Machos de metal duro y HSS de alto rendimiento

# MACHOS

- Machos de metal duro y HSS de gran rendimiento
- Una amplia gama de machos, machos con entrada corregida (GUN), machos helicoidales, machos rectos, machos de laminación, para cubrir un completo rango de aplicaciones, disponibles en norma DIN y JIS
- Se pueden fabricar bajo pedido machos de HSS sinterizado o medidas menores a M3

## Características

- Machos metal duro y machos HSS
  - Machos metal duro: Sustrato muy tenaz
  - HSS: Sustrato con alto contenido en vanadio
- Aplicables a distintos requerimientos de la pieza
  - Una completa gama de machos de entrada corregida (GUN), helicoidales, rectos y de laminación
- Roscas métricas estándar
  - JIS, DIN estándar y especiales
- Amplia gama de machos por tipo y medida
  - Amplia selección con varios tipos y tamaños

## Sistema de codificación

**Norma de rosca medida y paso**

**Geometría**

**Profundidad máx.de rosca**

**Macho laminación**

**Longitud total**

- ST: Macho recto  
 PT: Entrada corregida (GUN)  
 SP: Macho helicoidal  
 RT: Macho laminación  
 SR: Macho laminación helicoidal  
 STD: Macho recto (DIN)  
 PTD: Macho entrada corregida (GUN) (DIN)  
 SPD: Macho helicoidal (DIN)  
 RTD: Macho laminación (DIN)

S: Simple  
 M: Multiple

Tipo especial

### Condiciones de corte recomendadas y lubricación

- Para el mecanizado de acero forjado en frío/caliente y aleaciones ferrosas sinterizadas a altos avances, alta profundidad de corte y condiciones altamente interrumpidas
- Excelente resistencia al astillado, fractura y grietas térmicas.
- Mejora el acabado de la superficie debido a los bordes de corte optimizados

\* Ideal para hacer agujeros ciegos en cantidad en fundición general, fundición dúctil, fundición de latón, plásticos termoestables, etc.

\* Resistance Resistencia al desgaste altamente mejorada por el uso del recubrimiento de TiCN para operaciones de roscado de alta eficiencia

\* Para uso general en aceros y metales no ferrosos.

\* Resistencia al desgaste altamente mejorada por el uso del recubrimiento de TICN para operaciones de roscado de alta eficiencia

\* Ideal para hacer agujeros pasantes y agujeros ciegos en metales no ferrosos

- \* Ideal para hacer agujeros pasantes y agujeros ciegos en acero al carbono, acero aleado y metales no ferrosos
- \* Resistance Resistencia al desgaste altamente mejorada por el uso de TiN, TiCN, recubrimiento de óxido de vapor para operaciones de roscado de alta eficiencia
- \* Edges Los bordes acumulados se evitan gracias a un reducido coeficiente de fricción obtenido al utilizar un fluido de corte poroso de Fe<sup>3</sup>O<sup>4</sup>
- \* Ideal para roscado de acero inoxidable, acero fundido, acero al carbono para estructuras de máquinas, etc.

\* Ideal para hacer agujeros ciegos. Sus flautas proporcionan una excelente evacuación de viruta en acero al carbono, acero aleado y materiales no ferrosos

\* Resistencia al desgaste altamente mejorada por el uso de TiN, TiCN, recubrimiento de óxido de vapor para operaciones de extracción de alta eficiencia

\* Los bordes acumulados se evitan gracias a un reducido coeficiente de fricción obtenido al utilizar un fluido de corte poroso de Fe<sup>3</sup>O<sup>4</sup>

\* Ideal para roscado de acero inoxidable, acero fundido, acero al carbono para estructuras de máquinas, etc.

\* Para uso general tanto para aceros como para metales no ferrosos

\* Resistencia al desgaste altamente mejorada por el uso de TiN, recubrimiento de TiCN para operaciones de extracción de alta eficiencia

\* Ideal para aprovechar aleaciones no ferrosas como aluminio, zinc, cobre, etc.

- \* Para uso general para la extracción de aluminio, magnesio y zinc, así como metales no ferrosos.
- \* Resistencia al desgaste altamente mejorada por el uso de TiN, revestimiento de TiCN para operaciones de roscado de alta eficiencia
- \* Ideal para la extracción de acero, materiales no ferrosos y acero inoxidable.

## Aplicación según material

## Insertos altamente rígidos para desbaste

# Mill-max Heavy new

- **Productividad:** reducción del tiempo de corte gracias al filo de corte diseñado específicamente para operaciones de desbaste pesado
- **Alta rigidez:** los insertos y el asiento de los insertos altamente rígidos ambos impiden que la herramienta se rompa durante desbastes pesados
- **Estabilidad de amarre:** El sistema de amarre en cuña, fácil de usar y potente, reduce el tiempo de cambio de insertos y mejora amarre

### Característica del inserto

- **Inserciones muy rígidas**
  - Ideal para desbaste a gran profundidad de corte
- **Amplia área de bolsillo**
  - Mejora la evacuación de viruta
  - Reducción de las cargas de corte
- **Filo de corte secundario**
  - Acabado superficial mejorado gracias a filo con función wiper

**MAX. ap**  
SCKN22: 10.5 mm  
SCKN28: 14.5 mm

- **Filo de corte principal**
  - Ángulo de ataque muy positivo
- **Alivio de flanco de 2 niveles superficie**
  - Disponibilidad de ángulo de incidencia, incluso a altos avances

### Características de los rompevirutas

| Insertos | Filo de corte | Usos          | Características   |
|----------|---------------|---------------|---|
| MM       |               | Para desbaste | Rompe virutas muy rígido, diseñado para desbaste a altas profundidades de corte |

### Características del plato

- **Costuras de corte**
  - Prevenir la rotura del cortador incluso en duras condiciones de corte
- **Bolsillos de chip ancho**
  - Mejorar la evacuación de viruta

- **Sistema de sujeción tipo cuña**
  - Proporciona estabilidad de sujeción
  - Reduce el tiempo de sustitución de inserciones

Insertos disponibles E13, E16 Detalles del cortador E400~E402

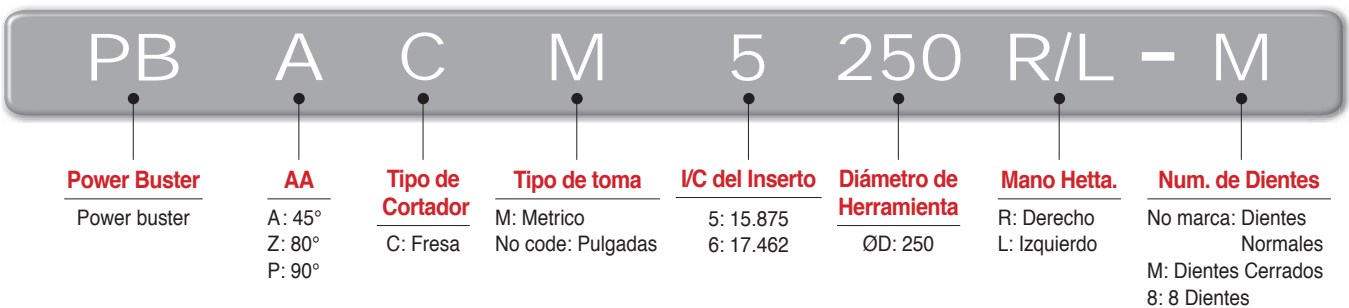

**Nuevo diseño de borde dentado incrementa la productividad por la reducción de carga del corte del inserto**

# Power Buster

- Nueva herramienta con un filo dentado especialmente diseñado para reducir la de carga de corte, y ayudar a incrementar la productividad
- Inserto de doble cara con 6 filos de corte, con una geometría específicamente diseñada para asegurar una alta rigidez, larga vida útil y de bajo costo
- El borde dentado fragmenta las virutas en segmentos más pequeños, mejorando en gran medida el control de viruta, reduciendo la interferencia del cortador y asegurando una buena durabilidad del cuerpo de la fresa.
- Dos tipos insertos disponibles:  
TNMX27: para cortadores con ángulos de entrada a 45° (cortador PBA) y 80° (cortador PBZ),  
TNMX30: para cortadores con ángulos de entrada a 90° (cortador PBP)
- Aplicación : Alta profundidad de corte y alto avance (acero y hierro fundido)

## ➤ Sistema de codificación

## ➤ Característica del inserto

### 1 Filo de corte mayor (filo dentado)

- Baja fuerza de corte
- Ideal para el control de la viruta, las virutas se dividen en pequeñas piezas para la apropiada evacuación de la viruta. Insertos de doble cara con 6 filos.
- Diseño de filo ideal para fresado pesado de Acero y Fundiciones

### • Comparación de control de viruta y fuerza de corte

- **Pieza de trabajo** SCM440
- **Condicion de Corte**  $vc = 200 \text{ m/min}$ ,  $ap = 8 \text{ mm}$ ,  $ae = 90 \text{ mm}$ ,  $fz = 0.3 \text{ mm/diente}$

### 2 Superior y lado Inferior

- El grosor del inserto garantiza una alta rigidez
- Diseño del inserto equilibrado para un montaje estable

### 3 Rompeviruta NM

- Ángulo de ataque pronunciado para baja fuerza de corte
- Flujo de viruta bueno en diferentes velocidades y profundidades de corte
- Inserto protegido con asientos de montaje preciso
- Baja alta y buena evacuación del calor en cortes de alta profundidad

## 4 Forma y tipología del inserto Power buster (para ángulos de entrada a 45° y 80°)

- Ángulo de ataque alto para evitar interferencia con la viruta
- Ángulo de filo menor calculado para ambos cortadores AA 45° & 80°

## 5 Sistema de espejo

- El filo de corte en ambos lados del inserto cubre todo el área de corte al superponerse

## Características de la fresa

### 1 Sistema de sujeción de tornillo

- Sistema de sujeción simple y fuerte

### 2 Mejor rigidez mejor y sistema de Ensamblado Estable.

- La placa de apoyo protege al cortador de daños al inserto
- Base de alta precisión garantiza la más estricta sujeción.

### 3 Sistema a toda prueba

- El diseño de las muescas debe coincidir con el asiento para impedir instalación incorrecta y desalineada de los insertos

**4 Sistema de aplicación múltiple**

- El mismo inserto para el uso múltiple (45° y 80°)

■ **PBA/PBZ**

Las muelas son efectivas con una profundidad de corte mayor a 1 mm

Las muelas son efectivas con una profundidad de corte mayor a 3 mm

■ **PBP**

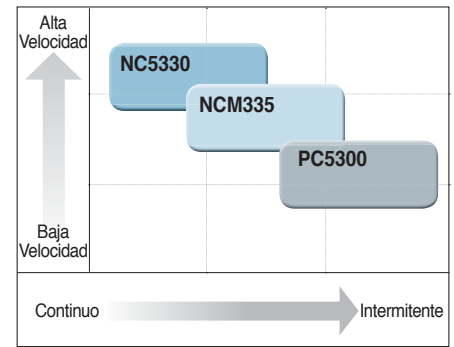

Para cortadores a 90°, los insertos con el filo dentado fragmentan la viruta en pequeños segmentos a partir de cortes de 5mm de profundidad

Detalles del cortador E400~E402

Series de Rich mill es una de las innovaciones que provee más filos de cortes disponibles con inserto doble y una vida más larga para la herramienta para nuestros usuarios

## Serie Rich Mill

- La serie Rich mill es un tipo de innovación que proporciona un mayor número de filos de corte por inserto, gracias a los insertos con doble filo, alargando la vida útil de la herramienta. Gracias al diseño de su geometría y el filo de corte especial, se garantiza una muy baja carga de corte, por consiguiente, una mayor duración de la herramienta.
- La serie Rich-Mill tiene una amplia gama de aplicaciones: acero, acero inoxidable, fundición y aluminio.
- Aplicando insertos negativos mas fuertes alargando vida útil de la herramienta
- Rich mill cuenta con 2 sistemas de sujeción: de tornillo y de brida

## Rich Mill RM3

### Características

- Alta calidad: verdadera operación de hombro a 90°
- Alta productividad: la inserción gruesa y fuerte y la sujeción de 3 caras aseguran un funcionamiento estable incluso en condiciones difíciles
- Alta economía: larga vida útil de la herramienta debido a un proceso de fabricación optimizado

### Característica del inserto

## Rich Mill RM3

### Características de la fresa

#### A través del sistema de refrigeración

- Mayor vida útil de la herramienta debido a la inyección directa en el filo de corte

### Sistema lubricación interno

- Exclusivo a través de perno de refrigerante requerido
- Distribución efectiva del refrigerante directamente al filo de corte
- Adaptador especial para refrigerante requerido

### Características de los rompe virutas

| Insertos | Filo de corte | Usos     | Características   |
|----------|---------------|----------|---|
| MA       |               | Aluminio | Calidad de corte superior para aluminio debido al filo afilado y superficie pulida  |
| ML       |               | Ligero   | Calidad de corte superior para corte ligero y ligero, maquinado de materiales difíciles de cortar a través de la baja carga de corte del rompevirutas |
| MM       |               | General  | Adecuado para varios cortes debido al diseño de forma especial para corte general   |

## Rich Mill RM4

### Características

- 4 bordes de corte económicos utilizando inserto de doble cara
- RM4, como herramienta de fresado multifuncional, ofrece 4 filos de corte económicos por utilizando un inserto innovador de doble cara
- El rompevirutas de diseño especial consiste en un alto ángulo de inclinación y un fuerte filo para disminuir la carga de corte
- RM4 es una herramienta multifuncional que puede cubrir caras, cortes laterales, Ranurado, ramping y corte helicoidal.
- La combinación óptima de la geometría especial de vanguardia con una variedad de nuevos grados proporciona Consistencia y larga vida útil de la plaquita.

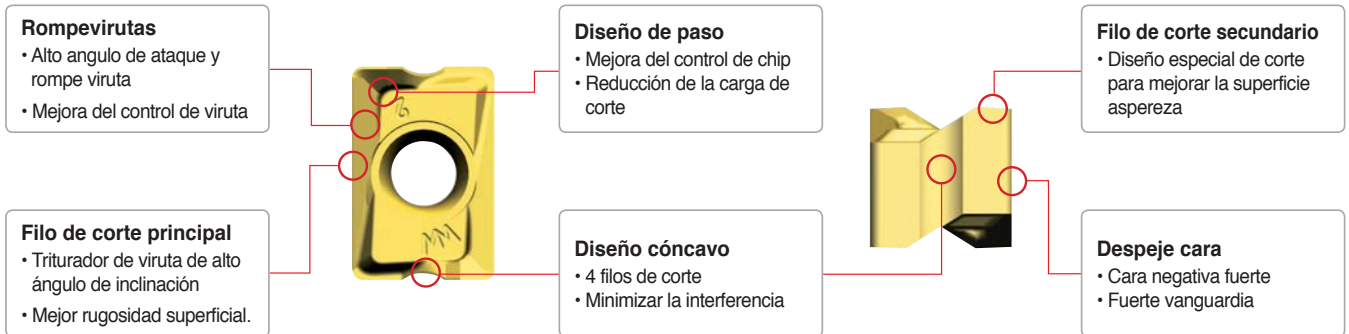

### Características de la fresa

- Se pueden usar 4 filos de corte usando un inserto de doble cara
- El rompevirutas y el borde de corte de alto ángulo de inclinación pueden hacer un corte suave con una carga de corte baja
- Inserción negativa fuerte
- Herramienta de alta eficiencia, económica y multifuncional.

### Característica del inserto

- Inserción de doble cara con 4 filos de corte.
- Triturador de viruta de alto ángulo de inclinación, vanguardia
- Flexibilidad del producto.
- Herramienta de alta eficiencia, económica y multifuncional.
- El inserto negativo tiene un filo fuerte

### Usos

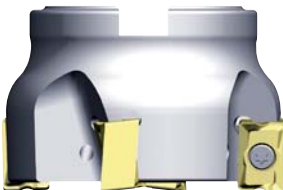

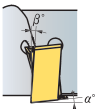

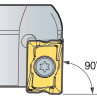

## Rich Mill RM4

### Características de los rompevirutas

| Insertos   | Filo de corte   | Usos                       | Características  |
|--|---|----------------------------|--|
| <b>MA</b><br> |  | Aluminio, maquinado ligero | Con la aplicación de borde afilado, se ha logrado la mejor productividad, Especial para aluminio o corte de baja fuerza. |
| <b>MF</b><br> |  | Corte ligero               | Debido a la baja carga de corte, es bueno para corte ligero y material difícil de cortar                                 |
| <b>MM</b><br> |  | Corte general              | Diseño para fresado general  |

### Configuración del ensamblaje

| Forma   | Configuración del inserto en el cortador  | Características   |
|---|---|---|
|  |  | Rompe virutas con alto ángulo de ataque y ángulo de ajuste positivo para una carga de corte baja<br>→ Mejora de la maquinabilidad |
|   |  | Múltiples aplicaciones para el revestimiento, al hombro, Ranurado, ramping, corte helicoidal, etc                                 |

### Sistema lubricación interno

- Utilizando un perno de refrigerante exclusivo (perno de casquillo hexagonal) Se puede adquirir un potente enfriamiento y una mejor evacuación de viruta
- Para obtener un control óptimo de viruta, la dirección de inyección de refrigerante Ha sido diseñado para llegar a cada vanguardia directamente (a través del eje de refrigerante es obligatorio)

A través del sistema de refrigeración para disminuir el calor de corte y buena evacuación de viruta

## Rich Mill RM4

### Rampeado lineal y circular

1. Rampeado lineal

2. Rampeado circular para agujero ciego

3. Rampeado circular para agujero pasante

(mm)

## Rich Mill RM4Z

### Características

- La serie de molinos ricos RM4Z es un molino de inmersión para mecanizado vertical de alta eficiencia, como ranurado y embolsado en aplicaciones de desbaste
- La serie de molinos ricos RM4Z es una herramienta de fresado altamente eficiente para hundir, remojar y enfrentar. Hace las operaciones más económicas con el uso de su inserto de doble esquina de 4 esquinas
- El mecanizado por inmersión reduce el tiempo de entrega para una alta productividad y un mecanizado de precisión
- Al hundir, la profundidad máxima del tipo RM4Z 3000 es de 9,0 mm y la del tipo RM4Z 4000 de 14,0 mm

**A través del sistema de refrigeración**

- Mejora del control de chip.
- La refrigeración aumenta la vida útil de la herramienta.

**Espaciado ancho**

Facilita evacuación de viruta

**Amarre con tornillo**

- Inserto de doble cara 4 esquinas disponibles
- Rompe viruta de alto ángulo de ataque e incidencia
- Varios tipos de mecanizado disponibles.
- Inserto de alta eficiencia y económico.
- Inserto de tipo negativo - Fuerte filo

### Característica del inserto

**Filo de corte principal**

- Triturador de viruta de alto ángulo de inclinación
- Mejor rugosidad superficial.

**Diseño de paso**

- Mejora del control de chip
- Reducción de la carga de corte

**Filo de corte secundario**

- Diseño especial de corte para mejorar la superficie aspereza

**Rompevirutas**

- Alto ángulo de ataque y rompe viruta
- Mejora del control de viruta

**Diseño cóncavo**

- 4 filos de corte
- Minimizar la interferencia

**Despeje cara**

- Cara negativa fuerte
- Fuerte vanguardia

### Usos

## Rich Mill RM4Z

### Profundidad de corte según tipo de maquinado

• En maquinado horizontal, profundidad de corte =  $ap$  (mm)

• En maquinado vertical, plunging, profundidad de corte =  $ae$  (mm)

| RM4Z      | Horizontal    | Vertical      |        |
|-----------|---------------|---------------|--------|
|           | max $ap$ (mm) | max $ae$ (mm) | Paso   |
| RM4Z 3000 | 1.5           | 9             | < 0.7D |
| RM4Z 4000 | 2.5           | 14            | < 0.7D |

### Paso máximo en plunging

| ae | Diámetro de fresa (mm) |      |      |      |      |      |      |      |      |
|----|------------------------|------|------|------|------|------|------|------|------|
|    | 25                     | 32   | 40   | 50   | 52   | 63   | 66   | 80   | 100  |
|    | Paso máximo (mm)       |      |      |      |      |      |      |      |      |
| 1  | 9.7                    | 11.1 | 12.4 | 14   | 14.2 | 15.7 | 16.1 | 17.7 | 19.9 |

### Sistema de refrigeración interno

- El tornillo hexagonal refrigerante proporciona excelente refrigeración y evacuación de viruta.
  - Mejora la inyección directa de refrigerante al filo de corte proporcionando un enfriamiento efectivo
  - Debe emplearse un adaptador especial para refrigeración
- \*Tornillo refrigerante no incluido; disponible para venta

## Rich Mill RM4Z

### Consejo de programación

- - - - - Dirección de avance en plunging
- Escape/salida de herramienta
- $\beta$  Ángulo de escape/salida ( $\beta \geq 1^\circ$ )

- Cuando vaya a retroceder después del plunging, programe la salida con un ángulo de escape de más de  $1^\circ$

### Maquinado helicoidal

$$\text{ØDc} = \text{ØDh} - \text{ØD}$$

- ØDc = Paso punto central herramienta
- ØDh = Diámetro de agujero a maquinarse
- ØD = Diámetro herramienta

(mm)

| Codigo | Diámetro ØD | Datos corte helicoidal |             |                            |             |     |

## Rich Mill RM6

### Características

- Sujeción estable: 3 superficies de sujeción laterales y tornillos de sujeción fuertes.  
→ Mejora la estabilidad de corte.
- Resultados de alta calidad: alta precisión, excelente perpendicularidad, excelente acabado superficial en el flanco, tolerancia precisa
- Alta productividad: alto ángulo de inclinación y bordes afilados para una menor resistencia de corte  
→ Ideal para mecanizado de alta velocidad y alto avance.

### Característica del inserto

#### Mayor estabilidad de sujeción

- Amplias zonas de sujeción y fuerte Tornillos de sujeción para sujeción rígida

#### Ángulo de ataque muy positivo y rompe virutas

- Mantiene una sujeción estable.
- Induce un flujo de viruta suave  
→ Incrementa la vida del inserto

#### Filo de corte secundario ancho

- Mejor acabado superficial.
- Mecanizado multiusos, incluyendo plunging

#### Filo de corte con ángulo de ataque positivo

- Mejora de la maquinabilidad y reduce la resistencia al corte

MAX. ap  
WNGX08: 8.2 mm  
WNGX04: 4.3 mm

#### Superficie de incidencia en flanco de 3 niveles

- Mejora la rigidez y permite una sujeción estable  
→ Mejora la estabilidad de corte

### Características de la fresa

#### Diseño aerodinámico del soporte

- Mejora la evacuación de viruta en profundidad, asear y ranurar

#### Tornillos de sujeción fuertes

- Tornillos de sujeción fuertes de mayor diámetro que permiten una sujeción rígida

#### Sistema refrigeración interior

- Mejora el flujo de viruta y la vida útil de la herramienta gracias al enfriamiento del inserto

#### Sistema de soporte de 3 lados

- Vida de herramienta estable

$Lmin = ap / \tan(\alpha^\circ)$

Lmin: Longitud de corte según ángulo de bajada

ap: profundidad de corte axial

α°: ángulo de bajada disponible para mecanizado en rampa

## Rich Mill RM8

### Características

- Inserto innovador de doble lado, lo que hace posible utilizar los 8 filos, resultando mas economico y eficiente que el usat insertos convencionales Planeado simple.
- Geometría unica con gran ángulo de incidencia que garantiza un exelenteacabado, aplicable para varios tipos de materiales como Acero, Acero Inoxidable,Fundición y Aluminio.
- Exelente convinación de geometría innovadora y variedad de grados, garantizando durabilidad de la herramienta.
- Inserto disponible en varioas rompevirutas que pueden ser aplicadas a diversos tipos de maquinados
- Los cortadores Rich-Mill son muy ligeros, ideales para su uso en maquinado a altavelocidad, asi mismo en emaquinado de bajo poder.

### Sistema lubricación interno

- El perno de refrigerante exclusivo está adaptado para obtener una mejor evacuación de viruta y un enfriamiento más potente. Para obtener una evacuación óptima de las virutas, la dirección de inyección del refrigerante se ha diseñado para alcanzar cada uno de los filos de corte directamente. Se requiere adaptador con capacidad para refrigerante

El sistema de refrigeracion ayuda a disminuir la temperatura en el cortador y mejorar la evacuacion de virutas

### Características de los rompevirutas

| Insertos | Filo de corte | Usos                                | Características  |
|----------|---------------|-------------------------------------|--|
| MA       |               | Para aluminio                       | Gracias a lo agudo del filo y lo pulido de la superflcie, garrantiza el buen flujo de la viruta, evitando la adhercion |
| ML       |               | Para materiales difíciles de cortar | El rompevirutas con baja carga de corte es óptimo para el mecanizado de materiales difíciles de cortar                 |
| MF       |               | Corte ligero                        | Debido a la baja carga de corte es recomendado para cortes ligeros y materiales difícil de cortar                      |
| MM       |               | Corte general                       | Recomendado para uso en general  |
| W        |               | Wiper                               | Diseño especializado borde puede ser adecuado para un funcionamiento excelente rugosidad de la superflcie              |

### Usos

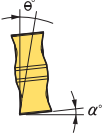

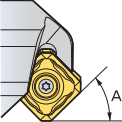

Careado

### Característica del inserto

| Insertos | Filo de Corte          | Características   |
|----------|------------------------|---|
|          | <b>Vista-A</b><br>     | La característica de la rompevirutay el angulo positivo, da resultado la baja carga de corte.                         |
|          | <b>Vista-B</b><br>     | Diseño con wipwer y menor filo de corte y el acabado superflcial  |
|          | <b>Rompeviruta</b><br> | Baja carga de corte gracias a lo positivo del inserto, diseño de la rompeviruta y la forma de sentarlo en el cortador |

## Rich Mill RM8

### Configuración del ensamblaje

| Forma   | Configuración del inserto en el cortador  | Características  |
|---|---|--|
|  |  | El gran angulo positivo de incidencia ayuda a tener una baja carga de corte                          |
|   |  | Recomendable para careado, planeo, y chaffaneo<br>• RM8A A = 45°<br>• RM8E A = 75°<br>• RM8Q A = 88° |

## Rich Mill RMH8

### Características

- Sistema de sujeción de tornillo
  - Sistema de sujeción adaptable y estables
- Rigidez reforzada y mayor poder de sujeción
  - Aplicando sistema con placa de apoyo, previene daños al cortador cuando el inserto se quiebra.
- Implementación de placa de apoyo
  - Usando varios tipos de cortador (Ángulo de acercamiento 45°, 75°, 80°)
  - Poder de sujeción estable con inserto

RMH8A  
(AA 45°)

RMH8E  
(AA 75°)

RMH8Q  
(AA 88°)

## Rich Mill RMT8

### Características

- Mejorado sistema de sujeción con abrazadera asegura una mejor fuerza de corte y gran avance, además de un cambio fácil de inserto
- Los nuevos grados con resistencia al rebabeo proporcionan un mejor control de las virutas y mayor vida a la herramienta
- Debido al rompevirutas especialmente diseñado, todas las operaciones son posibles
- RMT puede sustituir una herramienta convencional de fresado ISO.

### Características de la fresa

Alta rigidez del cuerpo del cortador para mayor durabilidad

El diseño 3-dimensional de la rompeviruta brinda un mejor control de virutas

Mejorado sistema de sujeción con abrazadera asegura una mejor fuerza de corte y gran avance, además de un cambio fácil de inserto

Inserto de doble cara de 8filos, eficiencia en costo

### Característica del inserto (Der./Izq.)

8 filos de corte

Grados revestidos con resistencia a la fractura mejorada

Baja carga de corte, debido al alto ángulo de la rompeviruta

La forma del compartimento brinda mejor fijación a la brida

Diseño óptimo del filo menor de corte para su uso der/izq y buena aspereza superficial de corte

### Análisis de fuerza de sujeción

### Características de los rompevirutas

|    | Insertos | Filo de corte | Usos             | Características   |
|----|----------|---------------|------------------|---|
| MF |          |               | Acanado fino     | Debido a su baja carga de corte es recomendado para corte ligero en laterales difíciles de cortar, HRSA |
| MM |          |               | Corte en general | Diseño recomendado para fresado en general  |

### Grados y Rompevirutas Recomendadas

## Rich Mill RM16

### Características

- Inserto económico de 16 filos
- Reducción del costo Inserto por Filo
- Los insertos Wipers pueden utilizarse para un mejor desbaste en superficies
- Haciendo juego con un óptimo diseño de corte especial y con la variedad de nuevos grados, se proporciona mejor consistencia de corte y se alarga la vida del inserto y de la herramienta.
- Cuando son utilizados los 16 filos, la profundidad máxima es de 5.5 mm pero si solo utiliza 8, la profundidad máxima será de 13 mm
- Los insertos wipers son colocados 0.05 mm más abajo en comparación a los insertos que son montados en el cortador.
- Cuando la alimentación es más grande que la longitud del filo (7 mm), 2 insertos wiper serán colocados en posición simétrica.

### Características del rompevirutas

| Insertos | Filo de corte | Usos                                | Características  |
|----------|---------------|-------------------------------------|--|
| MA       |               | Aluminio Corte Ligero               | Con esta rompeviruta se logra mayor productividad, especialmente para el corte de aluminio             |
| ML       |               | Para materiales difíciles de cortar | El rompevirutas con baja carga de corte es óptimo para el mecanizado de materiales difíciles de cortar |
| MF       |               | Corte ligero                        | Debido a su baja carga de corte, es recomendable para corte ligero y materiales difíciles de cortar    |
| MM       |               | Corte en General                    | Diseño recomendado para fresado en general   |
| W        |               | Wiper                               | Recomendado para un mejor desbaste en superficie que las rompevirutas MM y MF                          |

### Posición para insertos Wiper

| Mano de corte | Sentido Correcto | Sentido Incorrecto |   |   |   |
|---------------|------------------|--------------------|---|---|---|
| Derecha       |                  |                    |   |   |   |
| Ensamblaje    | ○                | ×                  | × | × | × |
| Izquierda     |                  |                    |   |   |   |
| Ensamblaje    | ○                | ×                  | × | × | × |

### Sistema lubricación interno

- Cavidad mejorada para un mejor desalojo de virutas
- A través del sistema de refrigeración, se elimina el calor del cortador y es evacuada con mayor facilidad la viruta

### Condiciones de corte recomendadas

Cuerpo liviano asegurando excelentes resultados en maquinado a alta velocidad

## Aero Mill

- Excelente desempeño al maquinar, especialmente para trabajar a alta velocidad, debido a lo ligero del cuerpo de aluminio 50% mas ligero que uno de cuerpo de acero.
- El aluminio especial y el alto ángulo de incidencia del inserto prevee rigidez y un estable maquinado al cortador aero mill.
- Alta calidad en los acabados superficiales se pueden conseguir con este cortador debido a la baja carga de corte por el alto ángulo de incidencia.
- Balanceado a nivel 2.5 G

### Montaje de fresa

### Características de la fresa

- El localizador mejora la durabilidad del cortador.
- Es posible ser usado para en los dos tipos : tipo inserto y tipo navaja
- El tipo de desahogo garantiza un flujo suave de la viruta
- Carburo cementado e insertos pcd, pueden ser seleccionados para varíaos materiales.
- El cubre viruta esta diseñado para evitar que el cortador sufa daños o desgastes en el cuerpo de aluminio

### Sistema lubricación interno

- Diseñado especialmente, el sistema de refrigeración provee refrigeración desde el centro del cortador hacia el inserto, intensifica la refrigeración y esto ayuda a tener un mejor flujo de evacuación de la viruta.
- Diseñado especialmente el disparador direccional del sistema refrigera directo al filo inserto, maximizando la evacuación de la viruta
- El tornillo puede ser utilizado en mas de 160 diferentes Holders.

Perno Refrigerante

Para Ø80~Ø160

Cuierta Refrigeracion

Para Ø200 y más

## Cabeza con forma de cono de taladrado indexable

# Aero Mill-Plus

- Mejore la vida útil de la herramienta hasta un 20% con un sistema de refrigerante que permite Spray de enfriamiento a cuchillas de corte
- Habilite el fresado de alto avance aumentando el número de cuchillas de corte en un 20% A través de un método de acoplamiento simplemente estructurado para pinzas
- Reduce el tiempo de configuración hasta en un 40% aplicando un método de ajuste de llave inglesa
- Introduzca un cuerpo de corte de aluminio para proporcionar un corte superior Rendimiento durante el fresado a alta velocidad

## Montaje de fresa

## Características de la fresa

- Evite la sobrecarga en los cojinetes del husillo a través de la reducción de peso del cuerpo de aleación de Al y permita un procesamiento de alta velocidad
- Proporcionar un diseño de cortador dedicado a las cuchillas PCD para ofrecer una vida útil estable de la herramienta y un aumento de las cuchillas aplicadas
- Mejore la vida útil de la cuchilla aplicando un sistema de refrigerante que permite el enfriamiento directo por aspersión a las cuchillas de corte
- Adopte un método de sujeción con estructura simple sin tornillo de fijación.
- Reduzca el peso y aplique un perno de refrigerante que se utiliza exclusivamente para Aero-Mill Plus que aplica refrigerante para eliminar el chip interno

El buen desempeño en tamaños de operación pequeña

# Aero Mill-Mini

- El buen desempeño en tamaños de operación pequeña - mediana.
- Buena duración del cuerpo de acero.
- Elección de carburo sin recubrimiento/grado de PCD se pueden ser aplicados a diversos tipos de material de trabajo.
- Balanceado a: G25

## Características de la fresa

- Diseño sencillo y fuerte sistema de sujeción.
- Margen ajustable:  $\pm 0,1$  mm Max
- Paso ajustable: mín. 2 micro metro.
- Amplia zona de alojamiento de la viruta para desbaste y el maquinado de aluminio.
- Sistema de enfriamiento interno

# E Información técnica Alpha Mill-X

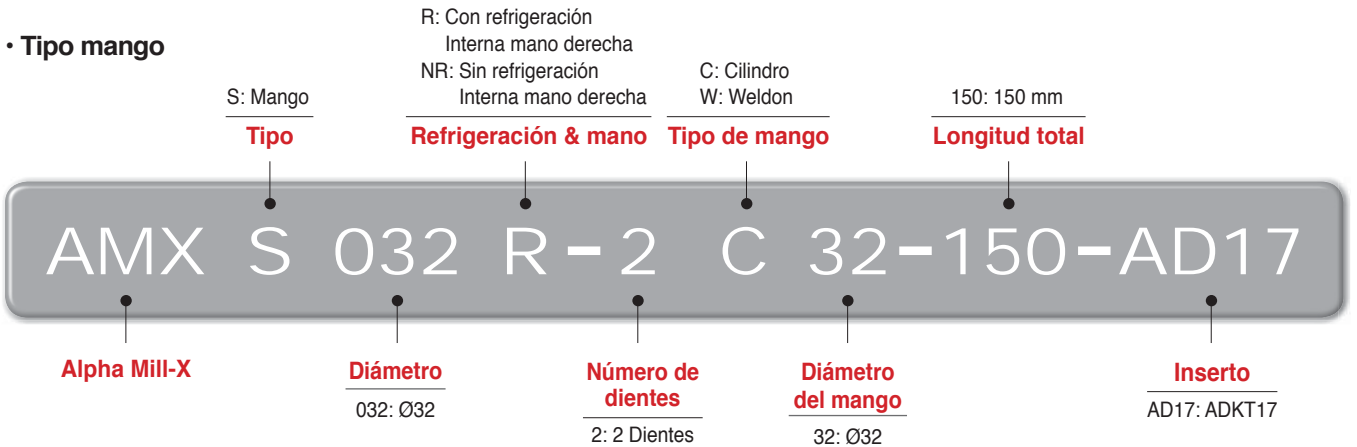

Herramienta de fresado para alta productividad con buena perpendicularidad y minimización de la carga de corte

## Alpha Mill-X new

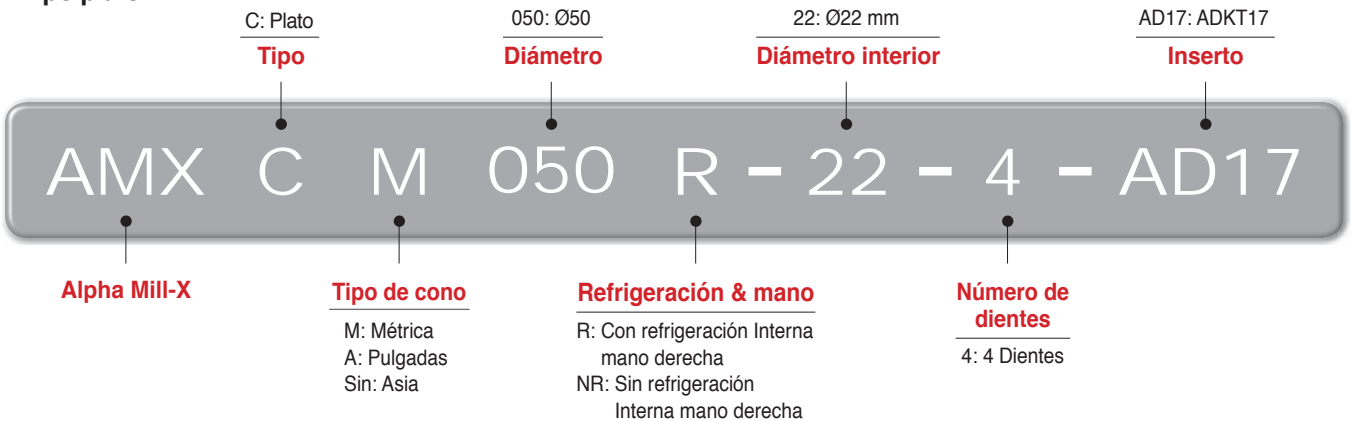

- Su perpendicularidad superior se logra mediante su diseño, optimizado para un acabado superficial de alta calidad.
- Carga de corte y rebabas minimizadas debido al filo de corte diseñado con un ángulo de corte altamente positivo.
- Productividad mejorada debido a la capacidad de la herramienta para mecanizar a alta velocidad y a alto avance (en comparación con las herramientas existentes, la velocidad de corte y el avance por diente aumentan en un 15%).

### 🔗 Sistema de codificación

#### • Tipo mango

#### • Tipo plato

### 🔗 Carga mecánica

### 🔗 Área de aplicación

**Características**

**Rompeviruta con un ángulo de ataque muy positivo**

- Alto ángulo de ataque
- Mejor control de viruta

**Filo secundario con una función de Wiper (Filo secundario más largo para mejor acabado)**

- Filo de corte secundario optimizado para una superficie excelente en superficies mecanizadas

**Área de sujeción plana**

- Sujeción estable incluso a alta velocidad y alto avance

**Filo de corte agudo**

- Mejor acabado superficial
- Baja carga mecánica

**Cavidad de viruta ancha**

- Control de viruta maximizado
- Excelente control de viruta en mecanizado de alta velocidad y alto avance

**Perpendicularidad perfecta**

- Filo de corte diseñado con un alto ángulo de ataque: disminución de la carga de corte.
- Inserto más grueso: alta rigidez del inserto

► **Óptimo para mecanizado de alta velocidad y alto avance.**

**Condiciones de corte para rampas y operaciones helicoidales**

| Designación | Diámetro de herramienta ØD | ap   | 1. Mecanizado en rampa |       | 2. Corte helicoidal               |             |                                   |             |                                   |             |

Insertos disponibles E04 Detalles del cortador E400~E402

Los cortadores tienen una amplia gama de aplicaciones

# Alpha Mill

- El diseño innovador del filo del cote curo y el rompeviruta asegura un corte de 90° y una menor resistencia al corte.
- Los cortadores tienen una amplia gama de aplicaciones : Chapeado, mortajado, planeado, etc.
- Exelentes resultados garantizados en los cortes de gran profundidad, gracias a su filo de corte resistente y baja resistencia al corte.

## Característica del inserto

- Larga vida a altas velocidades, alto avance y profundidad en el corte debido a la baja resistencia de corte y su resistente flio
- La característica distintiva de la curva del Alpha-Mill reduce la resistencia al corte y mejora la resistencia al desgaste del filo de corte

- La baja resistencia al corte es lograda por el esclusivo diseño de KORLOY
- La aplicación del grado ideal permite un maquinado altamente eficiente

## Ejemplo de Aplicación

### Planeado

### Mortajado

### Barrenado

### Plano Inclinado

### Operacion Helicoidal

## Alpha Mill Nick **new**

- Filo de corte aserrado (dentado) reduce la carga mecánica
- Alta productividad
- Los insertos Alpha Mill Nick son compatibles con los portaherramientas estándar para insertos APMT, reduciendo los gastos de existencias y almacenaje

### Características

- Baja carga de corte gracias a los filos aserrados sobrepuestos

Inserto nick aserrado

Inserto normal

- ※ El mecanizado con insertos tipo nick con filos aserrados requiere del uso de ambos rompevirutas
- ※ Pueden ser usados con los portaherramientas Alpha Mill existentes. Recomendamos el uso de las fresas de filo largo para maximizar el rendimiento y obtener resultados excelentes (usar siempre fresas con número par de dientes/canales)

| Tipo                                   | Insertos nick aserrados  |  | Insertos generales  |
|--|--|--|---|
| Número de dientes requeridos           | 20   |  | 20  |
| Para AMCM3080M (4 canales x 5 dientes) |  x 10<br>APMT16-MN3 |  x 10<br>APMT16-MN4 |  x 20<br>APMT16-MM, MF, ML, MA |

### Disposición de los insertos en la fresa

- Alterne los dos tipos de rompevirutas al usar estos insertos para un resultado óptimo

### Profundidad mínima de corte

- La profundidad de corte debe ser mayor que la distancia min1 indicada en la imagen para que la viruta sea fragmentada

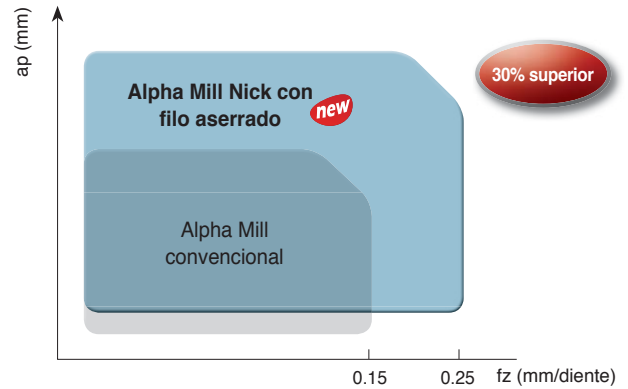

| Tipo               | ap min1 | ap min2 |
|--------------------|---------|---------|
| APMT11 (Tipo 2000) | 1.6 mm  | 4.1 mm  |
| APMT16 (Tipo 3000) | 2.2 mm  | 5 mm    |
| APMT18 (Tipo 4000) | 2.3 mm  | 5.5 mm  |

### Ejemplos de aplicación

### Área de aplicación

• Condiciones de corte un 30% superiores en comparación con los modelos convencionales

### Condiciones de corte recomendadas

| ISO | Grados | APMT 2000 Tipo |                |         | APMT 3000 Tipo |                |         | APMT 4000 Tipo |                |         |

\* Información extra: por favor tenga en cuenta que en caso de adquirir los insertos APMT-MN tiene que adquirir los dos tipos de rompevirutas disponibles (MN2 y MN3).  
 \* Por favor, usar fresas con un número par de dientes (canales); no usar fresas con número impar de dientes.

※ Información extra: por favor tenga en cuenta que en caso de adquirir los insertos APMT-MN tiene que adquirir los dos tipos de rompevirutas disponibles (MN2 y MN3).  
 ※ Por favor, usar fresas con un número par de dientes (canales); no usar fresas con número impar de dientes.

### Cuidado cuando se aplica insertos al cortador

### Partes

| Especificaciones | Tornillo   | Llave |

※ Información extra: por favor tenga en cuenta que en caso de adquirir los insertos APMT-MN tiene que adquirir los dos tipos de rompevirutas disponibles (MN2 y MN3).  
 ※ Por favor, usar fresas con un número par de dientes (canales); no usar fresas con número impar de dientes.

## Cuidado cuando se aplica insertos al cortador

## ➤ Sistema de codificación (Modulos tipo)

|                               |                          |                      |                           |
|-------------------------------|--------------------------|----------------------|---------------------------|
| BT50 MAT M16 092              |                          |                      |                           |
| <b>Tipo Eje</b>               | <b>Categoría de ítem</b> | <b>M Dimensiones</b> | <b>Longitud Total (L)</b> |
| BT30/40/50<br>HSK40/50/63/100 | MAT                      | M16                  | 092: 92                   |

## Sistema DBT

### ➤ Características de los adaptadores (D)BT

- Garantiza una mayor fuerza de de acoplamiento con el agarre a dos caras
- Garantizar fortalecer el corte a alta velocidad.
- Garantiza una mejor textura superficial

|   |   |
|---|---|
| <b>DBT (Fuerza Restrictiva, Mejorado Corte)</b>                                     | <b>BT</b>   |
| Doble lados Restrictivos (Conico, 1 parte)  | Un lado restrictivo (Conico)  |
|  |  |
| DBT Pieza Trabajo<br>Ra = 0.3 µm  | BT Pieza Trabajo<br>Ra = 0.5 µm   |

## Sistema HSK

### ➤ Características de los adaptadores HSK

- Garantía de aplicación de la fuerza fuerte por la aplicación la cara 2
- Garantía de fortalecimiento de corte a alta velocidad
- Garantía de rugosidad superficial superior
- Garantía de la exactitud en la dirección del eje y la dirección repetida

### ➤ HSK Compatción de Tolerancia

| Arbor tipo | Max. tolerancia | Min. tolerancia | Disponible instalación |
|------------|-----------------|-----------------|------------------------|
| HSK-T      | 0.075           | 0.035           | Maquinas Multi-Tareas  |
| HSK-A      | 0.33            | 0.08 (General)  | MCT                    |

### HSK A: HSK T Compatción de Tolerancia

※ Información extra: por favor tenga en cuenta que en caso de adquirir los insertos APMT-MN tiene que adquirir los dos tipos de rompevirutas disponibles (MN2 y MN3).  
 ※ Por favor, usar fresas con un número par de dientes (canales); no usar fresas con número impar de dientes.

Modulos disponibles E42, E43

**Amplia cobertura de piezas de trabajo de aluminio, acero y fundición**

# Future Mill

- Se pueden obtener excelentes resultados, especialmente en cortes a alta velocidad, gracias a sus ligeros cortadores de aluminio que pesan 50% menos que los cortadores de acero convencionales.
- Muy fácil de manejar gracias a su peso ligero.
- Amplia cobertura de piezas de trabajo de aluminio, acero y fundición.
- El cartucho evita que los cortadores raspen o dañen la pieza de trabajo, proporcionando una larga vida al cortador de aluminio
- Variedad de rompevirutas para una amplia gama de aplicaciones

## Características de cortador

- El firme apriete con doble tornillo garantiza un soporte estable al inserto.
- El ángulo agudo del filo de corte garantiza un montaje estable.
- El amplio alojamiento de viruta facilita la eliminación de viruta.
- El aluminio especial de los cortadores proporciona un maquinado estable

## Como se ensambla el cortador

## Cartucho

## Sistema de refrigeración interna

- Sistema de refrigerante interno especialmente diseñado, que despacha refrigerante desde el centro del cortador hacia el inserto. Aumenta la velocidad de refrigeración y propiedad de eliminación de viruta.
- Máxima eliminación de viruta gracias a que el refrigerante se despacha directamente al filo de corte del inserto.
- Perno del refrigerante utilizable hasta @160, tapa del refrigerante utilizable a partir de @200. Ambos dispositivos se venden por separado.

## Rango de Aplicación as per Pieza Trabajo

## Velocidad de Corte

## ➤ Máxima revolución disponible

| Diam. Cortador | Revoluciones Max. |
|----------------|-------------------|

| Ø200           | 6,500             |
| Ø250           | 5,000             |
| Ø315           | 4,000             |

## Future Mill (FMA)

### ➤ Características

- El paso de la fresa se puede ajustar al cambiar el número de insertos por diámetro específico, y los varios rompevirutas ofrecen una amplia gama de aplicaciones.
- Sus cortadores ligeros permiten maquinar a alta velocidad sin producir vibraciones, por lo que se puede usar en máquinas con menor potencia.
- Su amplio ángulo de salida produce una baja fuerza de corte y facilita el corte

### ➤ Características del rompevirutas

| Rompeviruta | Filo de corte | Usos             | Características   |
|-------------|---------------|------------------|---|
| None<br>C/B |               | Corte Ligero     | Rugosidad de acabado superior, gracias al inserto de cermet.  |
| MF          |               | Corte Ligero     | Calidad de corte superior en materiales ligeros o difíciles de cortar, gracias al rompevirutas de baja resistencia al corte.  |
| MM          |               | Corte en General | Recomendable para una amplia gama de cortes gracias a su diseño especial para cortes en general.  |
| MR          |               | Roughing         | El filo de corte resistente proporciona un mejor rendimiento de corte estable y uniforme inclusive bajo condiciones de intermitencia severa.  |
| MA          |               | Para Aluminio    | Calidad de corte superior en cortes de aluminio al aplicar el filo y pulido adecuado.<br>- S□ET-MA: Filo de corte extremadamente agudo debido a la precisión del afilado<br>- S□XT-MA: Filo de corte adecuado para desbaste |

# Future Mill (FMP)

## Características

- Excelente vida de herramienta garantizada en cortes de gran avance y profundidad con baja resistencia al corte.
- El diseño innovador del filo de corte curvo reduce la resistencia al corte y aumenta la resistencia del mismo. (②)
- El distintivo diseño del rompevirutas asegura el libre flujo de la viruta. (①)
- Hay grados disponibles para la mayoría de los materiales, tales como acero, acero inoxidable, fundición y aluminio.

## Ej. de Maquinado

## Características y aplicación del inserto

- El diseño innovador del filo de corte curvo y el rompevirutas asegura un corte de 90 grados y una menor resistencia al corte.
- Los cortadores multifuncionales tienen una gama de aplicaciones (Chapeado, mortajado, planeado, etc.)
- Los insertos con vida mejorada logran una aplicación óptima en cada ocasión.
- Excelentes resultados garantizados en cortes de gran profundidad, gracias a su filo de corte resistente y baja resistencia al corte.

## Rompevirutas y grados recomendados según pieza de trabajo

| Rompeviruta | Filo de corte | Usos | Rompevirutas y grados recomendados según pieza de trabajo (●: 1ª recomendación) |                                  |                                    |        |                  |                                  |           |                                  |                      |                      |                |   |

## Future Mill (FMR)

### Características

- Amplia cobertura de materiales para moldes, aleación de acero, acero endurecido, etc.
- La forma del inserto le proporciona una excelente colocación y ajuste.
- Insertos de 4~8 filos.
- La distribución irregular de los insertos previene vibraciones.
- El diseño preciso de la base de posicionamiento del inserto previene vibraciones.
- El diseño especial de la base del inserto evita que se mueva o vibre.
- El filo de corte es f.cilde cambiar, ya que el inserto cuenta con un diseño para prevenir rotaciones.

### Usos

RDKT1605M0-MM  
RDKT2006M0-MM

Proporciona un buen acabado de superficie gracias al diseño preciso de la base de posicionamiento del cortador

Buen rendimiento sin vibraciones gracias a la distribución regular de los insertos

**Diseño especial del rompevirutas para bajas cargas de corte.**  
Reduce la generación de calor, ya que la viruta flujer más fácilmente.

**Filo de corte especial**  
Preparación Nega-land aplicada  
Buen acabado de superficie gracias a su baja carga de corte.

**Contacto de la cara curvada**  
Previene la rotación del inserto durante el maquinado.  
Estable ajuste del inserto.  
Buen posicionamiento del inserto.

## Future Mill (FMR)

# Future Mill (FMR)

## Prueba de Vibración FMR

### Ej. Maquinado

- **Pieza Trabajo** STD11
- **Condicion Corte**
  - vc (m/min) = 200
  - fz (mm/diente) = 0.40
  - ap (mm) = 2.0
  - ae (mm) = 4.0
- **Denominación**
  - Insertos** RDKT10T3M0-MM (PC3500)
  - Porta herramienta** FMRS3032RD-S

## Formulas para Fresado

| Vel de Corte | RPM |
|--------------|-----|
|--------------|-----|

$$vc = \frac{\pi \times D \times n}{1000} \text{ (m/min)}$$

$$n = \frac{vc \times 1000}{\pi \times D} \text{ (min}^{-1}\text{)}$$

| Avance (por diente) | Avance (por minuto) |
|---------------------|---------------------|
|---------------------|---------------------|

$$vf = \frac{vf}{Z \times n} \text{ (mm/diente)}$$

$$vf = fz \times n \times z \text{ (mm/min)}$$

| Rango de desalhojo de viruta | Poder de Maquinado Requerido |
|------------------------------|------------------------------|
|------------------------------|------------------------------|

$$Q = \frac{ap \times ae \times vf}{1000} \text{ (cm}^3\text{/min)}$$

$$Pkw = \frac{Q \times kc}{60 \times 102 \times \eta} \text{ (kW)}$$

$$Php = \frac{Pc}{0.75} \text{ (hp)}$$

|                                       |  |
|---------------------------------------|--|
| vc = Vel. de Corte (m/min)            | Pkw = H.P.Requeridos (kW)                      |
| n = R.P.M (min <sup>-1</sup> )        | H = Hp Requerido (hp)                          |
| D = Diam. De Corte (mm)               | Q = Desalhojo de Viruta (cm <sup>3</sup> /min) |
| De = Diametro de Corte Eficiente (mm) | ap = Profundidas de Corte (mm)                 |
| vf = Avance por min (mm/min)          | ae = Anchura del Corte (mm)                    |
| fz = Avance por Diente (mm/diente)    | kc = Resistencia de Corte Especifica (MPa)     |
| z = Avance por Diente                 | η = Eficiencia Mecanica (%)                    |
| Pc = Poder Requerido (kW)             |  |

## Alimentación según profundidad de corte

| Codigo       | Rompeviruta | Profundidad de Corte (mm) |         |      |      |      |      |      |      |      |

## Future Mill (FMR)

### Información técnica de Plano Inclinado

$$L_{min} = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

※ Lmin: Inclinación Min. de corte  
 $\alpha^\circ$ : Angulo Max. plano inclinado  
 ap: Profundidad de corte.

(mm)

## Future Mill (FMR)

### Información en corte helicoidal - ØDHmax

- ØD = diam. de la Herramienta (mm), ØDHmin, Max = Diametro Min, Max (mm)
- Ød = Trayectoria Hetta (mm)
- ØDHmin (Diametro Max) = ØD x 2 - Tam. Inserto, ØDHmax (Diametro Max) = ØD x 2 - 2
- Ød (Trayectoria de la hetta) = ØDHmin, Max - ØD

(mm)

Serie para moldes Future Mill

# FMR P-positive

- El sistema de sujeción estable permite un mecanizado y productividad estables
- La variada línea de productos garantiza una amplia gama de aplicaciones
- Forma y calidad óptimas con alta dureza para el mecanizado de materiales difíciles de cortar

## Características

- El ángulo positivo de 11°, P, asegura una gran rigidez en maquinado de moldes de acero y la posibilidad de mecanizar aleaciones de alta resistencia.
- La superficie plana del inserto evita la interferencia y la revolución durante el mecanizado
- Grados óptimos y rompevirutas para diversas piezas
- rompevirutas
  - La forma cóncava asegura un bolsillo de viruta ancho y baja temperatura de corte
  - Despeje de la cara para evitar la rotación.
  - Previene la rotación en el mecanizado.
  - Divide las esquinas
  - Previene las interferencias en el mecanizado de alta alimentación.
  - Asegura una sujeción estable.
- Sistema de refrigeración interna.
  - Excelente evacuación de viruta.
  - El bajo calor de corte asegura una larga vida útil de la herramienta

## Características de los rompevirutas

| Rompeviruta      |  | Filo de corte | Usos                             | Características   |
|------------------|--|---------------|----------------------------------|---|
| MA               |  |               | Maquinado de aluminio            | El filo óptimo para el mecanizado de aluminio y la superficie pulida garantizan una alta maquinabilidad   |
| ML               |  |               | Titanio e inconel                | Excelentes resultados en mecanizado de titanio gracias al filo de corte de alta dureza y el rompevirutas positivo que reduce la carga de corte. |
| MF               |  |               | Acabado                          | El rompevirutas para una baja resistencia al corte permite un acabado fino  |
| MM               |  |               | Maquinado general                | Uso general   |
| Sin rompevirutas |  |               | Maquinado de metales endurecidos | Para acero endurecido y aleaciones termorresistentes  |

## Condiciones de corte recomendadas

## ➤ Análisis de prueba

### Acero aleado (SM490A Tratamiento térmico, HRC 38~40)

- Condiciones de Cortes**
  - vc (m/min) = 250
  - fz (mm/diente) = 0.6
  - ap (mm) = 1
  - Refrigerante
- Herramientas**
  - Insertos RPMT1204M0E-MF (PC5300)
  - Porta herramienta FMRS4032HRP-3L25

### Acero aleado bajo pre-endurecido (KP4M Tratamiento térmico, HRC 30~45)

- Condiciones de Cortes**
  - vc (m/min) = 178
  - fz (mm/diente) = 0.72
  - ap (mm) = 1.5
  - Seco (sin refrigerante)
- Herramientas**
  - Insertos RPMT1606M0S-MM (PC5300)
  - Porta herramienta FMRCM5063HRP-4

### Acero aleado bajo pre-endurecido (KP1, HRC 28~33)

- Condiciones de Cortes**
  - vc (m/min) = 178
  - fz (mm/diente) = 0.74
  - ap (mm) = 0.8
  - Seco (sin refrigerante)
- Herramientas**
  - Insertos RPMT1204M0E-MF (PC5300)
  - Porta herramienta FMRCM4063HRP-6

### Acero aleado bajo pre-endurecido (STD61, HRC 50~52)

- Condiciones de Cortes**
  - vc (m/min) = 50
  - fz (mm/diente) = 0.15
  - ap (mm) = 4.0
  - Seco (sin refrigerante)
- Herramientas**
  - Insertos RPMW1204M0S1 (PC5300)
  - Porta herramienta FMRS4032HRP-3L25

## FMR P-positive

### Ángulo máximo para maquinado en rampa

$$L_{min} = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

\* L (mm): Longitud de corte  
 $\alpha^\circ$ : ángulo máximo de rampa  
 ap: Profundidad de corte

(mm)

| Tamaño fresa | Tamaño inserto (d) | Diámetro herramienta. (ØD) | Ángulo de rampa $\alpha^\circ$ (max) | Longitud de corte (mm) según ap |        |          |        |          |        |        |        |        |         |

\* Tamaño inserto (d): por favor refiérase a las páginas E19 y E20 para los planos de los insertos disponibles

## FMR P-positive

### ↳ Listado de diámetros mínimos de agujeros a maquinarse para maquinado helicoidal (ØDHmin)

- ØD = Diámetro herramienta. (mm)
- ØD (Paso de la herramienta, mm) = ØDHmin, Max - ØD
- ØDHmin (Diámetro mínimo agujero) = ØD × 2 - Tamaño inserto (d)
- ØDHmax (Diámetro máximo agujero) = ØD × 2 - 2

• Ángulo de rampa según Ap ( $\alpha^\circ$ ) =  $\tan^{-1}\left(\frac{ap}{\pi \times \text{Ød}}\right)$   
 Ángulo de rampeado circular no puede exceder ángulo máximo

- ap = Profundidad de corte

(mm)

| Tamaño fresa | Tamaño inserto (d) | Diámetro herramienta. (ØD) | Ángulo de rampa α° (max) | ØDHmin | Ød  | Ángulo de rampa según Ap(α°) |        |          |        |          |        |        |        |        |         |   |   |

\* Tamaño inserto (d): por favor refiérase a las páginas E19 y E20 para los planos de los insertos disponibles

**FMR P-positive**

**Listado de diámetros máximos de agujeros a maquinarse para maquinado helicoidal (ØDHmax)**

- ØD = Diámetro herramienta. (mm)
- Ød (Paso de la herramienta, mm) = ØDHmin, Max - ØD
- ØDHmin (Diámetro mínimo agujero) = ØD x 2 - Tamaño inserto (d)
- ØDHmax (Diámetro máximo agujero) = ØD x 2 - 2
- Ángulo de rampa según ap ( $\alpha^\circ = \tan^{-1}\left(\frac{ap}{\pi \times \text{Ød}}\right)$ )
- Ángulo de rampeado circular no puede exceder ángulo máximo
- ap = Profundidad de corte

(mm)

| Tamaño fresa | Tamaño inserto (d) | Diámetro herramienta. (ØD) | Ángulo de rampa α° (max) | ØDHmin | Ød  | Ángulo de rampa según ap(α°) |        |          |        |          |        |        |        |        |         |

## Fresa de alto avance con cuatro filos de corte por inserto

# HFMD **new**

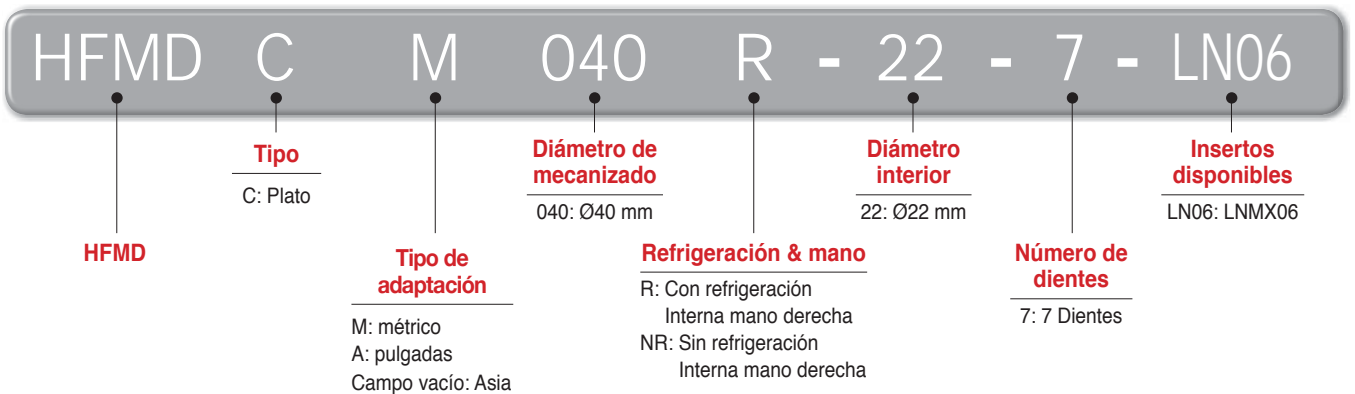

- Inserto económico de doble cara con 4 filos de corte disponibles
- Mayor productividad debido al ancho de los insertos, posibilitando un paso más estrecho y mayores avances
- Inserto diseñado para disminuir la carga de corte, con un alto ángulo de ataque y ángulo de hélice que reducen la carga de corte
- Inhibición de astillado y rotura debido al sistema de sujeción cóncavo y el amarre con tornillos más fuertes

### 🔗 Sistema de codificación

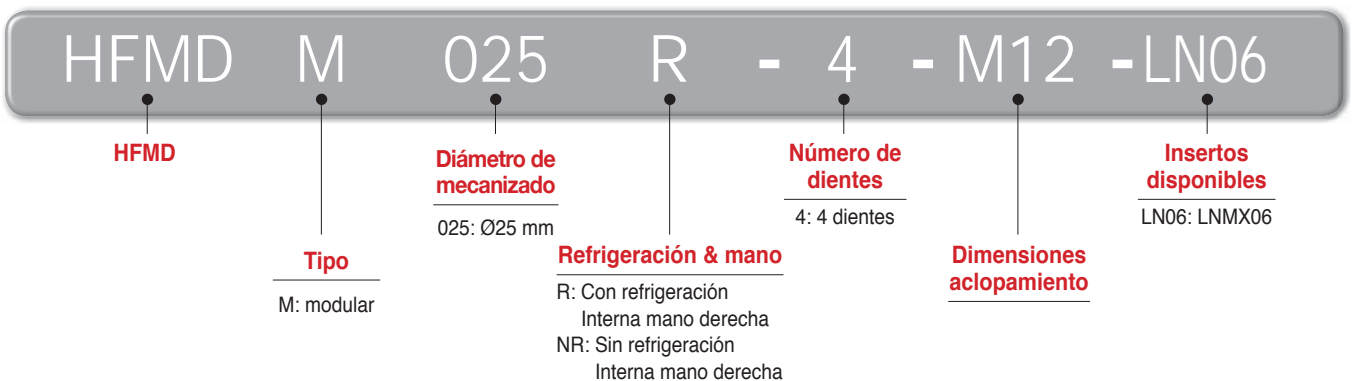

#### • Tipo Mango

#### • Tipo Plato

#### • Tipo Modular

### Características

• **Inserto que posibilitan pasos estrechos mejorando la eficiencia**

- Pasos muy estrechos disponibles
- Pasos más estrechos que otras fresas de igual diámetro, debido al núcleo (círculo inscrito) de menor diámetro (A < B)

※ Diámetro de herramienta: Ø25 mm

• **Insertos económicos de 4 filos de corte**

- Dos caras disponibles
- Paso muy estrecho que posibilita un alto avance

• **Inserto garantiza una fuerte fuerza de sujeción**

- ① Sistema de sujeción cóncavo
- ② Área de sujeción de la cara inferior más ancha
- ③ Tornillo de mayor diámetro

• **Inserto diseñado para bajar la carga de corte**

- Alto ángulo de ataque y ángulo de hélice minimizan la carga de corte en comparación con los productos de la competencia y otros insertos positivos

### Características del rompevirutas

| Inserto | Filo de corte | Usos   | Características   |
|---------|---------------|--|---|
| ML      |               | Para aleaciones termorresistentes, Titanio e Inconel | Garantiza una calidad de mecanizado superior gracias a la acción del rompevirutas de baja resistencia al corte y el diseño del filo, de alta resistencia, adecuado para mecanizar aleaciones termorresistentes. |
| MF      |               | Para corte ligero                                    | Para mecanizado ligero con un rompevirutas que minimiza la carga de corte.  |
| MM      |               | Propósitos múltiples                                 | Disponible para distintos materiales. Diseño general para mecanizado de alto avance.  |

## Pruebas de rendimiento

### Acero Aleado (SCM440, HB250)

- Pieza** Superficie de acero rectangular (300x200x100)
- Condiciones de corte** vc (m/min) = 180, fz (mm/diente) = 1.0, ap (mm) = 0.8, ae (mm) = 20, seco
- Herramientas** Insertos LNMx060310R-MF  
Porta HFMDs032R-5C32-200-LN06 herramienta (Ø32, 5T)

- Régimen de arranque de viruta, Q (cm³/min): 143.2
- Tiempo de corte (min): 46.9

### Acero pre-endurecido (KP4M, HRC30)

- Pieza** Superficie de acero rectangular (300x200x100)
- Condiciones de corte** vc (m/min) = 160, fz (mm/diente) = 1.2, ap (mm) = 0.8, ae (mm) = 20, seco
- Herramientas** Insertos LNMx060310R-MF  
Porta HFMDs032R-5C32-200-LN06 herramienta (Ø32, 5T)

- Régimen de arranque de viruta, Q (cm³/min): 152.8
- Tiempo de corte (min): 31.4

## Rampeado e interpolación helicoidal

### Rampeado

$$L_{min} = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

※ Lmin: longitud mínima de filo de corte  
 α°: ángulo máximo de rampa  
 ap: Profundidad de corte

### Interpolación helicoidal

• ØD = Dia. Herramienta. (mm)  
 • Ød = Paso (mm) = ØDHmin, Max - ØD

- Ajustar avance por debajo del 70% de las condiciones de corte recomendadas para maquinados en rampa y helicoidales
- En maquinados helicoidales la profundidad máxima de cada vuelta helicoidal no puede superar la profundidad máxima para cada inserto según su tamaño
- En maquinados en rampa la profundidad máxima de cada vuelta helicoidal no puede superar la profundidad máxima para cada inserto según su tamaño

## Radio de programación R

----- R2.0    - - - - - R1.6    - · - · - · R1.5

| Placa  | Radio de programación | Condiciones corte |         | Sobre medida | Bajo medida |
|--|-----------------------|-------------------|---------|--------------|-------------|
|  |                       | Radio R           | Max. ap |              |             |
| LNMX060310R-ML<br>LNMX060310R-MF<br>LNMX060310R-MM | R1.5                  |                   |         | 0            | 0.41        |
|  | R1.6 (estándar)       | 1.0               | 1.0     | 0            | 0.38        |
|  | R2.0                  |                   |         | 0.057        | 0.27        |

- En mecanizado CNC: en caso de introducir el programa normal para cada radio de punta, se produciría un corte excesivo y quedaría una zona sin mecanizar en las esquinas
- Para evitar el sobrecorte, deberá tener en cuenta los datos indicados arriba

Mecanizado fiable, herramientas de fresado de alta eficiencia en diámetros pequeños

## HFM **new**

- Aumento de la productividad debido al nuevo diseño y tamaño de la placa, gran avance por diente, y diferentes aristas de corte, para mecanizado con herramientas de pequeño diámetro.
- Buena durabilidad de la placa debido a la combinación de una arista de corte reforzada en el radio y calidades de alta resistencia en mecanizado de alta velocidad y/o materiales de alta dureza.

### ➤ Características

- Debido a la aplicación una arista de corte helicoidal, se consigue una menor carga en el filo y resistencia en la punta
- Incremento de la rigidez debido al doble ángulo de incidencia (11°, 13°), previene las interferencias en gran avance
- Aplicando un ángulo de posición axial negativo al situar la placa en el soporte, se mejora la resistencia al desportillado
- La vida de la herramienta aumenta debido a la variedad de rompevirutas y calidades disponibles para cada material

- **Posición en el soporte**  
- Debido al ángulo axial negativo de montaje, aumenta la resistencia al desportillado.

- **No. de cortes**  
- Mayor número de placas incrementa la vida hrt.  
- HRM(D) Ø20 (2 cortes) --+ HFM Ø20 (5 cortes)

- **Ángulo incidencia**  
- 11, 13 ángulo doble aumenta la estabilidad y disminuye las interferencias

- **Arista de corte principal**  
- Corte de la arista principal mejorado  
- Resistencia de la arista principal mejorada

**Características del rompevirutas**

## Evaluación de rendimiento

### Mecanizado de alta velocidad

- Material pieza  
STD11 (HRC40~45)
- Placa  
LPM(E)W0402□□R
- Calidad recomendada  
PC2505 (1<sup>st</sup>), PC2510 (2<sup>nd</sup>)

- Material pieza  
STD11 (Over HRC60)
- Placa  
LPM(E)W0402□□R
- Calidad recomendada  
PC2505 (1<sup>st</sup>), PC2510 (2<sup>nd</sup>)

### Mecanizado de gran avance

- Material pieza  
KP4M (HRC32),  
NAK80 (HRC43)
- Placa  
LPMT0402□□R-MF
- Calidad recomendada  
PC5300 (1<sup>st</sup>), PC2510 (2<sup>nd</sup>)

- Material pieza  
Ti-6AL-4V (HRC40~45)
- Placa  
LPMT0402□□R-MF
- Calidad recomendada  
PC5300 (1<sup>st</sup>), PC5400 (2<sup>nd</sup>)

### Mecanizado acero templado

- Calidad recomendada en función del golpe

- Calidad recomendada en función de la velocidad de corte

### Efectividad del mecanizado

- Centro de mecanizado
  - BT40 e inferior, se recomienda HFM
  - BT50 y mayor, se recomienda HRM(D)
- Volumen de viruta generado Q (cm<sup>3</sup>/min)
  - Ø8~Ø20, HFM se recomienda
  - Ø20 o superior, se recomienda HRM(D)

**Evaluación de rendimiento**

**Acero al carbono [C45 (DIN)/1045 (AISI)/SM45C (KS), HB200]**

- **Pieza** Molde
- **Condición es de corte**  $vc$  (m/min) = 150,  $fz$  (mm/diente) = 0.6  
 $ap$  (mm) = 0.4,  $ae$  (mm) = 5  
seco
- **Herramientas** **Insertos** LPMT040210R-MF (PC5300)  
**Porta** HFMS1010HR-2S10  
herramienta

**Acero Pre-endurecido [P21 (mejorado) (AISI)/NAK80 (KS), HRC40~41]**

- **Pieza** Molde
- **Condición es de corte**  $vc$  (m/min) = 100,  $fz$  (mm/diente) = 1.26  
 $ap$  (mm) = 0.3,  $ae$  (mm) = 10  
seco
- **Herramientas** **Insertos** LPMT040210R-MF (PC5300)  
**Porta** HFMS1016HR-4S16  
herramienta

**Acero aleado [X155CrVMo12-1 (DIN)/D2 (AISI)/STD11 (KS), HRC40~45]**

- **Pieza** Molde

- **Condición es de corte**  $vc$  (m/min) = 50,  $fz$  (mm/diente) = 1.2  
 $ap$  (mm) = 0.3,  $ae$  (mm) = 10  
Con refrigerante
- **Herramientas** **Insertos** LPMT040210R-MF (PC5300)  
**Porta** HFMS1016HR-4S16  
herramienta

## Rampeado e interpolación helicoidal

### Rampeado

$$Lmin = \frac{ap}{\tan \alpha} \text{ (mm)}$$

\* Lmin: longitud mínima de filo de corte  
 α: ángulo máximo de rampa  
 ap: Profundidad de corte

### Interpolación helicoidal

- ØD = Dia. Herramienta. (mm)
- Ød = Paso (mm) = ØDHmin, Max - ØD
- ØDHmin (Min diametro, mm) = ØD × 2 - 5.4
- ØDHmax (Max diametro, mm) = ØD × 2 - 2

(mm)

| Referencia | Dia. Hrta. ØD | Prof. corte ap | Rampeado                   |      | Interpolación helicoidal |                     |                |

- Ajustar avance por debajo del 70% de las condiciones de corte recomendadas para maquinados en rampa y helicoidales
- En maquinados helicoidales la profundidad máxima de cada vuelta helicoidal no puede superar la profundidad máxima para cada inserto según su tamaño
- En maquinados en rampa la profundidad máxima de cada vuelta helicoidal no puede superar la profundidad máxima para cada inserto según su tamaño

|                | R2.0 (estándar)       |                   |         | 0            | 0           |

- Al programar, en el radio se produce un efecto de sobre y bajo medida al informar el radio correcto de la placa
- Para prevenir la sobre medida, es necesario corregir el programa teniendo en cuenta los valores de sobre medida facilitados.

Alto ángulo de incidencia en el filo de corte, con alta eficiencia en maquinado multifuncional debido a la baja carga de corte

## HRMDouble

- Alto ángulo de incidencia en el filo de corte, con alta eficiencia en maquinado multifuncional debido a la baja carga de corte
- Mayor rendimiento económico debido al uso de sus 6 filos
- La geometría negativa ha sido diseñada para la rigidez en el filo de corte y funcionamiento en ambos lados
- Cuenta con un filo simétrico y es aplicable en maquinados derechos, como en maquinados izquierdos
- El sistema de sujeción de tornillo proporciona estabilidad y una excelente sujeción

### Característica del inserto

#### 1 Radio de punta

- Filo rígido especial para maquinado en espacios pequeños
- Bordes redondos adecuados para la alta alimentación
- Geometría del inserto exintrínica al maquinado derecho ó izquierdo

#### 2 Superficie de Sujeción

- Mejor diseño que da una fuerte sujeción
- Previene la fricción con las virutas

#### 3 Filo de corte Menor

- Mejoramiento en la rugosidad de la superficie
- Diseño para disminuir la fuerza de empuje
- Inserto simétrico para su uso en herramientas derechas e izquierdas

#### 4 Rompevirutas

- Reduce la carga de corte debido al alto ángulo de incidencia
- Mejorado flujo de las rompevirutas
- Prevención del Daño en la cara superior del inserto

#### 5 Filo de corte Mayor

- Alta alimentación por la aplicación del filo de corte con ángulo de alta incidencia
- Realización de baja resistencia de corte en alta alimentación

### Características de cortador

#### Sistema de enfriamiento

- Enfriamiento directo para el mejoramiento del control de virutas
- Mayor rendimiento de vida, debido a la reducción de la temperatura

#### Sistema de 3 superficie limitada

- Poderoso sistema de sujeción
- Estable sistema de sujeción en diferentes resistencias y diversas aplicaciones de maquinado

#### Sistema de sujeción de Tornillo

- Poderosa sujeción brindada por el tornillo
- Amplia superficie de contacto, para una estable sujeción
- Amplia cavidad de alojamiento para una mejor evacuación de viruta

· La holgura lateral impide a la interferencia entre la herramienta y la pieza trabajada, incluso en el maquinado de agujero profundo

## Datos de corte en rampa y helicoidal

Plano Inclinado

Corte Helicoidal

$$L_{min} = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

$$\varnothing D_c = \varnothing D_h - \varnothing D$$

$\varnothing D_c$  = Trayectoria de la herramienta

$\varnothing D_h$  = Diámetro del agujero deseado

$\varnothing D$  = Diámetro de la Herramienta.

- Ajuste la alineación al 70% inferior de lo recomendado en contra de la condición del palano y del corte helicoidal
- En el plano helicoidal, la profundidad de corte máxima por 1 revolución helicoidal del cortador no debe exceder profundidades de corte máximas según el diseño del inserto.

| Codigo          | Diámetro Herramienta $\varnothing D$ (mm) | Diámetro valido decorte $\varnothing D_e$ (mm) | Plano Inclinado |                              |                       | Plano inclinado helicoidal        |                                   |

80% menor

### Resultados de la Prueba

En la comparación del HRMD con nuestro competidor, utilizando las mismas condiciones de corte : la velocidad de corte del HRMD fue mayor con la misma profundidad de corte (ap x ae), el tiempo del ciclo se redujo en un 40% y la vida de la herramienta fue aumentada a más del 60%. HRMD es económicamente más eficiente debido a la utilización de sus 6 fillos de corte en comparación con el tipo EDNW de inserción positiva.

# E Información técnica TP2P

Esta familia de fresas debido a de su sistema tangencial de amarre incrementa la fiabilidad y la productividad a la vez que posibilita una perfecta perpendicularidad

## Tangen-Pro TP2P new

- Estabilidad en el amarre incrementada por la fijación tangencial y el diseño en cuña de los insertos
- Excelente acabado cercano a la perpendicularidad perfecta, mejor aspecto superficial
- Productividad mejorada gracias a un gran ángulo de incidencia y a la forma de las aristas de corte diseñadas para una baja resistencia  
→ Especialmente indicado para mecanizado de alta velocidad y gran avance

### Características del inserto

#### 1 Área de fijación por cuña

- Asiento para fijación en cuña  
→ Genera una mayor fuerza de amarre

#### 2 Rompevirutas con gran ángulo de corte

- Gran ángulo de corte
- Suave flujo de viruta  
→ Incremento en la vida de la placa

#### 3 Saliente convexo

- Mejora la salida de viruta
- Mejora la rigidez

#### 4 Agujero lateral (Tipo tangencial)

- Mayor estabilidad de amarre

#### 5 Mayor ángulo de corte

- Mejora el rendimiento a la vez que disminuye la carga de filo

#### 6 2-niveles de inclinación lateral

- 1ª Positiva incrementa la rigidez
- 2ª negativa incrementa la estabilidad  
→ Resistencia al descantillado y mejora la superficie de acabado

### Características del soporte

- Sistema de fijación tangencial. Placas en forma de cuña y alojamientos espaciosos  
→ Mayor estabilidad de amarre  
→ Menos vibraciones y resistencia al corte durante el mecanizado

- Diseño H/D optimizado con forma curva para una suave salida de viruta  
→ Excelente evacuación en ranurado o escuadrado profundo

#### Fijación tangencial

- Aplicación multi punta  
→ Aplicable a mecanizado de gran avance

#### Diseño eficiente del soporte

- Fácil salida de viruta en ranurado o escuadrado profundo

#### Refrigeración interior

- Evacuación de viruta mejorada
- Mayor duración del inserto

#### Amplio asiento de apoyo

- Mayor fuerza de amarre

#### Amarre en cuña

- Estabilidad en el rendimiento de la inserto

### Guía de aplicación por calidades

| Tipo de mecanizado |                           | P                |              | K         | N        |
|--------------------|---------------------------|------------------|--------------|-----------|----------|
|                    |                           | Acero al carbono | Acero aleado | Fundición | Aluminio |
| Calidades          | Mecanizado alta velocidad | PC5300           | PC5300       | PC6510    | H01      |
|                    | Mecanizado general        | PC5400           | PC5300       | PC6510    | H01      |
|                    | Corte interrumpido        | PC5400           | PC5400       | PC5300    | H01      |

## Características del rompevirutas

| Inserto |  | Filo de corte | Usos               | Características  |
|---------|--|---------------|--------------------|--|
| MA      |  |               | Aluminio           | Filo de corte positivo y afilado para uso exclusivo de materiales no ferrosos, garantizando excelente flujo de viruta y buena resistencia al filo de aportación gracias a la superficie pulida |
| ML      |  |               | Corte ligero       | El diseño del rompevirutas posibilita bajas fuerzas de corte que permiten una excelente vida de herramienta y buenos acabados en corte ligero y de materiales de difícil mecanizado            |
| MM      |  |               | Aplicación general | Diseño universal para operaciones de escuadrado, adecuado para la mayoría de aplicaciones  |

Mayor durabilidad debido al excelente rendimiento de las nuevas calidades

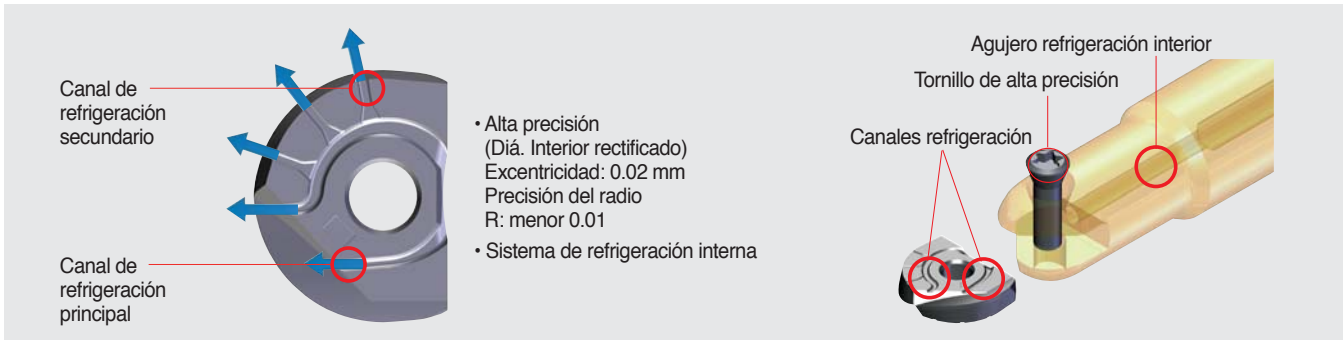

# Laser Mill

- Gran durabilidad debido al excelente rendimiento de las nuevas calidades
- El rendimiento óptimo de la placa se alcanza usando el sistema MQL de refrigeración
- Fácil montaje usando un único tornillo
- Varias líneas de soportes: mango de acero, metal duro y modular
- Fresas de placa intercambiable de alta precisión para acabado de moldes

- Sistema respetuoso con el medio ambiente
- Disminuye el coste de refrigerante
- Lubricación en el punto de corte
- Control de viruta mejorado
- Mayor durabilidad & mejor acabado superficial

## Sistema de fijación

## Características

- Seis placas distintas para un mismo soporte
- Un único tornillo para fijar la placa: sistema sencillo de amarre
- Diversas opciones de mango (Acero, Metal duro, Modular)
- MQL- Respetuoso con el medio ambiente, mayor rendimiento & superficie de acabado

## Guía de uso según material

## Características de los rompevirutas KF y KH

- KF: rompevirutas exclusivo para el mecanizado estable de acero al carbono con sus características de alta resistencia al desgaste en la parte central y diseño mejorado de la cuchilla
- KH: inserto más fuerte con la combinación de ángulo de inclinación y ángulo de alivio que son ideales para el mecanizado de piezas de alta dureza

| Tipo                                    | Comparación del diseño  |  |  |  |

### Formulas para Condiciones de Corte para Fresado

| Practical Velocidad de Corte | RPM |
|------------------------------|-----|
|------------------------------|-----|

$$v_{ce} = \frac{\pi \times D_e \times n}{1000} \text{ (m/min)}$$

$$n = \frac{v_{ce} \times 1000}{\pi \times D_e} \text{ (min}^{-1}\text{)}$$

| Avance per diente | Avance per minute |
|-------------------|-------------------|
|-------------------|-------------------|

$$f_z = \frac{v_f}{z \times n} \text{ (mm/t)}$$

$$v_f = f_z \times z \times n \text{ (mm/min)}$$

| Cantidad de viruta removida | Poder requerido |
|-----------------------------|-----------------|
|-----------------------------|-----------------|

$$Q = \frac{a_p \times a_e \times v_f}{1000} \text{ (cm}^3\text{/min)}$$

$$P_{kw} = \frac{Q \times k_c}{60 \times 102 \times \eta} \text{ (kW)}$$

$$P_{hp} = \frac{P_c}{0.75} \text{ (hp)}$$

|   |  |
|---|--|
| <b>v<sub>ce</sub></b> = Velocidad de corte (m/min)          | <b>P<sub>kw</sub></b> = Poder requerido (kW)                                 |
| <b>v<sub>ce</sub></b> = Velocidad de corte practica (m/min) | <b>P<sub>hp</sub></b> = Caballas de fuerza requeridos (hp)                   |
| <b>n</b> = Revolución por Minuto (min <sup>-1</sup> )       | <b>Q</b> = Régimen de arranque de viruta (cm <sup>3</sup> /min)              |
| <b>D</b> = Diametro de corte (mm)                           | <b>a<sub>p</sub></b> = Profundidad de corte(mm)                              |
| <b>D<sub>e</sub></b> = Diámetro actual (mm)                 | <b>a<sub>e</sub></b> = Anchura del corte (mm)                                |
| <b>v<sub>f</sub></b> = Avance por Minuto (mm/min)           | <b>k<sub>c</sub></b> = Resistencia de corte Especifica (kg/mm <sup>2</sup> ) |
| <b>f<sub>z</sub></b> = Avance por diente (mm/t)             | <b>η</b> = Eficiencia del Maquinado (%)                                      |
| <b>z</b> = Numero de dientes                                |  |

### Practical Velocidad de Corte calculation formulas

1. Formula para el diametro actual

• Formula para el diametro actual

$$D_e = 2 \sqrt{a_p (D - a_p)}$$

2. θ°Uso: Cálculo de la velocidad de corte en el punto (Velocidad de corte según la profundidad de corte cuando rampa)

• Formula : Velocidad de corte parcial

$$v_{ce} = \frac{\pi D \sin \theta \times n}{1000} \text{ (m/min)}$$

$$\theta = \cos^{-1} \left( \frac{D - 2a_p}{D} \right) + (90 - \alpha^\circ)$$

3. En caso de utilizar una p: Cálculo de la velocidad de corte en el punto Q

• Formula : Velocidad de corte parcial

$$v_{ce} = \frac{2\pi n \sqrt{a_p (D - a_p)}}{1000}$$

### Formulas para calcular el corte parcial

|         |  | h (textura de la superficie) (µm) |     |     |     |     |     |      |      |      |      |
|---------|--|-----------------------------------|-----|-----|-----|-----|-----|------|------|------|------|

\* LBH para corte general, LBH-KF para acero al carbono y LBH-KH para acero endurecido

Larga vida útil debido a la alta dureza

## GBE

- Endmill indexable de nariz esférica para aplicaciones de desbaste - corte medio en moldes
- Larga vida útil debido a la alta dureza
- Filo de corte helicoidal y alta precisión en el filo
- Proceso optimizado para el maquinado de moldes con nuestro sistema de refrigeración interna
- Capaces de ajustarse a mitad de procesos de medio y gran desbaste en moldes
- Varios tipos de herramientas: Normal y Larga

### Como colocar el Inserto

1. Ajuste el inserto en el asiento de proyección de la herramienta
2. Presione el inserto en la dirección de la flecha roja y apriete el tornillo con una llave

### Evaluación

**La larga vida de herramienta y anti-rotura con tratamiento especial de la superficie en el portainserto**

**BRE**

- Rendimiento de corte: Un buen control de viruta y rendimiento superior con un óptimo filo de corte
- Cuerpo de alta rigidez: Mejora la vida de la herramienta Fácil de instalar y atornillar con buena durabilidad del tornillo TORX. Un buen control de viruta con nuestro diseño 3D flauta y mejora de la calidad externa
- Inserto: Capaz de aplicarlo en herramientas de alta velocidad y aplicaciones de alimentación debido a la calidad especial que tiene a la resistencia al desgaste y la rotura Funcionamiento estable del filo de corte con alta tenacidad y alto ángulo de inclinación de la rompeviruta

Vista del portaherramienta

- Buen control de viruta
- Buena emisión de calor

- Inserto más amplio asegura un filo de corte fuerte

- Mejor ajuste de la fuerza por la hendidura

**BRE machining tipo for roughing & Condiciones de corte recomendadas**

Fresa multifuncional para la fabricación de moldes

# HAVE

- Herramientas para avance en eje-Z para una mayor rapidez y eficiencia en el mecanizado vertical
- Mecanizado con la totalidad del diámetro

### ➤ Paso máximo en mecanizado vertical

### ➤ Programación en mecanizado vertical

- Trayectoria de mecanizado
- Avance rápido
- $\beta$  Ángulo entre la herramienta y la pieza ( $\beta \geq 1^\circ$ )

- Reducir un 30% el avance hasta que se hayan mecanizado 3 mm
- Mantenga la herramienta alejada de la pieza más de  $1^\circ$  (b) al acabar el mecanizado o al mover la herramienta al paso siguiente

### ➤ Condiciones de corte recomendadas

Productividad alta con grado optimizado para maquinado de alta velocidad

# O-ring Cutter

- Optimizado para el ranurado de la asiento del o-ring en un molde de plástico.
- Garantiza una rugosidad de la superficie superior comparada a HSS y herramienta de soldado
- Productividad alta con grado optimizado para maquinado de velocidad
- Reduce tiempo para rectificación y alineación de la herramienta
- Los tipos están disponibles para las ofertas

## Características

**CET (Chafánado & Herramienta Endmill Chafán)**

- Para biselado interno de hasta 0.5 mm
- Puede ser aplicado a fresado lateral y fácil de rectificación

**CCT (Centrado & Herramienta Chafán)**

- La resistencia del astillamiento realizado en el maquinado en velocidad alta debido al doble ángulo de punta
- Proceso de corte bajo debido membrana delgada

## Ejemplo de aplicación CET/CCT

# E Información técnica Pro-A Mill

**Pulimentado en al cara superior, asegura el buen control de la viruta y reduce la adhesión de material al borde del filo**

## Pro-A Mill

- Pulimentado en al cara superior, asegura el buen control de la viruta y reduce la adhesión de material al borde del filo
- Tipo modular, de tamaño pequeño para maquinado en Aluminio.
- Diferentes tipos modulares para el trabajo en Aluminio.
- Para Escuadra, superficie curva, Plano inclinado.
- El rompeviruta el alto angulo de incidencia permiten una rugosidad superficial exelente Mejor efecto de enfriamiento y control de la viruta a través de sistema de refrigeración de mecanizado, incluso bolsillo profundo.

### Usos

### Pro-A Mill serie

| Tipo   |                   | Productos disponibles  | Sistema de Refrigeracion |

$$Lmin = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

# E Información técnica Pro-X Mill

**Fijación con abrazadera fuerte debido a la parte cóncava del lado de la parte inferior del inserto**

## Pro-X Mill

- Fijación con abrazadera fuerte debido a la parte cóncava del lado de la parte inferior del inserto.
- El buen flujo de la viruta y menos borde de la acumulación han sido adquiridos debido a la superficie pulimentada del inserto.
- El alto ángulo de incidencia del inserto proporciona buen acabado superficial y carga baja de corte.
- Diseñado especialmente para trabajar a máquina de alta velocidad del aluminio.
- Ideal para escuadrado y maquinado de superficies curvas.

### 🔗 Sistema de Sujeción para Alta Velocidad

Diseño especial de fuerte fijación con abrazadera para trabajar a alta velocidad que evita que el inserto se mueva

Rompeviruta tridimensional de baja carga de corte

Varios insertos disponibles (R0.4 ~ R5.0)

•Fijación de diseño con abrazadera según análisis FEM  
•Fijación fuerte con abrazadera del inserto.

### 🔗 Fuerza Centrifuga según RPM

※ TORQUE Tornillo = 4 N·m  
 ※ Inserto indexable: 6.8g

**• Usos**

Nueva fresa de placa intercambiable para el mecanizado de piezas de alta calidad

## Pro-L Mill

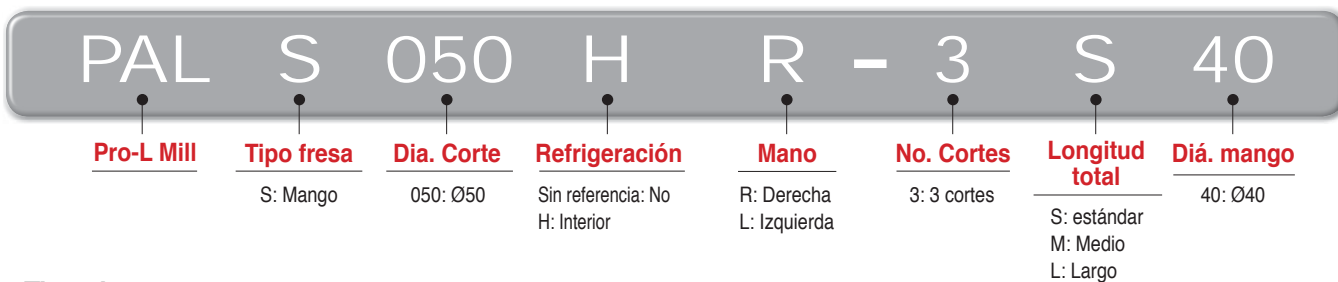

- Perpendicularidad mejorada y menor Resistencia de corte mediante la combinación de la holgura de la cara y la hélice de corte
- Aumento de la productividad incrementando la profundidad de corte en más del 50% en comparación con las soluciones existentes
- Amarre de diseño robusto adoptando un Sistema de doble tornillo
- Flujo de viruta mejorado por el diseño helicoidal de los canales de salida y la refrigeración interior

- Lmin: Cuando ap = 10 mm
- Lmin: Longitud mínima de rampeado
- α°: Ángulo máximo de rampeado
- ap: profundidad de corte

$$Lmin = \frac{ap}{\tan \alpha^\circ} \text{ (mm)}$$

# E Información técnica Pro-XL Mill

Fresa para alta profundidad de corte para aumentar la productividad

## Pro-XL Mill **new**

- **Productividad** - tiempo de corte reducido al terminar el proceso de maquinado con una sola pasada en escuadrado de aluminio
- **Alta calidad** - El paso único permite caras laterales perpendiculares sin irregularidades
- **Amarre estable** - El sistema de dos tornillos asegura la estabilidad de sujeción

### Características

#### Cortadores existentes

Corte completado después de 4 pasadas

- 4 veces más corto tiempo de corte
- Acabado superficial satisfactorio de las caras laterales sin necesidad de procesamiento adicional

#### Pro-XL Mill

Corte completado en una pasadas  
Max ap: 57 mm

Potente sistema de dos tornillos

Flujo de viruta mejorado e inhibición de los bordes acumulados gracias al acabado y bruñido de los filos de corte en forma de espejo

### Ejemplos de aplicaciones

#### Al7075

##### ■ Condiciones de corte

$vc = 500 \text{ m/min}$ ,  $fz = 0.25 \text{ mm/diente}$   
 $ap = 56 \text{ mm}$ ,  $ae = 1 \text{ mm}$   
 $z = 2$

##### ■ Herramientas

**Insertos** LDET650550PPFR-MA  
**Grados** H01  
**Porta herramientas** BT50-PXL04090HR-2F ( $\varnothing D = 40 \text{ mm}$ )

Fresa de calidad superior para mecanizado de alta velocidad de aluminio

# Pro-V Mill **new**

- **Productividad mejorada** - mayor productividad debido a la capacidad de alta velocidad
- **Acabado superficial mejorado** - excelente acabado superficial y perpendicularidad con productos de alta precisión
- **Excelente estabilidad de sujeción** - fuerza de sujeción satisfactoria de los insertos mediante el uso de la forma de la llave

# E Información técnica Pro-V Mill

## Características de la fresa

- El sistema combinado de la sujeción con las ranuras especiales en la cara posterior del inserto y el tornillo asegura un amarre excepcional
- Mecanizado estable previniendo la rotura del inserto
- Evita problemas de rotura del inserto gracias al ángulo axial extremadamente positivo
- Reduce las vibraciones y deja un mejor acabado

## Características de los insertos

## Características del rompevirutas

| Inserto | Filo de corte | Usos                        | Características  |
|---------|---------------|-----------------------------|--|
| MA      |               | Para materiales no ferrosos | Asegura un mecanizado satisfactorio gracias a los filos de corte pulidos optimizados para aluminio |

**Condiciones de corte recomendadas**

# Ajuste Fresado Lateral

## ➤ Sistema de codificación

P: Tipo plano

B: Tipo saliente

A: Ajuste del cortador

**Ajuste**

Tipo de fresa

Para cortador lateral medio, la anchura de corte sera escrita solamente

**Anchura máxima del Cortador**

**R A FC B 125 14 18 - R**

**Sistema de Sujeción**

R: Tipo Radial (usando SDXT)

T: Tipo tangencial (usando CNHQ)

**Configuración del Inserto**

FC Cortador Completo

HC Cortador Medio

**Diametro del corte (Ø)**

125

**Anchura máxima del Cortador**

14

**Mano del Cortador**

| Sin Marca                   | R                               | L    |
|-----------------------------|---------------------------------|------|
| Neutral                     | Der.                            | Izq. |
| Cortador Lateral Tipo Plano | Cortador Lateral Medio Con Base |      |

## ➤ Tipo Tangencial (Alta Rigidez)

- Medio/desbaste
- Funcionamiento excelente en el medio a la operación de la tabla de la gama del desbaste (14~30 mm) debido a la rigidez fuerte del cortador
- Buen funcionamiento con la interrupción pesada y la profundidad

## ➤ Tipo Radial (Baja Carga de Corte)

- Medio/acabamiento
- Conveniente para operación de anchura pequeña de corte (12~24mm)
- Rompeviruta 3dimensional proporciona una operación de corte lisa
- Varios rompevirutas según usos, están disponibles: MF, MM, FA
- Inserto económico usando 4 filos por pastilla

## ➤ Característica del inserto

- El cortador lateral ajustable exacto puede controlar la anchura del cortador por la unidad.
- Puesto que la anchura del cortador es ajustable hasta ±1.5 mm, el solo cortador puede cubrir varia anchura de corte.
- Diseñado especialmente la fijación del sistema con abrazadera del localizador proporciona rigidez excelente usando la deformación elástica del localizador.
- El tipo tangencial que afianza el sistema con abrazadera de parte movable proporciona bastante fuerza puede soportar la anchura grande de la operación del corte.
- Rompeviruta de 3 dimensiones del inserto proporciona el corte liso y carga baja de corte para corte medio a acabado

## ➤ Manual Operacion

### • Cómo montar el cortador lateral de ajuste

1. La cuña de la abrazadera ① en ⑦localizador-acuña levemente elbolsillo usando ②el tornillo de la cuña.
2. Ponga ③ el localizador en ⑦localizador-acuña el bolsillo junto con ⑧la chavetera.
3. Apriete ⑥el tornillo de la forma cónica poco pedacito para fijar la posición apropiada del localizador.
4. Apriete ②el tornillo de la cuña firmemente usando el esfuerzo de torsión de los 70~80N.m.
5. Después de que esté puesto el ④insert en el bolsillo del parte movable ③del localizador, lo afianza con abrazadera con el tornillo del parte movable de ⑤usando el esfuerzo de torsión de los 40~50N.m.

### • Cómo ajustar anchura del agotamiento y de corte

1. Coloque el cortador lateral de ajuste después de limpiar a la plantilla para la medida.
2. Desatornille ②el tornillo de la cuña primero, después apriete ①la cuña levemente otra vez usando el esfuerzo de torsión de los 8N.m.
3. Ajustando la altura del filo usando un calibrador del dial para fijar la anchura del cortador.
4. Apriete ②el tornillo de la cuña firmemente usando el esfuerzo de torsión de los 70~80N.m.
5. Para acabar el ajuste, apriete ⑥el tornillo de la forma cónica para la abrazadera fuerte.

## Tipo Tangencial

### Nota (Al montar los Insertos)

- Las Rompevirutas de los insertos deben ser enfrentados en la cavidad corte
- Apriete el tornillo del inserto después de colocarlo en esta parte del asiento del cortador
- Si existe un espacio entre el inserto y el asiento en el cortador después del P montaje, puede causar problemas con la herramienta.

# E Información técnica Wind Mill

Para ranurado de piezas con radios de punta de diverso tamaño y anchura.

## Wind Mill

- Mecanizado óptimo para aplicaciones de ranurado
- Filo de corte secundario con un diseño de ranura único que reduce la carga de corte y alarga la vida útil de la herramienta
- Sistema de fijación especial que impide la sujeción incorrecta y la fractura

### Descripción producto

### Sistema de códigos de fresas

### Sistema de códigos de placas

### Características

- Geometría ideal para obtener una rugosidad superficial superior y una mayor vida útil de la herramienta
- Ranura perpendicular
- La parte sobresaliente del asiento de la punta evita la mala sujeción y las roturas

- Piezas con radios de punta de diverso tamaño y anchura (R0.2~R2.0)

**Ejemplo de aplicación**

■ **Uso** Chasis vehículos de motos

■ **Pieza Trabajo** FCD500K

■ **Condiciones conditions**  
 vc (m/min) = 200  
 fz (mm/diente) = 0.2  
 vf (mm/min) = 600  
 ap (mm) = 2~3

■ **Herramientas** KSF140R-T14-HM-2  
 SNHT1205408R/L-WX (PC5300)

■ **Resultado prueba**

■ **Uso** Agarradera para embarcación

■ **Pieza Trabajo** Acero Suave

■ **Condiciones conditions**  
 vc (m/min) = 560  
 fz (mm/diente) = 0.09  
 vf (mm/min) = 750  
 ap (mm) = 6

■ **Herramientas** WFSP178R/L-T06  
 SNHT1203508R/L-WX (PC5300)

■ **Resultado prueba**

**Condiciones de corte recomendadas**
