación

### Condición de corte recomendada

|   |   |
|---|---|
| Velocidad de corte vc (m/min)           | 120  220 |
| Avance fn (mm/rev)                      | 0.1  0.3 |
| Profundidad de corte por tiempo ap (mm) |  0.5     |

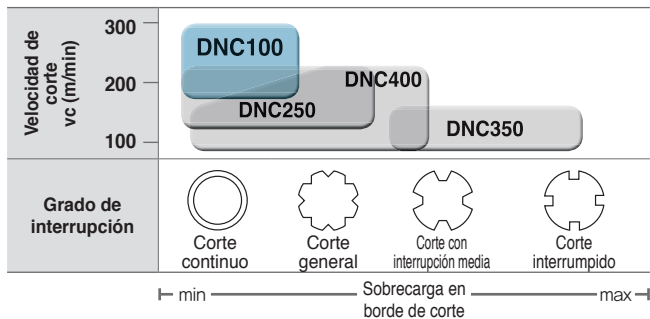

## cBN con recubrimiento

# DNC100 new

- Características**
  - Excelente resistencia térmica
  - Capa de recubrimiento con alta dureza, resistencia a la oxidación y resistencia al desprendimiento

### Rango de aplicación

### Condición de corte recomendada

|   |                |
|---|----------------|
| Velocidad de corte vc (m/min)           | 180 ————— 300  |
| Avance fn (mm/rev)                      | 0.03 ————— 0.3 |
| Profundidad de corte por tiempo ap (mm) | 0.03 ————— 0.3 |

- Mayor resistencia a la oxidación y al desgaste debido a la capa de recubrimiento de alta dureza
- Resistencia a la fractura y resistencia al astillado dramáticamente mejoradas

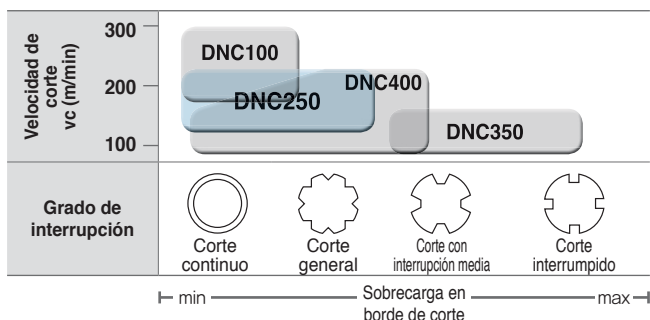

## Bordes múltiple con recubrimiento para un corte altamente eficiente de la aleación con tratamiento térmico

# DNC250

- Características**
  - Vida de la herramienta estable y larga.
  - Costo efectivo por inserto de un solo uso con bordes múltiples

### Rango de aplicación

### Condición de corte recomendada

|   |                |
|---|----------------|
| Velocidad de corte vc (m/min)           | 120 ————— 220  |
| Avance fn (mm/rev)                      | 0.05 ————— 0.3 |
| Profundidad de corte por tiempo ap (mm) | 0.05 ————— 0.3 |

## cBN Con recubrimiento para corte alto interrumpido

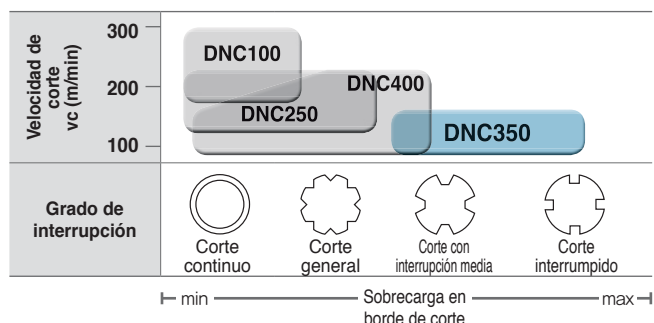

# DNC350

- Características**
- Excelente vida útil de la herramienta y productividad en el corte interrumpido
  - Nuevo recubrimiento PVD aplicado con alta dureza y oxidación resistencia

- Recubrimiento de alta dureza y resistencia a la oxidación
- Recubrimiento de alta dureza
- cBN muy fino + sustrato muy resistente

### Rango de aplicación

### Condición de corte recomendada

|   |                |
|---|----------------|
| Velocidad de corte vc (m/min)           | 90 ————— 150   |
| Avance fn (mm/rev)                      | 0.05 ————— 0.3 |
| Profundidad de corte por tiempo ap (mm) | 0.05 ————— 0.3 |

## Tipo sólido con recubrimiento cBN

# DNC400 **new**

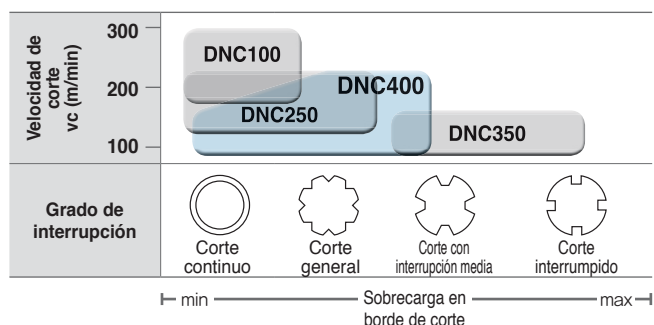

- Características**
- Para el mecanizado de acero tratado al calor en corte continuo y medio interrumpido
  - Mayor vida útil de la herramienta debido a la capa de recubrimiento.
  - Tipo sólido para propósito universal

### Características del tipo sólido cBN

- Mayor productividad a alta velocidad y alta profundidad de corte
- Ideal para quitar la capa cementada y las soldaduras
- Mejor estabilidad de soldadura debido a las llamas de 3 caras
- Excelente rendimiento de corte a diferentes profundidades de corte

### Rango de aplicación

### Condición de corte recomendada

|   |        |                |
|---|--------|----------------|
| Avance fn (mm/rev)                      | DNC400 | 0.05 ————— 0.3 |
|   | DNC250 | 0.05 ————— 0.3 |
|   | DNC350 | 0.05 ————— 0.3 |
| Profundidad de corte por tiempo ap (mm) | DNC400 | 0.05 ————— 0.5 |
|   | DNC250 | 0.05 ————— 0.3 |
|   | DNC350 | 0.05 ————— 0.3 |

## cBN sin recubrimiento

# DB1000

### Características

- cBN sin recubrimiento con la mayor resistencia al desgaste a alta velocidad
- Excelente vida útil de la herramienta en corte continuo a la luz interrumpida
- Mejor resistencia a la fractura junto con alta resistencia al desgaste
  - Mayor resistencia térmica y dureza debido al puro TiCN de cerámica aglutinante

## cBN sin recubrimiento

# DB2000

### Características

- Grado universal para el mecanizado en general de tratamiento térmico.
  - Vida de herramienta estable en corte continuo a bajo / medio interrumpido
- Tanto la resistencia a la fractura como la resistencia al desgaste adquiridas con el uso del puro aglutinante de cerámica
- Rugosidad de la superficie estable

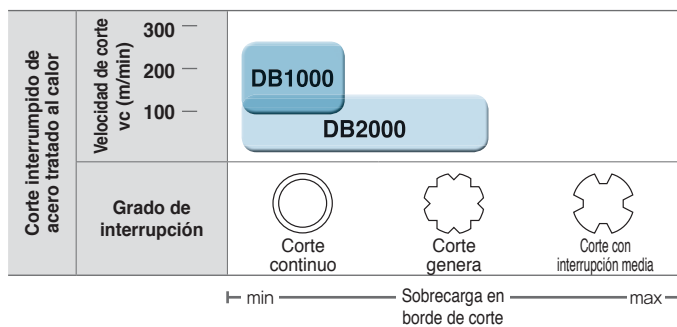

### Nueva tecnología de materiales cerámicos de alta pureza

DB2000 minimiza dramáticamente las impurezas con el uso de aglutinante cerámica de alta pureza. Materiales y mejora la resistencia térmica y tenacidad.

Las impurezas incluidas en el aglutinante cerámico de grado convencional causaron una resistencia térmica inferior y la dureza de los compuestos sinterizados, que provocaron grietas (fracturas) y desgaste.

### Rango de aplicación

### Condición de corte recomendada (DB1000)

|   |                 |

## Grados de insertos PCD

**Características** Los productos PVD de KORLOY están fabricados con una punta de PCD de alta calidad a alta temperatura y presión, y soldada al inserto de carburo. Ya que KORLOY proporciona productos de alta calidad para torneado, fresado, fresado con enmils, es posible cubrir las necesidades de una amplia gama de aplicaciones.

- Excelente duración de la herramienta en aleaciones de aluminio y aleaciones de cobre
- Excelente duración de la herramienta en cerámica, aluminio alto en silicio y piedra
- Excelente duración de la herramienta en plástico, grafito y madera

### Calidad PCD

| Calidad | Características  | Aplicación  | Tam. grano (µm) | Dureza (Hv)   | TRS (kgf/mm²) |
|---------|--|---|-----------------|---------------|---------------|
| DP90    | Grano grueso de diamantes es utilizado para obtener una excelente resistencia al desgaste, suficiente para maquinado de carburo cementado, aleaciones de aluminio alto en silicio              | Carburo cementado<br>Desbaste en cerámica<br>Aleación de aluminio alto en silicio | 50              | 10,000~12,000 | 110           |
| DP150   | Mediante el uso de finos granos de diamante tiene buenas propiedades de enlace, teniendo una característica de la vinculación es conveniente para el maquinado de metales no ferrosos, grafito | Aleación de aluminio alto en silicio, Cobre, Aleación de bronce, Madera, Carbon   | 5               | 10,000~12,000 | 200           |
| DP200   | Por medio del grano ultrafino de diamante es posible hacer el filo mas agudo. Así el grado es apropiado para trabajar en el maquinado de materiales no ferrosos                                | Plástico<br>Madera<br>Acabado preciso de aluminio                                 | 0.5             | 8,000~10,000  | 220           |

### Condiciones de corte Recomendada

| Pieza Trabajo                     | Velocidad de Corte (m/min) | Avance (mm/rev) | Profundidad de Corte (mm) | Grado recomendado |                 |
|-----------------------------------|----------------------------|-----------------|---------------------------|-------------------|-----------------|
|                                   |                            |                 |                           | 1 <sup>st</sup>   | 2 <sup>nd</sup> |
| Aleación de Aluminio (4%~8% Si)   | 1000 ~ 3000                | 0.1 ~ 0.6       | ~ 3                       | DP150             | DP200           |
| Aleación de Aluminio (9%~14% Si)  | 600 ~ 2500                 | 0.1 ~ 0.5       | ~ 3                       | DP150             | DP200           |
| Aleación de Aluminio (15%~18% Si) | 300 ~ 700                  | 0.1 ~ 0.4       | ~ 3                       | DP150             | DP200           |

## Características rompe virutas

# Rompe virutas LP new [ Para corte medio a acabado ]

- Triturador de virutas para acero forjado de partes de automóviles y acero normal
- Los puntos cuádruples mejoran la productividad a través del control eficiente de chips en alta alimentación
- Ángulo de tierra minimiza la fuerza de corte

### Características rompe virutas LP

#### ► Punto frontal

- Mayor estabilidad de los rizos de viruta en alta alimentación
- Excelente control de viruta al copiar.
- Menor fuerza de corte a baja profundidad de corte y alta alimentación

#### ► Ángulo del rompeviruta variable

- Menor desgaste en cara
- Ayuda a prevenir el despostillamiento en el filo secundario

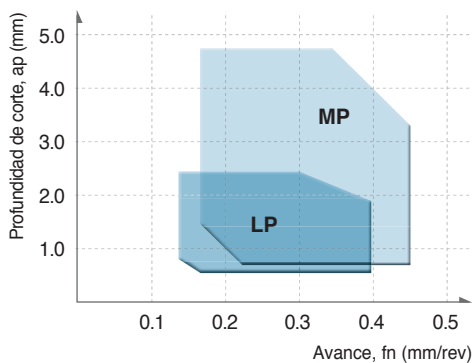

#### ► Espaciado rompe virutas

- Bolsillo de viruta más grande para una mejor evacuación de viruta en alta alimentación
- Fuerza de corte reducida con mayor contacto superficie de chips

### Rango de aplicación

### Evaluación de prueba (medición fuerza de corte)

- **Pieza trabajo** SM45C, Ø100, Maquinado externo
- **Condiciones de corte**  $v_c$  (m/min) = 250,  $a_p$  (mm) = 1.0,  $f_n$  (mm/rev) = 0.25/0.40, con Lubricante
- **Herramientas** CNMG120408-□□

#### Avance medio (0.25 mm/rev)

#### Alto avance (0.40 mm/rev)

# Características rompe virutas

## Rompe virutas MP new [ Para corte medio ]

- Rompevirutas para acero forjado de partes de automóviles y todos los demás aceros
- Los puntos cuádruples mejoran la productividad a través del control eficiente de chips en alta alimentación
- Ángulo de tierra minimiza la fuerza de corte

### Características rompe virutas MP

#### ► Rompe virutas con aristas frontales

- Mayor estabilidad de los rizos de viruta en alta alimentación
- Excelente control de viruta al copiar.
- Menor fuerza de corte a baja profundidad de corte y alta alimentación

#### ► Ángulo del rompeviruta variable

- Menor desgaste en cara
- Evita el astillado en el borde de corte menor
- Mayor tenacidad a gran profundidad de corte y corte interrumpido

#### ► Espaciado rompe virutas

- Bolsillo de viruta más grande para una mejor evacuación de viruta en alta alimentación
- Fuerza de corte reducida con mayor contacto superficie de chips

### Rango de aplicación

### Evaluación de prueba

- **Pieza trabajo** SCM440 (Acero aleado), Ø100, Maquinado exterior
- **Condiciones de corte**  $vc$  (m/min) = 280,  $ap$  (mm) = 1.5,  $fn$  (mm/rev) = 0.25/0.40, con Lubricante
- **Herramientas** CNMG120408-□□

#### Avance medio (0.25 mm/rev)

#### Avance medio (0.40 mm/rev)

## Características rompe virutas

### Rompe virutas MM new [ Para corte medio ]

- Primer rompevirutas recomendado para el mecanizado de acero inoxidable
- Cambio a: un doble ángulo del rompeviruta logra un rendimiento de corte agudo y mayor resistencia
- Bolsillos anchos para virutas para una evacuación estable de las virutas en grandes avances / profundidades de corte

#### Características rompe virutas MM

##### ▶ Ángulo del rompeviruta variable

- Excelente control de viruta y corte agudo a bajas profundidades de corte
- Retrasa el desgaste del cráter
- Previene la deformación plástica

##### ▶ Ángulo doble en arista de corte

- Equilibrio entre requisitos de agudo y resistente los bordes de corte
- Filo afilado para el mecanizado de alta velocidad
- Evita el astillado en mecanizado interrumpido

##### ▶ Espaciado ancho para viruta

- Evacuación estable de viruta a altas velocidades / avances
- Acabado superficial mejorado al evitar melladuras y arañazos causados por virutas endurecidas de la pieza de trabajo al ser arrancadas en altas profundidades de corte
- Previene el recrecimiento del filo de corte (filo de aportación)

#### Evaluación de prueba

##### Filo de aportación

- **Pieza trabajo** STS405 (Ferrítico)
- **Condiciones de corte**  $vc$  (m/min) = 180,  $fn$  (mm/rev) = 0.3,  $ap$  (mm) = 3.0, con Lubricante
- **Herramientas** Inserto : CNMG120408-MM (NC9125)  
Porta : PCLNL2525-M12

MM(NC9125)

Competencia

##### Deformación plástica

- **Pieza trabajo** STS316 (Austenítico)
- **Condiciones de corte**  $vc$  (m/min) = 200,  $fn$  (mm/rev) = 0.35,  $ap$  (mm) = 2.0, sin Lubricante
- **Herramientas** Inserto : CNMG120408-MM (NC9135)  
Porta : PCLNL2525-M12

MM(NC9135)

Competencia

# Características rompe virutas

## Rompe virutas RM new [ Para desbaste ]

- Primer rompe viruta recomendado para mecanizado fuertes e interrumpidos de acero inoxidable
- Previene el desgaste en muesca y las rebabas con avances altos y altas profundidades de corte
- La fuerza de corte reducida prolonga la vida útil de la herramienta en el mecanizado de alto avance

### Características rompe virutas RM

#### ▶ Ángulo del rompeviruta variable

- Excelente control de viruta y corte agudo a bajas profundidades de corte
- Retrasa el desgaste en cara
- Previene la deformación plástica

#### ▶ Ángulo del rompevirutas leve espaciado

- Filo de corte afilado y borde de corte ancho para reducir la fuerza de corte
- Rebabas reducidas
- La carga de corte dispersa permite una mayor tenacidad

#### ▶ Diseño diferencial

- El diseño escalonado facilita la evacuación de viruta
- La suave evacuación de viruta evita la deformación plástica

### Evaluación de prueba

#### Desgaste en muesca

- **Pieza trabajo** STS410 (Martensite)
- **Condiciones de corte**  $vc$  (m/min) = 150,  $fn$  (mm/rev) = 0.25,  $ap$  (mm) = 3.0, con Lubricante
- **Herramientas** **Inserto** : CNMG120408-RM (NC9115)  
**Porta** : PCLNL2525-M12

#### Rebaba

- **Pieza trabajo** Dúplex
- **Condiciones de corte**  $vc$  (m/min) = 120,  $fn$  (mm/rev) = 0.2,  $ap$  (mm) = 2.0, in Lubricante
- **Herramientas** **Inserto** : CNMG120408-RM (NC9125)  
**Porta** : PCLNL2525-M12

## Características rompe virutas

### Rompe virutas MK new [ Para corte medio ]

- Ideal para cortes continuos de fundición dúctil y fundición gris
- Borde del filo de corte en ángulo proporciona un acabado de superficie mejorado

#### Características rompe virutas MK

##### Borde del filo de corte en ángulo

- Borde del filo de corte en ángulo proporciona un mejor rendimiento de corte
- Máxima resistencia al desgaste en corte continuo
- Resultados de alta calidad en acabado superficial

##### Área de soporte ancha

- Mayor estabilidad de sujeción
- Previene las astillas en las vibraciones durante la operación

#### Evaluación de prueba

##### Prueba de resistencia al desgaste

- **Pieza trabajo** GCD500(KS), Ø90 (Tubo esférico) → Maquinado hasta Ø30
- **Condiciones de corte**  $vc$  (m/min) = 400,  $fn$  (mm/rev) = 0.35,  $ap$  (mm) = 2.5, con Lubricante
- **Tiempo de corte** 30 pasadas con buenos resultados indicando un desgaste normal tanto en cara como en flanco
- **Herramientas** Inserto: CNMG120408-MK (NC6315)  
Porta : DCLNR2525-M12

MK (NC6315)

Producto existente

Resistencia al desgaste en flanco incrementada un 130%

#### Rango de corte recomendado

## Características rompe virutas

# Rompe virutas RK new [ Para desbaste ]

- Ideal para cortes de alta velocidad / avance de fundición dúctil y fundición gris
- Borde del filo de corte plano proporciona mejor resistencia al astillado

### Características rompe virutas RK

#### Borde plano

- Borde del filo de corte plano proporciona mayor tenacidad y mas resistencia al astillado
- Disponibilidad de mecanizado estable bajo altas cargas a gran profundidad de corte o corte interrumpido
- Ancho de tierra optimizado para maquinado de alto avance

#### Área de soporte ancha

- Mayor estabilidad de sujeción
- Minimiza vibración y astillado

### Evaluación de prueba

#### Prueba de resistencia al impacto

- **Pieza trabajo** GCD500(KS), Ø90 (Pieza forma triangular) → Maquinado hasta Ø30
- **Condiciones de corte**  $vc$  (m/min) = 380,  $fn$  (mm/rev) = 0.35,  $ap$  (mm) = 2, con Lubricante
- **Tiempo de corte** 15 pasadas mostrando resultados de desgaste en cara normales y buena resistencia al astillado
- **Herramientas** **Insert** : CNMG120408-RK (NC6315)  
**Holder** : DCLNR2525-M12

RK (NC6315)

Producto existente

Resistencia al astillado incrementada un 125%

### Rango de corte recomendado

## Características rompe virutas

### Rompe virutas VP1 [ Para acabado ]

- Los filos de corte muy positivos
  - El área de contacto reducida entre la superficie de la cara y la viruta minimiza el calor de corte y mejora la vida útil de la herramienta
- Condiciones de corte recomendadas:  $f_n$  (mm/rev) = 0.05~0.2,  $a_p$  (mm) = 0.1~1.5

#### Diseño optimizado para acabado

- Obtiene un excelente rendimiento de corte y acabado superficial de calidad a bajo profundidad de corte y alta velocidad

#### Arista de corte muy positiva

- Minimiza el calor de corte al reducir el área de contacto entre la superficie del flanco y las virutas
- Previene la acumulación de bordes y prolonga la vida útil de la herramienta

### Rompe virutas VP2 [ Para corte medio a acabado ]

- Diseño de filo de corte altamente positivo / ángulo de inclinación lateral aplicado
  - El control estable de viruta mejora la maquinabilidad en el mecanizado de bolas a profundidades de corte variables
- Condiciones de corte recomendadas:  $f_n$  (mm/rev) = 0.1~0.4,  $a_p$  (mm) = 0.5~4.5

#### Filo de corte afilado y espaciado ancho para virutas

- Aumentar la productividad
- Ideal para corte medio a acabado

#### Arista de corte en ángulo muy positivo

- Mejora el rendimiento de corte con su control de viruta estable a diferentes profundidades de corte

**Características rompe virutas**

## Rompe virutas VP3 [ Para corte medio ]

- Diseño del filo de corte en ángulo muy positivo / espaciado para viruta muy amplio  
- mejora estabilidad en corte interrumpido y cuando se requiere un filo de corte resistente y tenaz
- Condiciones de corte recomendadas:  $f_n$  (mm/rev) = 0.1~0.45,  $a_p$  (mm) = 0.5~5.0

**Diseño del espaciado en pendiente con forma de R**

- Crea un espacio escalonado entre el borde y la tierra para Haga que el flujo de viruta sea suave a una profundidad alta y baja de los cortes

**Arista de corte positiva y amplia espaciado intermedio**

- Minimizar la concentración de calor en gran profundidad de corte
- Mejora la estabilidad en el mecanizado interrumpido de un pieza de trabajo tenaz

## Rompe virutas VP4 **new** [ Para desbaste ]

- Primera recomendación para maquinar inconel, con alta resistencia a la temperatura
- Gran estabilidad de mecanizado como resultado de filos de corte reforzados y amplios bolsillos de viruta

**Ángulo de ataque diseñado para alta resistencia a corte de materiales de alta dureza**

- Refuerza los bordes de corte y evita el desgaste de la muesca en mecanizado de superficies rugosas
- Previene el astillado en corte interrumpido

**Ancho espaciado para viruta**

- Reducir las cargas de corte y mejorar Estabilidad incluso a gran profundidad de corte en el desbaste

## Características rompe virutas

### Rompe virutas para inserto positivo VL

[ Para acabado ]

- Flanco y rompe virutas muy afiladas para mejorar el control de viruta de material tenaces como el acero con bajo contenido de carbono, acero de tuberías y discos de hierro
- El filo de corte ofrece una baja carga de corte y facilita control de viruta en profundidades de corte bajas. Muy buena opción para línea de producción automatizadas

#### Características del rompevirutas VL

- **Bordes de corte afilados**
  - Los bordes de corte de rastrillo alto proporcionan mejores acabados superficiales
  - La baja resistencia al corte reduce el calor de corte
- **Ángulo de inclinación posterior de 2 pasos**
  - Control de viruta estable independientemente de las velocidades de alimentación variables
  - Excelente maquinabilidad incluso al mecanizar piezas suaves

#### Prueba control de viruta

- **Pieza trabajo** SCM440 (Acero aleado), Ø50, Maquinado diametro interno
- **Condiciones de corte**  $vc = 250$  m/min,  $ap = 0.3 \sim 1.5$  mm,  $fn = 0.05 \sim 0.25$  mm/rev
- **Herramientas** CCMT09T304-VL

### Rompe virutas para inserto positivo MP

[ Para corte medio a acabado ]

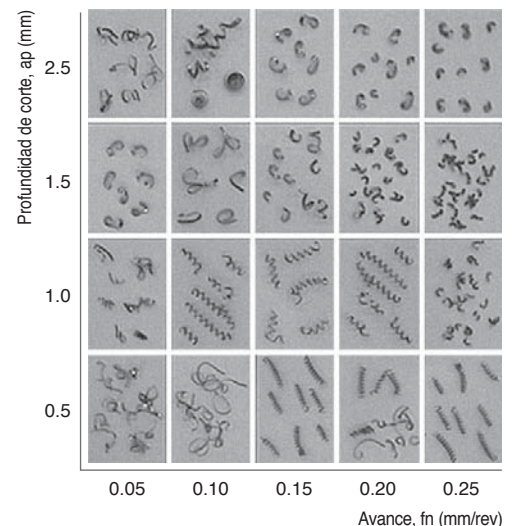

- Para el corte continuo de acero forjado en alto avance
- Tornillo de inserción para el mecanizado interno de componentes de automóviles

#### Características del rompevirutas MP

- **Rompeviruta tridimensional de 2 pasos**
  - Control estable de viruta en mecanizados interno inestables
  - Previene bloque de viruta
- **Borde de corte más fuerte y bolsillo de viruta ancho**
  - Mayor resistencia al desenchado en el mecanizado interno inestable

#### Prueba control de viruta

- **Pieza trabajo** SCM440
- **Condiciones de corte**  $vc = 200$  m/min,  $ap = 0.5 \sim 2.5$  mm,  $fn = 0.05 \sim 0.25$  mm/rev
- **Herramientas** CCMT09T304-MP

## Características rompe virutas

### Rompe virutas VL [ Para acabado ]

- Control de viruta mejorado para materiales con alta tenacidad como el acero al carbono, acero de tuberías, discos de acero, etc
- Control de viruta mejorado y reducción de carga de corte, en maquinado externo, torneado frontal y copiado
- Resistencia del filo de corte mejorada, con provada eficiencia en líneas de producción automatizadas

#### ➤ Características del rompevirutas VL

- **Rompeviruta diseñado de 2 pasos** - Acero suave adecuado  
- Control de viruta estable en la baja alimentación y profundidad de corte
- **Diseñado con puntos especiales** - Rotura estable de viruta en la baja profundidad de corte
- **Ángulo de inclinación lateral aplicado** - Control de viruta mejorado en aplicaciones de copiado y cara  
- Disminución de la carga de corte y mejor acabado superficial

#### ➤ Prueba control viruta

- **Pieza trabajo** SM20C
- **Condiciones de corte**  $vc = 250 \text{ m/min}$ ,  $ap = 0.5 \text{ mm}$   
 $fn = 0.2 \text{ mm/rev}$  (Parte), Con refrigerante
- **Herramientas** DNMG150408-VL

Rompeviruta VL Competencia A Competencia B Competencia C

#### ➤ Simulación FEM de corte del diseño del rompevirutas

- Para el diseño de geometría, las formas de viruta y el flujo de viruta son previsible
- Diseño óptimo del rompevirutas por diversas condiciones de corte y piezas de trabajo

### Rompe virutas VB [ Para acabado ]

- Excelente evacuación de viruta en corte continuo a alta velocidad de distintas piezas de trabajo
- Rompe virutas tridimensional que consigue reducir la carga de corte, aumentar rigidez de la arista decorte en maquinado y aumentar vida útil
- Control de viruta estable en copiado y maquinado interno

#### ➤ Características del rompevirutas VB

- **6 golpes en la esquina de inserción** - Control de viruta superior y corte de viruta en la copia con varias profundidades de corte
- **Ángulo de inclinación lateral** - Control de viruta excepcional en torneado frontal y copiado. Mayor vida útil gracias a una rugosidad superficial mejorada rugosidad y menor resistencia al corte
- **filo en parte de 100 grados para mecanizado medio** - Excelente evacuación de viruta y tenacidad en el mecanizado con gran profundidad de corte

#### ➤ Desempeño

Mejor maquinado    Mejor control de viruta    Mayor vida util

Rompeviruta VB

Rompe virutas convencional

## Características rompe virutas

### Rompe virutas VC [ Para corte medio a acabado ]

- Evacuación de viruta superior en alta velocidad y en maquinado continuo de piezas diferentes (acero al carbono, acero de aleación, etc)
- La rompevirutas de 3 dimensiones de KORLOY asegura una mayor vida útil debido a la baja carga de corte y mejora la fuerza del filo
- Control de viruta estable en maquinado interno y de copiado

#### Características del rompevirutas VC

- 4 en la esquina del inserto
  - Excelente control de la viruta en diferentes profundidades de corte y un excelente corte de la viruta en maquinado externo, interno copiado, y careado

#### Evaluación del control de viruta (copiado)

Rompeviruta VC

Rompevirutas Convencionales

### Rompe virutas VQ [ Para corte medio a acabado\_Para cermet ]

- Excelente rendimiento de corte y bordes de corte reforzados
- Control de viruta mejorado a baja profundidad de corte

#### Características del rompevirutas VQ

- **Ángulo de inclinación tridimensional**
  - Mejora el acabado de la superficie gracias a un excelente rendimiento de corte
  - Menos calor de corte y mayor vida útil de la herramienta gracias al bajo corte resistencia
- **Estructura sobresaliente biselada**
  - Flujo de viruta suave a baja rofundidad de corte
  - Amplia gama de aplicaciones

#### Evaluación de desempeño

- **Pieza trabajo** SCM440(Acero aleado), Ø100, Torneado diámetro externo
- **Condiciones de corte** vc = 280 m/min, ap = 1.5 mm, fn = 0.25 mm/rev
- **Herramientas** CNMG120408-VQ(CN2500)

Comparación del desgaste

Comparación de rugosidad de superficie

## Características rompe virutas

# Rompe virutas VH/VT [ Para maquinado pesado ]

- Resistente rompeviruta adecuada para maquinado pesado en la construcción naval y en las industrias de central eléctrica
- Recomendable para el maquinado horizontal de grandes rodillos, rotores, etc

### Características del rompevirutas VH

Para un buen control de viruta en mecanizado pesado (tipo general)

- Diseñado desde el estudio, para el maquinado pesado
- Buen control de viruta con alto angulo de incidencia
- Amplio filo de corte que provee buena resistencia en el corte
- Unico filo de corte tratado que provee un corte liso
- Optimizado diseño de la rompeviruta mejora control de virutas

### Características del rompevirutas VT

Para una larga vida útil de la herramienta y un corte estable (avances más altos, gran profundidad) en mecanizado pesado

- Diseñado desde el estudio, para el maquinado pesado
- Diseño resistente que provee larga vida y un corte estable (2angulos de inclinación en el filo de corte)
- Variedad de filos de corte (fino de corte reforzado)
- La posicion convexa de la rompevirutas (desvía el calor de mecanizado, optimiza insertos de desgaste y absorber los golpes)

### Rango de Aplicaciones

**GH** :  $ap(mm) = 5.0\sim 12.0$ ,  $fn(mm/rev) = 0.55\sim 1.20$

**VH** :  $ap(mm) = 6.0\sim 15.0$ ,  $fn(mm/rev) = 0.70\sim 1.40$

**VT** :  $ap(mm) = 7.0\sim 17.0$ ,  $fn(mm/rev) = 0.75\sim 1.60$

## Características rompe virutas

### Rompe virutas LW/VW [ Para maquinado de alto avance ]

- Mejora la productividad debido a su alto rango de avance y superficie de acabado
- Resistencia al desgaste y dureza mejoradas

#### ➤ Características del rompevirutas LW

[Para corte medio]

- **Filo de corte curvilíneo** - Reducción de las fuerzas de corte
- **Filo de corte diseñado p/el corte en profundas profundidad de corte**
  - baja carga de corte & reducción de calor
- **Rompeviruta diseñada para profundidades de corte superficiales**
  - Excelente diseño del rompeviruta y buen control de la viruta
- **Para profundidades de corte superficiales y baja carga de corte**
  - Diseño 3dimensional en las esquinas

#### ➤ Características del rompevirutas VW

[Para corte medio]

- **Excelente para aplicaciones de acabado** - Excelente control de virutas
- **Inserto diseñado para una estable sujeción** - Rompeviruta diseñada cerca del borde de corte
- **Filo de corte similar de C/B para corte medio** - Filo de corte resistente
- **3 Diseño 3dimensional del filo de corte**
  - Reduce la fuerza de corte, buen control de viruta en profundidades de corte

#### Rango de Aplicaciones

#### Inserto Wiper

Wiper

- Alta productividad
- Superficie de desbaste mejorada
- Su alto avance reduce el tiempo de maquinado
- Vida útil de la herramienta mejorada debido a la reducción de la carga de corte

# Características rompe virutas

## SR/SH Chip Breaker new [ Para mecanizado de ejes ]

- Especializado para el mecanizado de barras o ejes de diámetros pequeños y paredes delgadas
- Ángulo de ataque positivo para reducir la resistencia al corte
- Para mecanizado de acero y acero inoxidable

### Características del rompevirutas SR

[Para acabado]

- El primer rompevirutas recomendado para mecanizado de ejes
- Para acabado en corte continuo
- Mejor evacuación de virutas y del calor gracias al ángulo de ataque altamente positivo y a la forma tridimensional
- Buen acabado superficial
- Fracturas prevenidas debido al filo con chaflán

### Características del rompevirutas SH

[Para corte medio]

- Geometría especializada en cortes interrumpidos y corte medio
- Evacuación eficiente del calor generado en corte gracias a la forma cóncava del rompevirutas

#### Evaluación del acabado superficial

Rompevirutas SR

Acabado superficial mejorado

Otros rompevirutas

#### Rango de aplicación de ambos rompevirutas

| Mecanizado       | C/B             | ap(mm)           | fn(mm/rev)         |
|------------------|-----------------|------------------|--------------------|
| Medio a desbaste | Sin rompeviruta | 1.5 ~ 5.0        | 0.20 ~ 0.55        |
| Corte medio      | SH              | 1.5 ~ 5.0        | 0.15 ~ 0.50        |
| <b>Acabado</b>   | <b>SR</b>       | <b>1.0 ~ 4.5</b> | <b>0.12 ~ 0.45</b> |

## Información Técnica de Insertos para Aluminio

### ➤ Rompeviruta AK especial para Aluminio

- El diseño único de la superficie del Inserto proporciona un excelente flujo de la viruta y rompiendo el excedente al mismo tiempo dándole al Inserto un mayor tiempo de vida debido a su baja carga de corte
- El alto ángulo de corte principal reduce la carga y prolonga la vida de la herramienta
- Su forma brinda un mejor desahogo de la viruta en el maquinado

- 1 Baja carga de corte debido al ángulo de alta incidencia y al novedoso diseño de rompeviruta.
- 2 Ángulo de incidencia único - Rompeviruta que brinda un excelente flujo de virutas
- 3 Cara superior 3dimensional unica - Excelente para superficies rugosas & mejor rendimiento de vida
- 4 Novedoso patron de Rompeviruta & forma del filo - Distribuye la carga de corte brindando mayor vida al Inserto
- 5 Cara superior pulida - Excelente maquinado, Evita la adherencia de material al filo y excelente control de virutas.

### ➤ Rompeviruta AR especial para aluminio

- La rompeviruta AR brinda confiabilidad y buen desempeño de corte con gran avance y alta velocidad en maquinado intermitente

- 1 El filo plano puede soportar grandes cargas de corte originadas por la alta velocidad de maquinado y alimentación para un maquinado eficiente.
- 2 El pulido en la cara superior del Inserto garantiza la no adherencia del material al Inserto así como un buen flujo de la viruta.
- 3 Tecnología propia de KORLOY aplicada para filo de corte en forma de esquina para tener mejor control de viruta y alargar la vida de la herramienta.
- 4 Rompeviruta de diseño especial de KORLOY proporciona un mejor flujo de virutas a alta velocidad de maquinado.

### ➤ Rompevirutas AK y AR desarrolladas especialmente para aluminio

|    | Rango recomendado                                       | Grados  |
|----|---|---|
| AK | $a_p = 0.1 \sim 5.0$ mm<br>$f_n = 0.03 \sim 0.5$ mm/dev | H01 (Carburo sin recubrimiento K10~K20)<br>ND1000 (Recubrimiento de Diamante)<br>PD1000 (Recubrimiento DLC) |
| AR | $a_p = 0.5 \sim 6.0$ mm<br>$f_n = 0.05 \sim 0.6$ mm/dev | H01 (Carburo sin recubrimiento K10~K20)<br>ND1000 (Recubrimiento de Diamante)<br>PD1000 (Recubrimiento DLC) |

### ➤ Características del grado H01 y condiciones de corte

- Adecuado para aluminio y mecanizado de aleaciones de acero. Superficie tratada para reducir el filo de aportación
- Geometría tridimensional diseñada para reducir la resistencia de corte y asegurar una buena maquinabilidad a altas velocidades de corte y de avance

# B Información técnica SAVE TURN

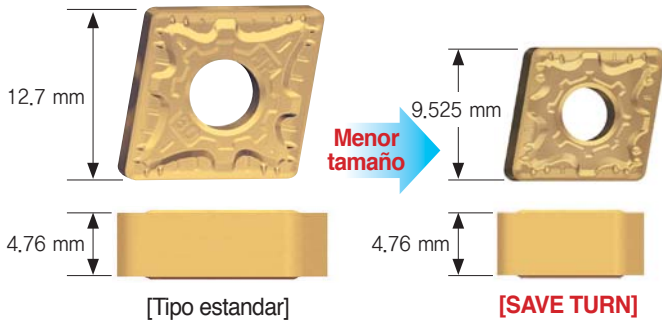

Inserto pequeño y económico con un potente rendimiento de corte

## SAVE TURN

- Inserto de torneado muy recomendado para mecanizar diámetros más pequeños que Ø100
- Inserto pequeño pero poderoso y económico que funciona igual que el tamaño estándar  
Inserciones bajo la profundidad de corte de 3,0 mm

### Características

#### Comparación de tamaños de Insertos

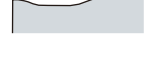

- Tamaño optimizado del mismo rendimiento que el tipo estándar

#### Comparación de rendimiento de corte

- Realiza las mismas inserciones de tipo estándar  
Bajo la profundidad de corte de 3.0 mm

### Características del rompevirutas

| Forma del Inserto   | Filo de corte   | Características   |
|---|---|---|
|  |  | <ul style="list-style-type: none"> <li>• Para el acabado de acero</li> <li>• Rotura eficiente de viruta y bajo corte. resistencia</li> <li>• Varias aplicaciones disponibles en baja profundidad de corte</li> <li>• Profundidad de corte recomendada: 0.5~2.5 mm</li> </ul>  |
|  |  | <ul style="list-style-type: none"> <li>• Para corte medio de acero</li> <li>• 4 puntos para mejorar el control de chip en el medio corte a acabado</li> <li>• Evacuación estable de viruta a alta profundidad de corte</li> <li>• Vida de la herramienta estable debido a menores cargas de corte en alta alimentación</li> <li>• Profundidad de corte recomendada: 0.5~4.0 mm</li> </ul> |
|  |  | <ul style="list-style-type: none"> <li>• Para corte medio de acero inoxidable</li> <li>• Limita la deformación plástica causada por el calor</li> <li>• Vida de herramienta estable gracias al equilibrado Rendimiento de corte y tenacidad</li> <li>• Flujo estable de virutas a altas velocidades y avances</li> <li>• Profundidad de corte recomendada: 0.5~5.0 mm</li> </ul>          |

### Área de aplicación del rompevirutas

- VQ** : Profundidad de corte, ap = 0.5~2.5 mm / Avance, fn = 0.05~0.30 mm/rev
- MP** : Profundidad de corte, ap = 0.5~4.0 mm / Avance, fn = 0.15~0.40 mm/rev
- MM** : Profundidad de corte, ap = 0.5~5.0 mm / Avance, fn = 0.10~0.40 mm/rev

### Ejemplo de aplicación

#### Acero aleado (SCM440)

- **Condiciones de corte** vc (m/min) = 250, fn (mm/rev) = 0.25  
ap (mm) = 2.0~3.0, Corte continuo, con refrigerante

- **Resultados**

## Auto Tools (Tipo ISO)

- Insertos ISO para tornos automáticos.
- Forma R precisa con el uso de tolerancia inferior de la nariz R
- Clase de tolerancia lo suficientemente precisa como para no tener que ajustar herramientas con el uso de la altura del filo de precisión
- Hoja afilada para un excelente control de viruta y rugosidad de la superficie con baja fuerza de corte
- Herramientas de alta precisión para instrumentos eléctricos / electrónicos y instrumentos médicos

### 🔄 Codificación de Insertos (Tipo ISO)

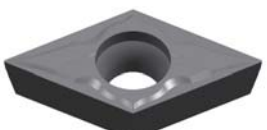

### 🔄 Rompeviruta KF / KM, rectificado para ranurado

- Rompevirutas con filo afilado
- Insertos de alta precisión de tolerancia clase E con radio de punta preciso

| KF  | KM   |
|---|--|
|  <ul style="list-style-type: none"> <li>• Para el acabado</li> <li>• Baja carga de corte con afilado los bordes de corte</li> <li>• Mayor vida útil de la herramienta debido a una menor Resistencia a la evacuación de viruta en alta velocidad</li> <li>• Excelente rugosidad superficial</li> </ul> |  <ul style="list-style-type: none"> <li>• Para corte mediano a refinamiento</li> <li>• Mejor flujo de viruta debido al ancho bolsillos de chip</li> <li>• Mayor vida útil de la herramienta y mejor acción de corte debido a evacuación de viruta mejorada</li> <li>• Excelente rugosidad superficial</li> </ul> |

### 🔄 Rompe virutas VP1/MS

- Rompevirutas exclusivo para materiales difíciles de cortar, como aleación de titanio, Inconel, acero inoxidable, etc.
- Reducción al mínimo del calor de corte al reducir el área de contacto entre las virutas y la superficie del rastrillo con el uso de una cuchilla positiva alta

| VP1  | MS   |
|--|--|
|  <ul style="list-style-type: none"> <li>• Filo de corte resistente para operaciones intermedias</li> <li>• El rompevirutas presenta unos canales con un ancho óptimo garantizando un buen mecanizado en distintas profundidades de corte</li> </ul> |  <ul style="list-style-type: none"> <li>• Buen acabado superficial en operaciones intermedias</li> <li>• Previene la soldadura de material o filo de aportación en mecanizado de titanio</li> <li>• Aumento de la evacuación de virutas en mecanizado a velocidades elevadas de avance</li> <li>• Protección del filo debido a la geometría diseñada para una buena evacuación de virutas</li> </ul> |

# Auto Tools (KHP Coolant)

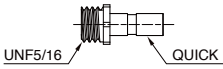

- Refrigerante de alta presión KORLOY para una alta productividad del torno automático
- Soporte de refrigerante de alta presión para una alta productividad del mecanizado preciso de piezas en torno automático
- Refrigeración mejorada y control de viruta debido a la inyección de refrigerante a través de dos orificios hasta el borde de corte principal y la punta R concéntricamente
- Dos orificios con diferentes ángulos de inyección entre sí aumentan el control de viruta
- El sistema de sujeción fácil de adaptador de manguera rápida y manguera rápida proporciona un uso conveniente

## Structure of holder

※ El adaptador rápido y la manguera rápida no está incluido en la compra del porta (Compra por separado)

# Auto Tools (Tipo Blade) **new**

- Inserto de cuchilla para tornos automáticos
- Para el mecanizado exterior de piezas pequeñas precisas
- 4 tipos: SSB (para dar marcha atrás), SGB (para ranurado), SBT (para roscar), SBC (para cortar)
- Uso conveniente de un soporte para todos los insertos de cuchillas
- Soporte exclusivo para la acción de corte cercano al husillo secundario

## ➤ Codificación de Insertos (Tipo Blade)

## ➤ Tipos de inserto de cuchilla

Possible aplicar varios tipos de insertos de cuchilla a un soporte

**SBB:** For back turning

- Ángulo de entrada: 59°
- Profundidad corte máxima: 4mm
- Radio de punta: : 0.05, 0.1, 0.2 mm

**SBG:** For grooving

- Ancho: 0.5~2.5 mm
- Radio de punta: 0.05 mm

**SBT:** For threading

- Ángulo de entrada: 60°
- Paso: 0.2~1.0 mm
- Radio de punta: 0.05mm

**SBC:** For cut off/Parting

- Ancho de corte: 0.7-2.0
- D max: 16 mm
- Radio de punta: 0.05mm

# B Auto Tools (multiusos)

## Auto tools (multiusos)

- Inserto multifuncional para tornos automáticos
- Para el mecanizado exterior de piezas pequeñas precisas
- 5 tipos: SB (para giro hacia atrás), SG (para ranurado), ST (para roscado), SC (para corte), SGB (para ranurado y giro hacia atrás)
- Uso conveniente de un soporte para todos los insertos
- Desplazamiento "0" a todos los soportes tipo ISO

### ➤ Codificación de Insertos (Tipo Multi utility)

B: Torneado Trasero G: Ranurado  
 C: Tronzado T: Roscado  
 GB : Ranurado & Torneado trasero

### ➤ Ejemplo Aplicación

### ➤ Tipos de insertos multifuncionales

Diferentes tipos de maquinados con solo un Portaherramienta (Ej : Tamaño del orificio del inserto = 06 - sujeción del portaherramientas para insertos)

SG: Ranurado

ST: Roscado

SB: Torneado Trasero

SGB: Ranurado & Torneado trasero

SC: Tronzado

### ➤ Condiciones de corte recomendadas

| Material             | Torneado                       |                     | Condiciones recomendadas de corte |                     | Tronzado                       |                     | Torneado Trasero               |                     |

## Auto tools (Tipo KGT/MGT)

- Inserto de ranurado para tornos automáticos
- Soporte exclusivo para tornos automáticos
- Inserto económico de doble cara
- Fuerte sistema de sujeción asegura un mecanizado estable y precisión
- Una amplia selección de rompevirutas según diversas condiciones de corte, tales como alimentación baja / alta

R: Derecho L: Izquierdo

# B Auto Tools (Micro Boreado de Carburo (MSB))

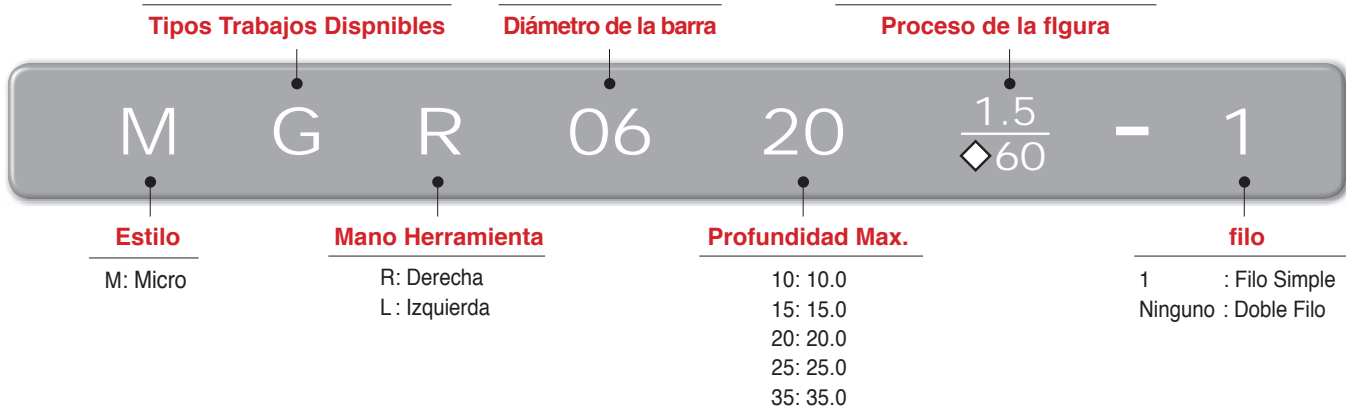

## Auto tools (Micro Boreado de Carburo (MSB))

- El grado perfecto de Korloy asegura vida larga de la herramienta
- Utilizados en diversas aplicaciones (Valvulas, partes medicas, partes automotrices, maquinaria y superconductores)
- Aplicables para varios tipos de maquinados (Interior, Ranurado, Roscado, etc)

# Multi Turn

## ➤ Sistema Codificación

## ➤ Codificación de Insertos

## ➤ Diseño de Herramientas

- Doble sistema de refrigeración
- Excelente sistema de evacuación de virutas

• Diseño eespecial de la flauta que minimiza la acumilación de virutas

※ **Aviso:** la sujeción del inserto debe llevarse a cabo como se muestra en la foto

• Stress minimizado durante el proceso de corte, previniendo así daños por vibración y alargando el tiempo de vida de la herramienta

Diseño Optimizado

## ➤ Filo de corte escalonado

Filo P/Barrenado (Barrenado)

Filo para Torneado (Interno, la externo y careado)

Multi-Turn      Competidor A

- La viruta se evacua con una forma especial gracias a la mejor geometría del filo
- Buena evacuación y control de viruta debido al radio de la punta de radio pequeño

| Comparison                   | Multi turn | Competidor A | Competidor B |
|------------------------------|------------|--------------|--------------|
| Avance<br>fn (mm/rev) = 0.08 |            |              |              |
| Avance<br>fn (mm/rev) = 0.10 |            |              |              |
| Anchura de la viruta(tasa)   | 80%        | 100%         | 120%         |

## Ensamblado de Portalinsertos

### Sistema de Brida Doble

### Sistema de Palanca

### Sistema Brida Amplia

### Sistema de Brida

### Sistema Multi-trabe

### Sistema con Tornillo

## Sistema de brida doble

### Diseño estable de Alta calidad y Precisión

#### Características

- Sistema de sujeción simple y poderoso operado por el tornillo de la brida
- Poderosa sujeción de 2 vías (superior e inferior) conveniente para el maquinado en condiciones de corte muy duras
- Ofrece una mejor precisión, debido al diseño especial de la brida en la parte posterior
- Diseño optimizado y compacto para evitar interferencia con la viruta, así como una mejor sujeción del inserto

## Sistema de Palanca

### Rigidez y estabilidad de amarre excelentes en comparación con los existentes porta herramientas de palanca

#### Características

- El portalinserto ofrece una precisión debido al diseño especial y a la mejora de la palanca de en la punta
- La durabilidad de las piezas se ha mejorado
- Superior Tornillo de la herramienta debido al potente sistema de sujeción y al diseño optimizado de la pieza.
- El diseño de la parte derecha en el cuerpo de portalinserto hace que sea fácil la descripción de cada producto
- Boquilla ajustable del refrigerante da la opción de cambiar de dirección la dirección del flujo de refrigerante. El portalinserto ofrece una precisión debido al diseño especial y a la mejora de la palanca de en la punta

**Nota)** Generalmente, dos placas son sujetado por la portainsero cerámica. Sin embargo, sólo una placa es usado para sujetar en los Insertos 1207□□ y 1607□□.

Porta provisto de refrigerante a alta presión para mecanizado de inconel

# KHP Coolant **new**

## Porta provisto de refrigerante a alta presión de KORLOY

- Aumento de la productividad en un 300% en el mecanizado de Inconel comparado al sistema de refrigerante de baja presión
- El enfriamiento, la vida útil de la herramienta y el control de viruta son mejorados con el sistema de inyección multidireccional de refrigerante a alta presión

### 🔧 Estructura de porta

### 🔧 Características

- Diseñado para mantener una distancia óptima entre el inserto y el orificio de la boquilla y el lugar ideal del orificio del chorro
- Presión de pérdida maximizada de la presión del refrigerante debido al diseño aerodinámico de la ruta interna
- Fácil sujeción del inserto y la boquilla gracias al sistema de acoplamiento deslizante

### La máxima barra 300

| Pieza de trabajo | Presión mínima | Presión máxima |
|------------------|----------------|----------------|
| P                | 50             | 300            |
| M                | 70             |                |
| K                | 60             |                |
| N                | 50             |                |
| S                | 70             |                |

### Abrazadera con boquilla refrigerante

### Abrazadera refrigerante con tres conductos de refrigeración

# B Información técnica para KHP Coolant

## La manera de usar la abrazadera refrigerante

## Rango de aplicación

Aleaciones termorrresistentes, Inconel

Aleaciones termorrresistentes, Titanio

## Gama de grados

Aleaciones termorrresistentes, Inconel

Aleaciones termorrresistentes, Titanio

## Cómo sujetar el KHP

- 3 tipos de sistemas de instalación facilitan la sujeción
- La manguera tipo doblado proporciona un área más amplia para el mecanizado que otros tipos

※ Se incluye un sello de aceite que proporciona una sujeción fácil

※ La sujeción banjo facilitan la sujeción y permiten una variada sujeción del porta a la máquina de torneado

## Componentes de KHP

- Los componentes del refrigerante a alta presión se venden por separado
- Varios componentes están disponibles de acuerdo con los diferentes sitios de mecanizado y utiliza mecanizado con refrigerante a alta presión

## Instrucciones Ensamblado Barras Interior

### Sistema de Brida Doble

### Sistema de Palanca

### Sistema de Brida

### Sistema Multi-trabe

### Sistema con Tornillo

## Barra de carburo

- Excelente rendimiento de corte incluso en el mecanizado interno con vibración
- Disponible para diversas piezas, como acero, acero inoxidable, hierro fundido, etc.
- Mejora la vida de la herramienta y la rugosidad de la superficie

### Características

Mayor resistencia y durabilidad que el vástago de acero, tratamiento de superficie especial aplicado

### Comparación de astillamiento

| Especificaciones           | Barra de acero      |      |      | Barra de carburo |      |      |
|----------------------------|---------------------|------|------|------------------|------|------|
|                            | Mayor astillamiento |      |      | Vida estable     |      |      |

↻ Insertos Aplicables B62~B65

### Características del Sistema de Brida Doble (Barra para Interior)

Alargamiento de tiempo de uso de la herramienta, debido al orificio de refrigeración ajustable en la herramienta.

➤ Insertos Aplicables B89

• Use left handed insert for right handed holder

✳ Refieran a las mangas aplicables en la página de 136.

2 lados de retención - lateral y la parte cónica

# Herramienta con Sistema HSK

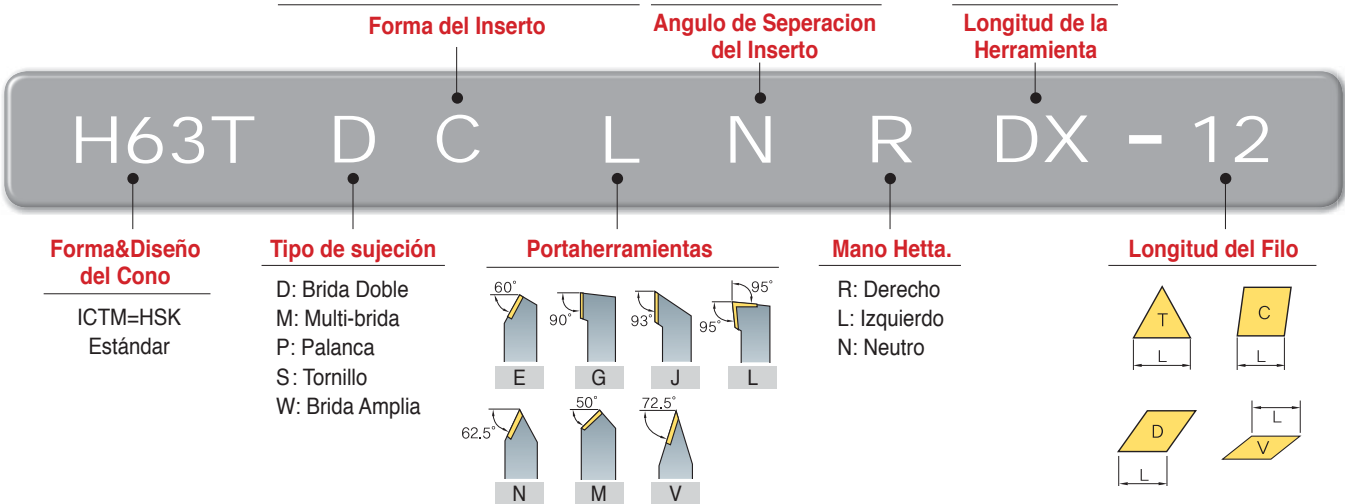

[Para Maquinado de tareas múltiples]

- 2 sides restraint - lateral y la parte cónica
- Resistencia garantizada para los movimientos estáticos y dinámicos
- Precisión garantizada en direcciones repetitivas del eje
- Recomendable para trabajos a alta velocidad
- Recomendable para trabajos con piezas pequeñas
- La boquilla del Refrigerante se puede ajustar con facilidad

## ➤ Sistema Codificación Herramientas

 V: 35° Rombo    W: 80° Hexagonal    L: 140  
 N = 0°    B = 5°

## ➤ ICTM (Comité de la Interfaz para Torneado)

• Interfaz para tareas múltiples en máquinas de torneado que es el sistema de herramientas basada en el estándar ICTM con la cooperación de las principales 17 empresas japonesas. Compatible con los sistemas convencionales HSK-tipo A y comúnmente con las máquinas múltiples tareas y los centros de maquinado.

## ➤ Tolerancia de la muesca de sujeción ha sido mejorada: HSK-T63

## ➤ Comparación en Tolerancias (Ejemplo) (mm)

| Observaciones         | Tolerancia Maxima | Tolerancia Minima |
|-----------------------|-------------------|-------------------|
| ICTM STANDARD HSK-T63 | 0.075             | 0.035             |
| ISO STANDARD HSK-A63  | 0.33              | 0.08              |

# B Información técnica para el sistema de adaptación KM

3 tipos de retención - Precisión superior

## Herramienta con Sistema KM

[Para Tareas Múltiples]

- Sujeción con 3 caras de contactos / Precisión superior
- Sistema flexible de Fijación / Rigidez Superior
- Varios tamaños y estilos
- Apropriados para Torneado y fresado
- Dirección del refrigerante ajustable con boquilla de refrigerante

**Ranurado Frontal**

**Tonzado**

## Torneado y Ranurado

### Selección del inserto

- Avance
  - Decidir el avance máximo después de tener en cuenta las características de la placa y de las características de la máquina ( $F_{max} = W \times 0.075$ )
  - El avance máximo no puede ser mayor que el radio de punta de la placa.
  - En ranurado, los problemas en la evacuación de la viruta pueden ser resueltos interrumpiendo el avance a pequeños intervalos.
- Profundidad de Corte
  - La profundidad mínima de corte debe ser mayor que el radio de punta de la placa
  - Al decidir la profundidad de corte máxima por favor tener en cuenta la carga sobre la máquina
  - La flexión de la pieza de trabajo y el ángulo de flexión se pueden cambiar dependiendo de la forma de la placa elegida.

### Aviso para torneado

- Las herramientas KGT/MGT están diseñadas para soportar la fuerza de corte lateral producida por el ángulo de flexión; esta característica ofrece una ventaja sobre las placas ISO estándar.
- La placa estándar MGT También ofrece un efecto "wiper" que mejora la superficie de acabado

### Aviso para acabado (compensación necesaria)

- Una vez alcanzado el diámetro a ranurar, la operación de cilindrado puede causar flexión en la pieza de trabajo. En estos casos siga la formula mostrada, compensando estos factores conseguirá el diámetro deseado.
- Para eliminar la diferencia en el diámetro usando el ángulo de flexión (que se produce generalmente durante la operación final de cilindrado) seguir las instrucciones del párrafo superior cuando mecanice. Para obtener una buena superficie de acabado sin compensar en la aplicación siga las instrucciones siguientes:
  - 1) Ranure hasta el diámetro deseado
  - 2) Retire la herramienta hasta una distancia igual a  $\theta/2$
  - 3) Siga con la operación de cilindrado hasta el diámetro deseado

### Aviso para las aplicaciones de torneado MGT

- Las herramientas KGT/MGT están disponibles para ranurado y cilindrado como solución multifuncional. Al usar la herramienta M.G.T tenga en cuenta que la herramienta imita el comportamiento de una herramienta ISO estándar. En la operación de cilindrado se aprovecha el ángulo de flexión teniendo en cuenta la fuerza de corte y la profundidad de pasada. Esto posibilita un desgaste normal en la placa, después del cilindrado un proceso de ranurado puede no cumplir con el diámetro deseado en la pieza de trabajo. Para corregir este efecto ajuste la herramienta 0.01mm y vuelva a la posición original de la aplicación de ranurado.

### Mecanizado de una pieza con un radio mayor que el radio del inserto

Estabilizar la presión de la herramienta. Las herramientas KGT/MGT generan una presión excesiva de corte cuando se mecaniza una pieza con un radio mayor al de la herramienta. La fuerza de corte desigual podría romper la placa o el soporte

## Torneado y Ranurado

### Inserto

#### Aplicaciones del ángulo frontal

- 4°- Tubos (Tuberías y barra perforada)
- 6°- Tubos y barras macizas
- 8°- Barras macizas
- 15°- Barras macizas de pequeño diámetro

#### Ángulo frontal 0° (Neutral)

- Tronzado en barras macizas
- Queda un tetón central al separarse
- Previene la flexión de la pieza debida a la dirección de corte durante el tronzado
- Aplicable a tronzado profundo

#### Ángulo frontal 4°~8°

- Reduce el tetón central al tronzar barras macizas.
- Reduce la rebaba en el tronzado de tubo o barra perforada

#### Ángulo frontal 8°~15°

- Tronzado de barras de diámetro pequeño y barra perforada
- Reduce la rebaba y el tetón central en el tronzado de barras de pequeño diámetro o barra perforada

※ Insertos disponibles: MGMR/L□□□ - □□ - LP/RP, KGMR/L□□□ - □□ - PS/PT  
(Angulo frontal) (Angulo frontal)

### Selección del inserto

- Para una buena aplicación de la placa, se deben tener en cuenta los siguientes factores
  - Ancho de la placa
  - Rompevirutas
  - Calidad y radio de punta R
- La relación entre el ancho de la placa y la profundidad de corte
  - Las placas tipo neutro, con 0-grados de ángulo frontal son la mejor solución en aplicaciones de máxima profundidad
  - En acero de uso corriente, la profundidad de corte máxima =  $W \times 0.8$
- Placas con ángulo frontal
  - Para reducir rebabas, recomendamos usar placas con ángulo frontal.
  - Las placas con ángulo frontal grande reduce la formación de rebabas, pero también la vida de la placa
  - En el caso que las rebabas sean aceptables, recomendamos usar una placa neutra

### Ajuste del soporte

- La posición de la arista de corte debe ser fijada en la posición exacta del eje de corte a fin de obtener una dirección de corte perpendicular a 90° que minimice la vibración durante el mecanizado.

### Ajuste para el tronzado

- En general la altura de la arista de corte debe estar entre  $\pm 0.1\text{mm}$  respecto al centro
  - La operación de tronzado debe realizarse lo más cerca posible del plato para minimizar vibraciones

### Aviso

- Mantener la velocidad de corte y el avance constantes
- Usar la cantidad correcta de refrigerante para un mejor rendimiento
- Limpiar correctamente el alojamiento del soporte antes de montar la placa

### USO

- Si la placa está gastada, cambie inmediatamente la placa para prevenir posibles daños en la pieza de trabajo
- Si el asiento del soporte está deformado o dañado, reemplácelo por uno nuevo inmediatamente para obtener una fijación estable
- No modifique o rectifique el asiento del soporte.

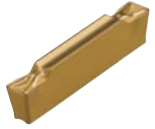

### Selección del rompevirutas

- Nuestros rompevirutas están diseñados para reducir el tamaño de las virutas en operaciones de ranurado. Las virutas pequeñas ofrecen las siguientes ventajas:
  - Disminuye el contacto entre la viruta y la pieza. Esto generalmente ofrece un mejor acabado superficial
  - Con un mejor flujo de viruta, el operario puede aumentar los avances debido a la disminución de la carga de corte.

## Herramientas para ranurado frontal

### Para ranurado poco profundo

- Herramientas económicas debido al uso de placas con dos puntas
- Nuevo diseño de rompevirutas con mayor control en diversos procesos de ranurado frontal
- El sistema de ranurado frontal KORLOY ofrece varias familias de soportes para un mejor aprovechamiento y beneficio

|   |   |   |   |
|---|---|---|---|
| <b>MFMN300</b>  | <b>MGMN400</b>  | <b>Horizontal MGFHR</b>   | <b>Vertical MGFVR</b>   |
|  |  |  |  |
| Ancho de corte 3mm  | Ancho de corte 4mm  | Dia.mecanizado Ø24~200mm  | Dia.mecanizado Ø24~60mm   |
| <b>KGMM300~600</b>  |   | <b>Horizontal KGFHR</b>   | <b>Vertical KGFVR</b>   |
|  |   |  |  |
| Ancho de corte 3-6mm  |   | Dia.mecanizado Ø34~220mm  | Dia.mecanizado Ø44~200mm  |

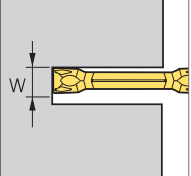

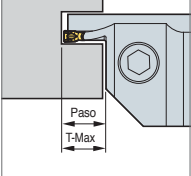

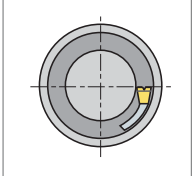

### Para ranurado profundo

- Estas herramientas se usan en ranurado profundo con placas de una sola punta (Tmax 25mm)
- La variedad de rompevirutas permite al operario aplicar varias estrategias de mecanizado
- La variedad de soportes permiten cubrir una amplia gama de aplicaciones

|  |  |  |  |  |
|--|--|--|--|--|
| <b>FGD</b>   | <b>FGM</b>   | <b>FMM</b>   | <b>Horizontal FGHH</b>   | <b>Vertical FGVH</b>   |
|  |  |  |  |  |
| Ranurado frontal profundo (Clase G)  | Ranurado y torneado frontal (Clase G)  | Ranurado y torneado frontal (Clase M)  | Dia.mecanizado Ø25~140mm   | Dia.mecanizado Ø25~140mm   |

### Sistema de selección del soporte

- Aplique estas tres simples indicaciones para seleccionar la placa y soporte adecuados a su necesidad

|   |  |   |   |   |   |
|---|--|---|---|---|---|
|  | <b>Inserto y soporte</b><br>Elija una placa y un soporte que se adapte a su proceso en función del ancho y la profundidad de corte necesarios. |  | <b>Soporte Tmax</b><br>Use el soporte con el menor voladizo posible que permita a la vez la profundidad deseada |  | <b>Dia. a mecanizar</b><br>Use el soporte con el mayor mango posible en función del diámetro inicial de ranurado que requiera la operación a realizar |
|---|--|---|---|---|---|

**Aviso:** Para minimizar la vibración use el soporte más corto de acuerdo con Tmax.

### Optimización de ranurado frontal

**Debaste:** Cuando ranure frontalmente disminuya la velocidad de corte en un 40% respecto a un refrentado normal

- Ranurando el diámetro inicial
- Refrentado alejándose del centro
- Refrentado hacia el centro

**Acabado:** Cuando ranure frontalmente disminuya la velocidad de corte en un 40% respecto a un refrentado normal

- Ranure al diámetro inicial hasta la profundidad final y refrente alejándose del centro
- Operación de copiado hasta la profundidad final
- Refrente hacia el centro
- Ranure hasta la profundidad real que necesite

### Aviso para el ranurado frontal

- Antes de proceder verifique y ajuste la siguiente posición del soporte

- Verifique la altura de la arista de corte respecto del centro de la pieza
- Mecanice hacia el centro y verifique las rebabas

- Para una mejor rugosidad superficial, posicione la placa completamente perpendicular a la superficie de trabajo

Mecanizado multifuncional con sistema de amarre reforzado y nueva tecnología

# KGT

- Insertos de doble cara de KGT que reducen el costo de mecanizado
- Fuerte sistema de sujecion asegura un mecanizado estable y preciso
- El nuevo grado y la nueva tecnologia proporcionan una vida util superior de la herramienta
- Varias soluciones de herramientas de KGT mejoran la productividad.
- Filos de corte en la parte delantera y en la cara del inserto, hacen estos insertos optimos para ranurado, tronzado y torneado logitudunal y frontal reduciendo el tiempo de maquinado.
- El rompevirutas tridimensional asegura un excelente control de viruta en varias aplicaciones
- Insertos KGT con varios rompevirutas estan disponibles para una amplia gama de aplicaciones
- Disponibles bordes de corte especiales (cotizacion especial)

◎ Primera elección, ○ Segunda elección

## Características

### Parte superior (Placa)

- Fijación fuerte → Mayor fiabilidad de mecanizado
- Autocentrado → Mayor precisión
- Diseño antivibración → Acabado superficial fino

**Índice rompevirutas**

**L Para Ranurado ligero.**

- filo de corte afilado
- mecanizado de bajo avance
- para componentes de pequeño diámetro
- acero bajo en carbono
- aleaciones de acero
- acero inox

**R Para Ranurado de desbaste.**

- filo fuerte
- mecanizado de gran avance
- corte interrumpido
- acero al carbono
- aleación de acero
- acero inoxidable
- fundición

**T Para torneado y ranurado múltiple**

- filo agudo
- mejor control de viruta
- mecanizado de torneado y ranurado
- acero al carbono
- aleaciones de acero
- acero inoxidable
- fundición

**C Para mecanizado en copiado y en relieve**

- mejor control de viruta
- copiado
- relieve
- acero al carbono
- aleación de acero
- acero inoxidable
- fundición

**LP Para Tronzado ligero**

- filo agudo
- mecanizado de alto avance
- corte interrumpido
- mano derecha y izquierda
- acero al bajo carbono
- acero al carbono
- aleación de acero
- acero inoxidable

**RP Para Tronzado de desbaste**

- filo fuerte
- mecanizado de alto avance
- corte interrumpido
- mano derecha y izquierda
- acero al carbono
- aleación de acero
- fundición

# C Información técnica para KGT

## B Para ranurado de precisión

- inserto rectificado
- tolerancia precisa
- diversos radios y anchos de inserto
- acero al carbono
- aleación de acero
- acero inoxidable
- fundición

## A Para ranurado de aluminio

- filo agudo
- tolerancia precisa
- aleación de aluminio
- aleación de cobre

## Grados para el rango de aplicación recomendado

| Pieza de trabajo         | grado  | Orden de grados recomendados | Velocidad de corte recomendada (m/min) |     |     |     |     |  |
|--------------------------|--------|------------------------------|--|-----|-----|-----|-----|--|
|                          |        |                              | 50                                     | 100 | 150 | 200 | 800 |  |

## Ejemplos de aplicación

### Mecanizado multifuncional

### Repetición de torneado + ranurado

Geometría optimizada para torneado + ranurado - Alta eficiencia.

- **Pieza de trabajo** SM45C
- **Condiciones de corte**
  - vc = 170 (m/min)
  - fn = 0.15 (mm/rev)
  - ap = 2 mm
  - W = 3 mm
  - Con refrigerante

■ **Denominación** KGMN300-04-T (PC5300)

30% mayor

### Ranurado

### Ranurado en escuadra

Geometría tenaz para ranurado interrumpido y profundo.

- **Pieza de trabajo** X5CrNi18-9
- **Condiciones de corte**
  - vc = 120 (m/min)
  - fn = 0.12 (mm/rev)
  - ap = 5 mm
  - W = 4 mm
  - Con refrigerante

■ **Denominación** KGMN400-03-R (PC5300)

30% mayor

### Mecanizado de ejes

### Ranurado (desbaste) y torneado (acabado)

Excelente control de viruta para una mayor eficiencia.

- **Pieza de trabajo** 42CrM04
- **Condiciones de corte**
  - vc = 150 (m/min)
  - fn = 0.15 (mm/rev)
  - ap = 5 mm
  - W = 3 mm x 3
  - Con refrigerante

■ **Denominación** KGMN300-04-T (PC5300)

30% mayor

### Tronzado

### Tronzado de tubos

Exclusivo rompevirutas para tronzado que asegura una mayor vida útil de la herramienta. / Geometría afilada, menos rebabas.

- **Pieza de trabajo** X5CrNi18-9
- **Condiciones de corte**
  - vc = 140 (m/min)
  - fn = 0.15 (mm/rev)
  - ap = 2 mm
  - W = 3 mm
  - Con refrigerante

■ **Denominación** KGMR300-6D-LP (PC5300)

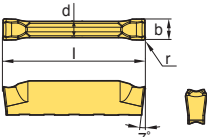

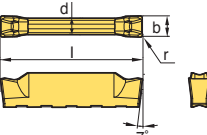

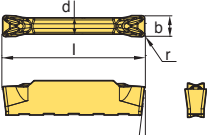

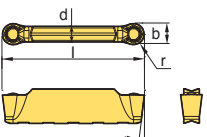

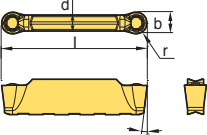

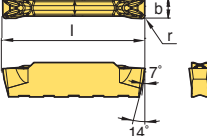

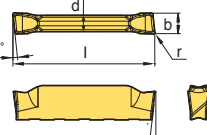

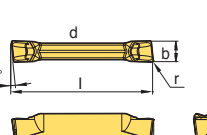

45% mayor

➔ Insertos Aplicable C12~C13

• 200, 300, 400 Insertos : Insertos Internales, KGMI o KRMLV

## Sistema KGT para tronzado

### Características

- Tronzado usando las placas KGT ya existentes
- Mecanizado más económico con las placas de doble cara
- Diseño especial de la ranura para mejor fijación
- Llave especial para el cambio fácil de placa

### Sistema de codificación

### Cómo fijar la placa

① Inserto el pin de la llave en el agujero de la lama

② Gire la llave en 45-160 para abrir el asiento e inserte la placa

③ Gire la llave nuevamente a la posición original para fijar la placa

Insertos Applicable C12~C13

(1) Tornillo de fijación (2) 1 asiento (3) 2 asientos (4) Placa de una punta

Insertos disponibles con 2 filos, para un maquinado más económico.

# MGT

- Insertos disponibles con 2 filos, para un maquinado más económico
- Operaciones Multifuncionales : Reduce el tiempo del ciclo y aumenta la productividad con la capacidad de: Ranurar, Carear, Copiar o Tornear en una sola aplicación
- Reducción de costos y tiempos : El sistema MGT de Korloy permite al operador usar una herramienta para diferentes aplicaciones, reduciendo así el número de herramientas a utilizar
- Filos de corte planos : Las herramientas MGT tienen una geometría plana en el filo de corte, asegurando así una excelente terminación. Aún en aplicaciones de gran avance al usar la función Wiper, Korloy asegura una excelente calidad superficial incluso en operaciones de desbaste

## Tipo de cartucho KGT/MGT

### Figura

- Compatibles y económica gracias al cartucho dividido y sistema de soporte Exclusivo de sistema existente solo cuerpo
- Cartucho Intercambiable
  - Varios montaje depende de estilo de trabajo
  - Reduce los costos de herramienta de corte más de un 30%
  - Marco con el tornillo de la abrazadera superior y lateral
- Ajuste fuerte y estable
  - Montaje simultáneo de insertar el cartucho y
  - Fácil montaje y cambio de herramienta
- Estable sistema de montaje
  - Simple y Superior sistema de ajuste

Ensamblado estable gracias a la doble tornillo y la abrazadera

Sistema simple y resistente ayarlama

## Información técnica para MGT Rueda de aluminio

- Características**
- Insertos diseñados para un maquinado óptimo en Rines de Aluminio.
  - Mayor tiempo de vida de la herramienta cuando se ajusta con el menor grado para la aplicación.
  - Mecanismo unico de sujeción que brinda firmeza al inserto
  - Una variedad de tipos de insertos para aplicaciones multiples

### Tipos de Insertos

MRGN Tip: Tamamen "Yuvarlak" geometry

| MRGN-A(para general)  | MRGN-A5(Para Copiado)   | MRGN-AM(Acabado Medio)  | MRGN-AP(PCD)   | MVGN-A(Para Acabado Fino)   |
|---|---|---|--|---|
|  |  |  |  |  |
| Angulo Agudo de incidencia, Filovivo  | Fuerza de brida reforzada   | Para fundicion Ductil   | Control de Virutas Mejorado  | Alto Angulo de incidencia y Relieve   |

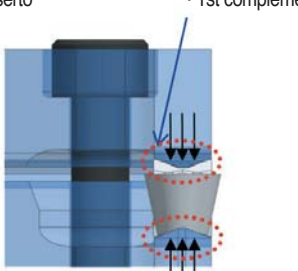

### Nuevo sistema de Brida

• Centrador del Inserto

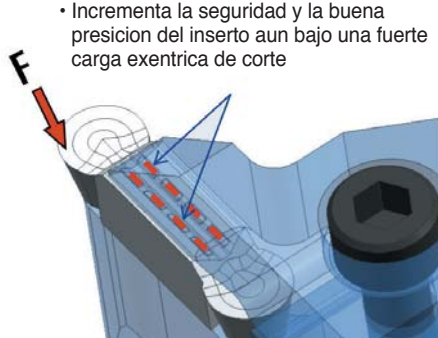

**Antes de Apretar**

• 1st complemento de la brida

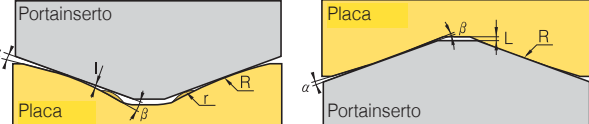

**Despues de Apretar**

• Incrementa la seguridad y la buena precision del inserto aun bajo una fuerte carga exentrica de corte

• Reforzada fuerza de de fijacion debido al diseño de el lado de latapa y de la parte inferior del inserto y del punto convexo en la parte superior del inserto

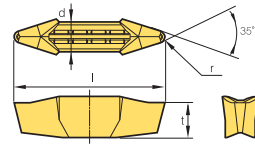

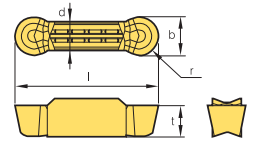

## Aplicación en Rines de Aluminio

## Condición de Corte Recomendada

# C Información técnica para TB/TB-M

## Inserto de 3 puntas para ranurado de alta precisión más económico TB/TB-M

- Inserto de 3 puntas para ranurado más económico
- Rango de tamaños del filo de 1.25~4.5 mm
- Insertos rectificadas con gran exactitud para mecanizado de alta precisión
- Control de la viruta optimizado para procesos automáticos de ranurado

## 🔗 TB-M Características

- Fuerza de corte minimizada a la alta velocidad y en gran avance → Una lisa evacuación de viruta afuera de cada ranura
- Rendimiento de corte de alta precisión → Un excepcional acabado superficial y dimensión precisa
- Un excelente flujo de viruta y resultado de corte → Ideal para automatizado y no tripulado

### Rompevirutas TB5-M

- **Cara trasera rebajada:** reduce la carga mecánica minimizando la fricción de la viruta
- **Rompeviruta con geometría de doble estríabiselado:** proporciona una evacuación suave de las virutas hacia el exterior. Minimiza la carga el corte en el mecanizado de alta profundidad. Formación de virutas manteniendo un tamaño regular
- **Vaciado del filo de corte:** evita el astillamiento del filo de corte y mejora la estabilidad del mecanizado en corte interrumpido
- **Uso:** para ranurado y tronzado de profundidad máxima inferior a 6.5mm

### Rompevirutas TB4-M

- **Estrías centrales:** Controlan la estabilidad de las virutas en mecanizado de alto avance
- **Estrías principales:** Muy buen control de viruta en operaciones de torneado y mecanizado de chaflanes. Facilitan la evacuación de la viruta fuera de la ranura a mecanizar
- **Filos de corte agudos:** Ofrecen un muy buen rendimiento de corte y una calidad muy definida
- **Uso:** para ranurado de profundidad máxima inferior a 4.5mm y torneado

Velocidad de corte recomendada, vc (m/min)

## Rango de aplicación

C

**TB5-M rango de maquinado (profundidad)**

- Hay un límite para los diámetros de corte de TB5-M cuando la profundidad de los cortes es superior a 5 mm  
(Por ejemplo, al cortar con un inserto TB5200N-020-M a una profundidad de 6,2 mm, Ø60 D-MAX está disponible)
- N.L = sin límite

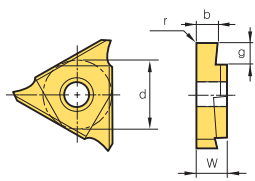

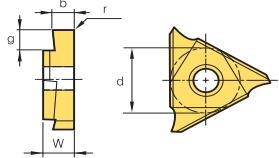

(mm)

# C Información técnica para K Notch

La solución para el ranurado de alta precisión

## K Notch

Herramienta de ranurado KORLOY

- El sistema de sujeción de KORLOY ofrece una alta rigidez para el mecanizado de alta precisión
- Filo de alta calidad que garantiza una larga vida útil de la herramienta y una excelente maquinabilidad
- Proporciona varios anchos de filo para una amplia gama de selección

### ➤ Sistema de codificación de inserto

|                |  |                                   |                           |                                    |  |                             |

### ➤ Características del portaherramientas

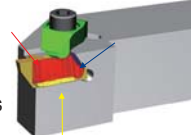

**Brida**

- Fuerza de combinación rígida relativa a la fuerza de fijación de fijación
- Disposición cómoda orientada al usuario

Vista superior de la brida 

**Fijación del inserto**

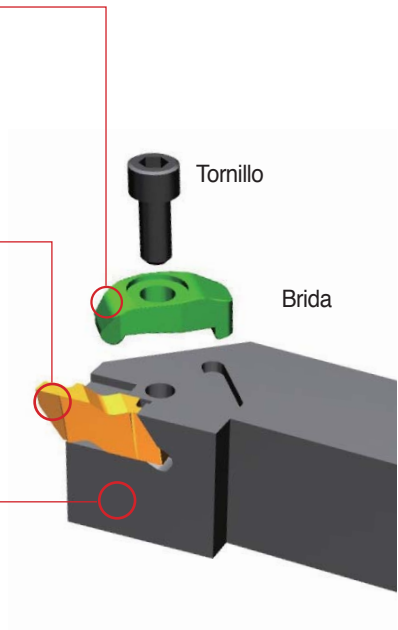

- Proporciona una fijación con una excelente estabilidad gracias a la combinación de la fuerza de agarre en 3 direcciones (parte inferior, lateral y posterior)

Fijación de 3 caras 

**Ángulo de incidencia**

- Ángulo de incidencia lateral de 3°

Tornillo

Brida

## Características de inserto

[ Preparación de filo de alta calidad ]

### Preparación de filo de alta calidad

- Filos de corte en calidad uniforme
- Vida prolongada de la herramienta

[ K Notch ]

[ Competidor ]

### Superficie de la cara de ataque con acabado a modo de espejo

- Resistencia mejorada a la soldadura y astillado
- Mejora el acabado superficial de las piezas de trabajo

[ K Notch ]

Para ranurado profundo y tronzado

# Saw-man

## Características del inserto saw-man para tronzado

- Posibilidad de mecanizar una amplia gama de piezas, como acero, fundición, acero inoxidable, etc.
- Mayor vida útil de la herramienta debido al bajo ángulo de ataque del inserto
- Rebabas minimizadas debido a la ángulo mínimo en punta
- Varios ángulos de avance disponibles
- Control de viruta gracias al diseño de aristas en la superficie del inserto

La solución para tronzado y ranurado profundo

## Saw Man-X

- Mecanizado estable en ranurado profundo aplicando la sistema de sujeción V-Rail con tres cara de sujeción
- Precisión de la sujeción mejorada y reemplazo conveniente de insertos con el uso de la llave exclusiva

### ☞ Sistema de codificación de lama

### ☞ Sistema de codificación de inserto

### ☞ Características

- Sistema de sujeción V-Rail con 3 caras de apoyo - sistema de sujeción más estable
- Nuevo tratamiento del filo de corte - mecanizado de mejor calidad y una larga vida de herramienta
- Rompeviruta superior - Mejor control de viruta
- Llave exclusiva - sistema de sujeción más conveniente

#### V-Rail triple para amarre en tres planos

- Inserto firmemente sujeto en el asiento de la punta
- La vibración minimizada durante el mecanizado aumenta la estabilidad
- Preparado para un mecanizado de alta velocidad, alto avance y alta profundidad de corte

#### Borde de corte especial

- Borde de corte totalmente paralelo mejorando la maquinabilidad
- Mecanizado de alta calidad y alta resistencia al desgaste

#### La llave exclusiva

- La llave exclusiva para Saw Man-X
- Sistema de sujeción más estable y conveniente

### Características del rompevirutas

- El diseño del rompevirutas y su saliente en el área posterior permiten una mejor evacuación de la viruta.
- Rompevirutas con el filo de corte negativo para mecanizado universal

#### Canal refrigerante y canal guía para evacuación de virutas

- Portaherramientas con refrigeración interna disponible
- Canal guía para la evacuación de virutas

#### Filo negativo

- Rendimiento estable en varios material.
- Garantizar la estabilidad del mecanizado a alta profundidad de corte.

#### Rompevirutas secundario en la zona posterior

- Mejor control de viruta de componentes de gran diámetro
- Evita que la viruta golpee y dañe el porta

#### Aumento de la altura del filo de corte lateral

- Mejor control de viruta en diámetros pequeños
- Aumenta la rigidez

 Insertos Aplicable C63

Seis clases insertos pueden utilizarse en un solo portaherramienta para diversas operaciones

# Fine Tools

- Sistema de anclaje fuerte e inserto especialmente diseñado, adecuados para el mecanizado de diámetro pequeño
- Seis tipos de insertos disponibles para cada soporte para varias operaciones
- Larga vida de la herramienta garantizada debido al buen sustrato de tenacidad con el nuevo recubrimiento TiAlN
- Inserto corregido garantiza un mecanizado de alta precisión

➤ **Rango de Aplicaciones** • Ranurado interno, Roscado y boreado de Ø8 mm~Ø16 mm

➤ **Características**

➤ **Sistema de códigos**

NFTIH 08 3 12 - S

Diametro Minimo
Longitud (ℓ/ØD)
Diametro del Zanco
Tipo de Zanco

S: Acero, C: Carburo

➤ **Condiciones de Corte Recomendadas**

- Nota**
- En caso de vibraciones reduzca la velocidad de avance
  - Para encontrar las condiciones de corte optimas, incremente las condiciones recomendadas gradualmente
  - En caso de tronzado desigual mayor de 0.04 pulgadas, trabaje con las condiciones de avance recomendadas

➤ **Sistema de Sujeción**

| Tornillo | Insertos             | Portainsero  |
|----------|----------------------|--|
|          | Tipo R    Tipo L<br> | Zanco (Acero ó Carburo cementado)<br><br>Longitud (3D, 4D, 5D) |

• El inserto disponible de tipo R/L con un portainsero

Sistema de sujeción estable de 3 puntos de anclaje

No existe riesgo de giro, debido al sistema de centrado

**3 Rompevirutas**  
E R M 16 - 1.5 ISO

M: Con Rompeviruta

**Forma del Inserto**

 < ER/IR >  
 < ERM/IRM >

**Características**

Un hilo de rosca que cuando está visto axialmente, vientos en una dirección a la izquierda y del retroceso. Todos los hilos de rosca izquierdos se señalan LH

Un hilo de rosca que cuando está visto axialmente, vientos en una dirección a la derecha y del retroceso. Los hilos de rosca son siempre derechos a menos que se especifiquen

Para un hilo de rosca recto, donde la incidencia del hilo de rosca y el diámetro de echada circundan la forma de la circunferencia un triángulo en ángulo recto, el ángulo de hélice es el contrario del ángulo de incidencia

**Maquindo Multiple de Roscado**

- Un hilo de rosca en el cual la incidencia es un múltiplo integral, mas grande que el extremo. Multi-empiece los permisos del hilo de rosca un avance más rápido sin una forma (más grande) más gruesa del hilo de rosca

**Estilo del Inserto**

El inserto corta en forma V sin rematar el diámetro externo del hilo de rosca. El mismo inserto se puede utilizar para una gama de diversos rangos del hilo de rosca que tengan un ángulo común del hilo de rosca.

El inserto de perfil completo formará un perfil completo del hilo de rosca incluyendo la cresta. Para cada rango del hilo en rosca estándar se requiere un inserto separado

El perfil completo para las roscas finas formará un hilo de rosca completo. El desmoche del diámetro externo es generado por el segundo diente

El inserto de semi perfil formará un hilo de rosca completo incluyendo radio de la cresta pero sin rematar el diámetro externo. Utilizado principalmente para los perfiles trapezoidales

## ➤ Método de Roscado en Torneado

| Roscado           | Insertos & Portainsero | Rotación                    | Dirección de corte | Método helice | Dibujo |
|-------------------|------------------------|-----------------------------|--------------------|---------------|--------|
| Derecho Externo   | EX RH                  | En sentido Manedillas Reloj | Hacia el Mandril   | Regular       | 1      |
|                   | EX LH                  | En sentido contrario        | Desde el Mandril   | Inverso       | 2      |
| Derecho Interno   | IN RH                  | En sentido Manedillas Reloj | Hacia el Mandril   | Regular       | 3      |
|                   | IN LH                  | En sentido contrario        | Desde el Mandril   | Inverso       | 4      |
| Izquierdo Externo | EX LH                  | En sentido contrario        | Hacia el Mandril   | Regular       | 5      |
|                   | EX RH                  | En sentido Manedillas Reloj | Desde el Mandril   | Inverso       | 6      |
| Izquierdo Interno | IN LH                  | En sentido contrario        | Hacia el Mandril   | Regular       | 7      |
|                   | IN RH                  | En sentido Manedillas Reloj | Desde el Mandril   | Inverso       | 8      |

## ➤ Calculo del angulo helice (β)

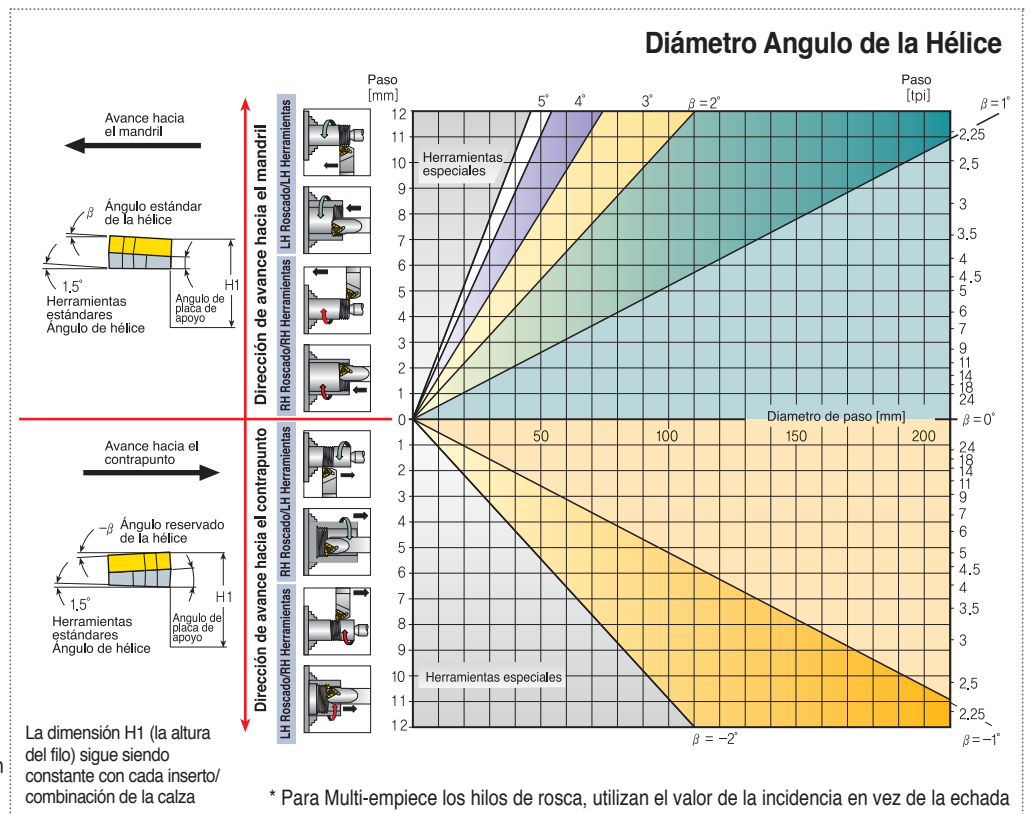

• El angulo de la helice es calculado por la sig. formula:

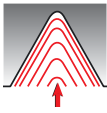

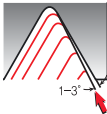

$$\beta = \tan^{-1} \frac{P \times N}{\pi \times D}$$

β: angulo de la helice (°)  
 P: Paso (mm)  
 N: No. De comienzos  
 D: diametro del paso (mm)  
 Avance = P x N

• El angulo de la helice se puede tambien obtener del siguiente diagrama

**Método de Entrada del hilo en la rosca**

| Tipo de entrada   | Aplicación   |
|---|--|
|  <p><b>Entrada Radial</b></p>                  | <ul style="list-style-type: none"> <li>• Cuando la echada es más pequeña de 16TPI</li> <li>• Para el material con rebabas cortas</li> <li>• Para el trabajo con material endurecido</li> </ul> <p>La entrada radial es el método más simple y más rápido. La alimentación es perpendicular al eje de torneado y ambos flancos del parte móvil realizan la operación del corte. La entrada radial se recomienda en 3 casos</p>  |
|  <p><b>Entrada del Flanco (modificada)</b></p> | <ul style="list-style-type: none"> <li>• Cuando la echada del hilo de rosca es mayor de 16 TPI. Usando el método radial, la longitud de filo eficaz es demasiado grande, dando por resultado vibraciones para TRAPEZ y ACME. El resultado radial en tres filos, flujo del método de la viruta y maquinado muy difícil.</li> </ul> <p>La entrada del flanco se recomienda en los casos siguientes</p>                           |
|  <p><b>Entrada Alternativa del Flanco</b></p>  | <ul style="list-style-type: none"> <li>• Este método divide la carga igualmente en ambos flancos, dando por resultado desgaste igual a lo largo de los filos. La entrada alterna del flanco requiere una programación más complicada y no esta disponible en todos los tornos</li> </ul> <p>El uso del método alterno del flanco se recomienda especialmente en echadas grandes y para los materiales con los chils largos</p> |

**Placa Apoyo**

## Cálculo de N [RPM]

$$n = \frac{vc \times 1000}{\pi \times D} \quad vc = \frac{\pi \times D \times n}{1000}$$

n: RPM (min<sup>-1</sup>)  
vc: Velocidad de Corte (m/min)  
D: Diametro Pza.Trabajo (mm)

## Número de Maquinado

| Paso         | mm  | 0.50 | 0.75 | 1.00 | 1.25 | 1.50 | 1.75 | 2.00 | 2.50 | 3.00 | 3.50  | 4.00  | 4.50  | 5.00  | 5.50  | 6.00  | 8.00  |
|--------------|-----|------|------|------|------|------|------|------|------|------|-------|-------|-------|-------|-------|-------|-------|
|              | tpi | 48   | 32   | 24   | 20   | 16   | 14   | 12   | 10   | 8    | 7     | 6     | 5.5   | 5     | 4.5   | 4     | 3     |
| No. De pases |     | 4~6  | 4~7  | 4~8  | 5~9  | 6~10 | 7~12 | 7~12 | 8~14 | 9~16 | 10~18 | 11~18 | 11~19 | 12~20 | 12~20 | 12~20 | 15~24 |

※ Una profundidad de corte en calculado por la profundidad de corte total dividido en tiempos de mecanizado  
ex) ER16 - 1.5ISO, hmin 0,92: si el mecanizado de 10 veces, una profundidad de corte es 0.092(0.92/10)

## 🔗 Pasos para Roscado en Torneado

### Aplicación

- Rosca: Externa Derecha ISO Métrico M40x2.5
- Material: 4140 (25 HRC)

### 1 Seleccione el método de roscado

La dirección de avance hacia el plato fue elegido. Por lo tanto un inserto externo de mano derecha y un holder exterior derecho sera utilizado

### 2 Selección del Inserto

Inserto Elegido: ER16-2.5 ISO

| Tam. Inserto | Paso | Codigo      | Placa base | Porta herramientas |
|--------------|------|-------------|------------|--------------------|
| d            | mm   | RH          | RH         | ERH□□-16           |
| 9.525        | 2.5  | ER16-2.5ISO | ATE16      | ERH□□-16           |

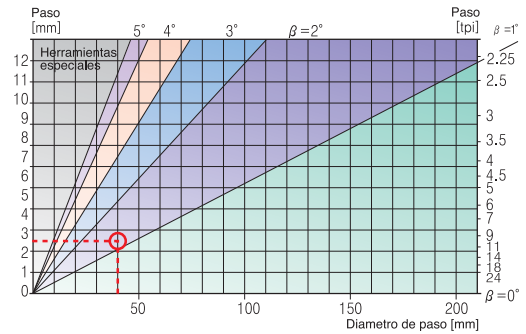

### 3 Seleccione el porta herramientas

Porta herramientas seleccionado: ERH 25-16

| Tam. Inserto | Codigo   | Dimensiones (mm) |    |    |       |    |
|--------------|----------|------------------|----|----|-------|----|
| d            | RH       | H=h              | W  | S  | L     | ℓ  |
| 9.525        | ERH25-16 | 25               | 25 | 25 | 153.6 | 30 |

### 4 Determine el ángulo helicoidal de la rosca

Para la tabla, usando un Paso de 2.5 mm (10 tpi) y el diametro de la pieza de trabajo es de 40mm (1.57") nos encontramos con el ángulo de hélice de 1.5°

### 5 Seleccione la placa adecuada

| Angulo de Helice Resultante |   | 1.5°  |
|-----------------------------|---|-------|
| Tam. Inserto                | d | 9.525 |
|                             | L | 16    |
| Codigo                      |   | ATE16 |

### 6 Seleccione el grado de carburo y las condiciones de corte

| Pieza de Trabajo |   | HB            | vc (m/min) |
|------------------|---|---------------|------------|
|                  |   |               | PC3030T    |
| <b>P</b>         | <b>Aleacion Baja en Acero</b><br>(aleacion de Elementos ≤ 5%) | No endurecido | 180 85~145 |
|                  |   | Endurecido    | 275 75~140 |
|                  |   | Endurecido    | 350 70~135 |

- Grado de carburo elegido: PC3030T
- Velocidad Corte: 140m/min

### 7 Determine el No. de pasadas

| Paso          | mm  | 1.50 | 1.75 | 2.00 | 2.50 | 3.00 | 3.50  | 4.00  |
|---------------|-----|------|------|------|------|------|-------|-------|
|               | tpi | 16   | 14   | 12   | 10   | 8    | 7     | 6     |
| No de Pasadas |     | 6~10 | 7~12 | 7~12 | 8~14 | 9~16 | 10~18 | 11~18 |

- Grado de carburo elegido: PC3030T
- Velocidad Corte: 140 m/min

### 8 El resumen

| Tipo de Roscado               | ISO M40 x 2.5 Externo de mano derecha |
|-------------------------------|---------------------------------------|
| 1. Dirección de Avance        | Hacia el husillo                      |
| 2. Inserto y grado            | ER16-2.5ISO, PC3030T                  |
| 3. Soportes para herramientas | ERH25-16                              |
| 4. Angulo de Helice           | 1.5°                                  |
| 5. Placa de apoyo             | ATE16                                 |
| 6. Velocidad de Corte         | 140 m/min                             |
| 7. Numero de pasadas          | 10                                    |

# D Información Técnica de Roscado

## Las condiciones de corte dependen de

|                             |                            |  |                        |  |  |  |

|                             | Sujeción del sistema       |  |                        |  |  |  |

## Problemas, Posible Causa y solución

| Problema                             | Possible Cause  | Solución  |
|--------------------------------------|---|---|
| <b>Desgaste excesivo</b>             | Velocidad de corte Alta .....<br>Profundidad de corte baja (muchas pasadas) .....<br>Selección de grado inadecuado .....<br>Refrigerante insuficiente .....                 | ➔ Reducir Velocidad/usar inserto recubierto<br>➔ Incrementar profundidad de corte<br>➔ Usar inserto Recubierto<br>➔ Incrementar Refrigerante  |
| <b>Desgaste Irregular en el filo</b> | Selección de Angulo Incorrecto .....<br>Metodo de Roscado erroneo .....   | ➔ Seleccionar placa correcta<br>➔ Seleccionar metodo alterno  |
| <b>Deformación Plástica Excesiva</b> | Profundidad de corte excesiva .....<br>Refrigerante insuficiente .....<br>Velocidad de corte Alta .....<br>Selección de grado inadecuado .....<br>Radio Pequeno .....       | ➔ Reducir prof. de corte/incrementar No.de pasadas<br>➔ Incrementar Refrigerante<br>➔ Incrementar Refrigerante<br>➔ Usar Grado mas duro<br>➔ Usar inserto con radio mas grande                            |
| <b>Fractura en el filo de corte</b>  | Profundidad de corte excesiva .....<br>Deformación plastica excesiva .....<br>Refrigerante insuficiente .....<br>Selección de grado inadecuado .....<br>Inestabilidad ..... | ➔ Reducir Velocidad/incrementar No.de pasadas<br>➔ Usar inserto con mayor dureza<br>➔ Incrementar Refrigerante/Corregir flujo de Refrig<br>➔ Hacer seleccion adecuada<br>➔ Revisar estabilidad del sistem |
| <b>Adhesión de material al filo</b>  | Velocidad de corte Incorrecta .....<br>Selección de grado inadecuado .....  | ➔ Cambie la velocidad de corte<br>➔ Use Insertos recubiertos  |
| <b>Bajo perfil de la cuerda</b>      | La herramienta no está a la altura del eje en la pieza de trabajo .....<br>El inserto no alcanza la cresta de la cuerda .....<br>Inserto mal seleccionado .....             | ➔ Cambie la altura de la herramienta<br>➔ Dimensione el diámetro de la pieza<br>➔ Cambie el filo de corte   |
| <b>Mal Acabado</b>                   | Velocidad de corte baja .....<br>Placa equivocada .....<br>Método del flanco de entrada no es apropiado .....   | ➔ Incremente la velocidad de corte<br>➔ Seleccione la placa correcta<br>➔ Utilice un método alternativo de alimentación flanco o radial   |

## Insertos de Roscado con Rompeviruta

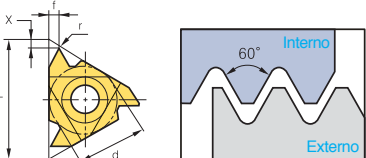

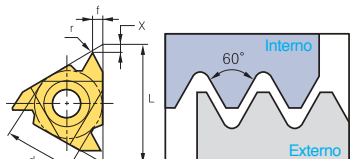

- Características**
- Inseto Económico
  - Buena tenacidad y alta precisión en este tipo de insertos
  - Diseño Exclusivo del inserto que mejora el control de la viruta
  - Nuevo grado para aplicación general de diversas piezas de trabajo

| Tipo               | Inseto básico   |         | Inseto con las clases de Rompevirutas   |         |  |         |

# Roscado por Fresado

## Herramienta para Trabajo derecho

### Tipo diametro pequeño

**Portainserto:** TMSR **Inserto:** TM L = 10.4mm  
Para diámetros de taladro pequeños abajo de 9.5mm

### Tipo estandar

**Portainserto:** TMSR **Inserto:** TM2  
Para Longitud de Roscado Estandar

### Tipo largo

**Portainserto:** TMSR **Inserto:** TM2  
Para Roscado Largo ó Profundo

### Tipo Cónico

**Portainserto:** TMSR **Inserto:** TM2 (BSPT, NPT, NPTF)  
Para Longitud de Roscado Estandar

- El porta herramientas recomendado es el más grande para las especificaciones de rosca dadas
- También se puede utilizar un porta herramientas con diámetros de corte más pequeños o iguales (D2)

D

Roscado

## ➤ Recomendación para Especificación dada Roscado Interno

- El porta herramientas recomendado es el más grande para las especificaciones de rosca dadas
- También se puede utilizar un porta herramientas con diámetros de corte más pequeños o iguales (D2)

- Para realizar una operación de fresado de roscas, se requiere una fresadora con capacidad de control de tres ejes de interpolación helicoidal
- La interpolación helicoidal es una función CNC que produce un movimiento de herramienta a lo largo de una trayectoria helicoidal. Este movimiento helicoidal combina movimiento circular en un plano con un movimiento lineal simultáneo en un plano perpendicular al primero. Por ejemplo, la ruta desde el punto A al punto B (Fig. A) en la envoltura del cilindro combina un movimiento circular en el plano x-y con un desplazamiento lineal en la dirección z
- En la mayoría de los sistemas CNC, esta función se puede ejecutar de dos maneras diferentes:

G02: Interpolación helicoidal en el sentido de las agujas del reloj

G03: Interpolación helicoidal en el sentido opuesto a las agujas del reloj

La operación de roscado milimétrica (Fig. B) consiste en la rotación circular de la herramienta alrededor de su propio eje con un movimiento que se mueve en órbita alrededor a lo largo de la circunferencia del objeto. Durante tal órbita, la herramienta cambiará de posición verticalmente a una longitud horizontal. Estos movimientos combinados con la geometría del Inserto crean la forma requerida del hilo de la rosca. Hay tres maneras aceptables de acercarse al objeto con la herramienta para iniciar la producción del hilo de rosca:

1. Acercamiento tangencial del arco
2. Acercamiento radial
3. Línea tangencial

## ➤ Acercamiento Tangencial del Arco

- Con este método, la herramienta entra y sale del objeto suavemente. No se deja ningunas marcas en el objeto y no hay vibración, incluso con materiales más duros. Aunque requiera una programación levemente más compleja que el acercamiento radial (véase abajo), éste es el método recomendado para hacer maquinados de rosca de alta calidad

### Roscado Interno

### Roscado Externo

1-2 : acercamiento rápido

2-3 : entrada de la herramienta a lo largo del arco tangencial, con la alimentación simultánea a lo largo del eje-z

3-4 : movimiento helicoidal durante una órbita completa (360°)

4-5 : salida de la herramienta a lo largo del arco tangencial, con la alimentación de continuación a lo largo del eje-z

5-6 : Retorno rápido

## ➤ Acercamiento Radial

- Éste es el método más simple. Hay dos características dignos sobre el acercamiento radial:
  - A. una pequeña marca vertical puede ser elevación en el punto de la entrada (y salida). Esto no afecta en nada al hilo de la rosca
  - B. al usar este método con los materiales muy duros, puede haber una tendencia de la herramienta a vibrar mientras que se acerca a la profundidad de corte completa
- Nota: La alimentación radial durante la entrada a profundidad completa del perfil debe solamente ser de 1/3 de la alimintación circular

### Roscado Interno

### Roscado Externo

1-2 : entrada radial

2-3 : movimiento helicoidal durante una órbita completa (360°)

3-4 : salida radial

## ➤ Línea Tangencial de Acercamiento

- Este método es muy simple, y tiene todas las ventajas del método tangencial del arco. Sin embargo, es aplicable solamente con los hilos de rosca externos

### Externo Rosca

1-2 : entrada radial con la alimentación simultánea a lo largo del eje-z

2-3 : movimiento helicoidal durante una órbita completa (360°)

3-4 : salida radial

## Preparación para la operación de Roscado Milimétrico

### ➤ Cálculo de la velocidad rotatoria y de la alimentación en el filo

$$n = \frac{vc \times 1000}{\pi \times D_2}$$

$$vc = \frac{n \times \pi \times D_2}{1000}$$

$$F_1 = n \times z \times f_n$$

**n:** Velocidad rotatoria (min<sup>-1</sup>)

**vc:** Velocidad del corte (m/min)

**D<sub>2</sub>:** Diámetro del corte del Portainsero (mm)

**F<sub>1</sub>:** Nivel de entrada verdadero en los filos (mm/min)

**z:** No. de los filos

**f<sub>n</sub>:** Alimentación por la rotación (mm/rev)

### ➤ Cálculo de los niveles de entrada en la línea del centro de la herramienta

- En la mayoría de las máquinas del CNC, el nivel de entrada requerido para programar es el de la línea central de la herramienta. Al ocuparse del movimiento lineal de la herramienta, el nivel de entrada en el filo y la línea de centro, son idénticos, pero con movimiento circular de la herramienta tal no es el caso. Las ecuaciones definen la relación entre los niveles de entrada en el filo y en la línea del centro de la herramienta

### ➤ Grados & Aplicaciones

- Grado: PC9570T
- Aplicación: Primera elección para Acero y Fundición Un resistente sustrato submicrónico con recubrimiento de TiCN. Proporciona una tenacidad de fractura y resistencia al desgaste excelente

### ➤ Solución de Problemas

| Problema   | Causa Posible   | Solución  |
|--|---|---|
| <b>Desgaste creciente en el flanco del Inserto</b> | Velocidad del corte demasiado alta .....><br>La viruta es demasiado fina .....><br>Líquido refrigerador escaso .....>                             | Reduzca la velocidad del corte/Use Insertos Recubiertos<br>Aumente el nivel de entrada<br>Aumente el flujo del líquido refrigerador   |
| <b>Fractura en el Filo de Corte</b>                | La viruta es demasiado gruesa .....><br>Vibración .....>  | Reduzca el nivel de entrada/Use el método tangencial del arco/<br>Incremente RPM<br>Compruebe la estabilidad  |
| <b>Adherencia del material en el filo de corte</b> | Velocidad incorrecta del corte .....><br>Grado inadecuado del carburo .....>  | Cambie la Velocidad de Corte<br>Use un inserto recubierto   |
| <b>Rechinido/Vibración</b>                         | El nivel de entrada es demasiado alto .....><br>El perfil es demasiado profundo .....><br>La longitud del hilo de rosca es demasiado larga .....> | Reduzca la alimentación<br>Ejecute dos pasos, cada uno con profundidad de corte creciente<br>Ejecute 2 pasos, cada de la longitud del hilo de rosca del corte solamente mitad |
| <b>Inexactitud en la rosca</b>                     | Desviación de la herramienta .....>   | Reduzca el nivel de entrada/Ejecute un corte "cero"   |

## Condiciones de Corte Recomendadas

## Exemplo

- En la entrada de la herramienta, fije la alimentación f (mm/Dientes) hasta el 70% más baja que la alimentación que rosca
- Avance Roscado: 0.3 mm/t
- Tolerancia del Avance: 0.09 mm/t

# D Insertos de Roscado por Fresado

## ISO Métrico

### Externo/Interno

Definido para : R262 (DIN 13)  
Tolerancia Clase : 6g/6H
