Thread Turning

THREAD TURNING

KORLOY, known for superior, highly precise threading technology, introduces a thread turning which offers a high efficiency in a manufacturing process. KORLOY's thread turning tools ensure excellent performance in a challenging thread operations. For example, in high helix and small diameter internal machining, it effectively resolves a common issues during manufacturing process like chip evacuation problems, bad surface finish, and shorter tool life.

KORLOY's thread turning tools feature precisely ground thread inserts and outstanding chip control technology. Chips are smoothly evacuated, minimizing machining halts due to chip blocking and supporting the achievement of high-quality threading. In addition, the application of PC5030T, premium PVD AlTiN coating, enhances cutting speed and maximizes tool life. This system is also adaptable to various thread forms, enabling a wide range of machining in a single setup.

KORLOY's thread turning is a smart solution that simultaneously increases both thread quality and productivity, demonstrating enhanced competitiveness in manufacturing sites through substantial improvements in efficiency and cost reduction for customers.

Experience a new standard in threading with KORLOY's thread turning

Feature

- **High-quality surface finish** - Achieves excellent surface quality during threading with precisely ground inserts.
- **Various Thread Form Compatibility** - A wide range of operations is possible in a single system.
- **Perfect Chip Evacuation** - Smooth and uninterrupted chip evacuation during machining with chip breaker, preventing from chip blocking.
- **Increased Productivity** - Longer tool life and cost savings through premium coating design

Insert features

Reinforced shape and edge angle

Reinforced shape to reduce cutting resistance

Grade

Premium and general grade with improved wear resistance

Optimized cutting edge design

Excellent surface finish of thread

Advanced surface treatment

Reinforced cutting edge and improved surface treatment

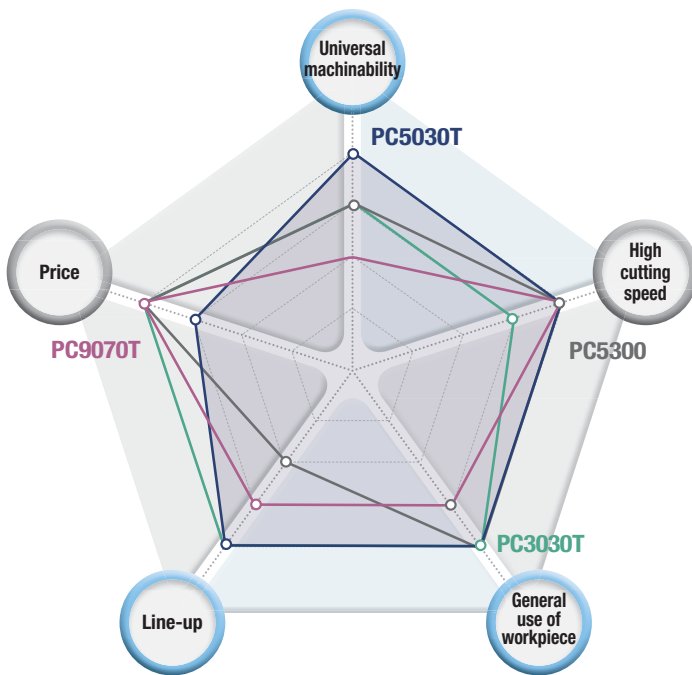

Grade features

Grade	Feature		Available insert type
PC5030T 	Premium general use	<ul style="list-style-type: none"> • New PVD- coated versatile thread grade • Enhanced productivity through improved wear resistance and stabilized tool life due to post-coating treatment 	Ground insert (ER/IR)
PC5300	Universal grade	<ul style="list-style-type: none"> • For chip breaker type only • Stable machining on a wide application due to fine-grained carbide substrate with balanced heat resistance and toughness • Excellent wear resistance and oxidation resistance due to AlTiN coating film Outstanding performance on high speed machining 	ERM/IRM (Insert with Chip breaker)
PC3030T	Grade for threading inserts	<ul style="list-style-type: none"> • A tough sub-micron substrate with TiAlN coating provides good fracture toughness and excellent wear resistance • Outstanding performance on STS and hard to cut materials 	Ground insert (ER/IR)
PC9070T	Grade for threading inserts	<ul style="list-style-type: none"> • Strong wear resistance in stainless machining thanks to multilayer PVD coatings 	Ground insert (ER/IR)

Grade selection guide

PC5030T ^{New}

- New PVD versatile coating
- Improved wear resistance and extended tool life through post-coating treatment

PC5300

- Exclusive grade for chip breaker
- Ultra-fine grain grade and stable performance

PC3030T

- Strengthened cutting edge with high-toughness fine-grain substrate application
- Chipping resistance through optimized geometry

PC9070T

- Excellent wear resistance in stainless steel machining
- Multi-layer PVD coating

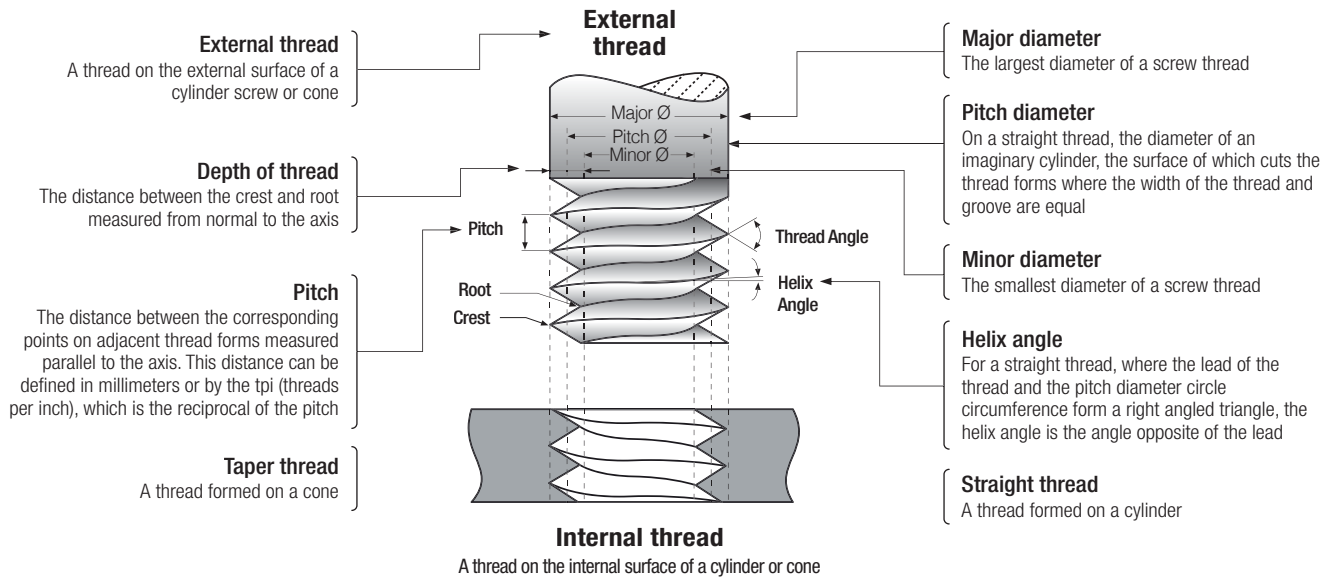

Grade	Universal machinability	High cutting speed	General use of workpiece	Line-up	Price
PC5030T ^{New}	★★★★	★★★★	★★★★	★★★★	★★★
PC5300	★★★	★★★★	★★★★	★★	★★★★
PC3030T	★★★	★★★	★★★★	★★★★	★★★★
PC9070T	★★	★★★★	★★★	★★★	★★★★

Special features

Left handed thread
A thread which, when viewed axially, winds in a counter clockwise and receding direction. All left handed threads are designated LH

Right handed thread
A thread which, when viewed axially, winds in a clockwise and receding direction. Threads are always right handed unless they are specified

The helix angle (β)
For a straight thread, where the lead of the thread and the pitch diameter circle circumference form a right angled triangle, the helix angle is the angle opposite of the lead

Machining a multi-start thread

- A thread in which the lead is an integral multiple, greater than one, of the pitch. A multi-start thread permits a more rapid advance without a coarser (larger) thread form

Shape of insert cutting edge

- Cutting without machining the outer diameter of the thread
- Usable for various pitches sharing the same helix angle

Advantage: High versatility

- Complete machining the entire thread form, including the crest
- Required dedicated insert for each pitch and specification

Advantage: Precise finished shape

- Machining the full profile for fine threads
- Machining outer diameter by the minor cutting edge

- Machining the complete thread form without outer diameter finishing
- Mainly used for trapezoidal threads

Thread turning method

Thread	Inserts & Tool holder	Rotation	Feed direction	Helix method	Drawing no.
Right Handed External	EX RH	Counter clockwise	Towards chuck	Regular	1
	EX LH	Clockwise	From chuck	Reversed	2
Right Handed Internal	IN RH	Counter clockwise	Towards chuck	Regular	3
	IN LH	Clockwise	From chuck	Reversed	4
Left Handed External	EX LH	Clockwise	Towards chuck	Regular	5
	EX RH	Counter clockwise	From chuck	Reversed	6
Left Handed Internal	IN LH	Clockwise	Towards chuck	Regular	7
	IN RH	Counter clockwise	From chuck	Reversed	8

Calculating the helix angle (β)

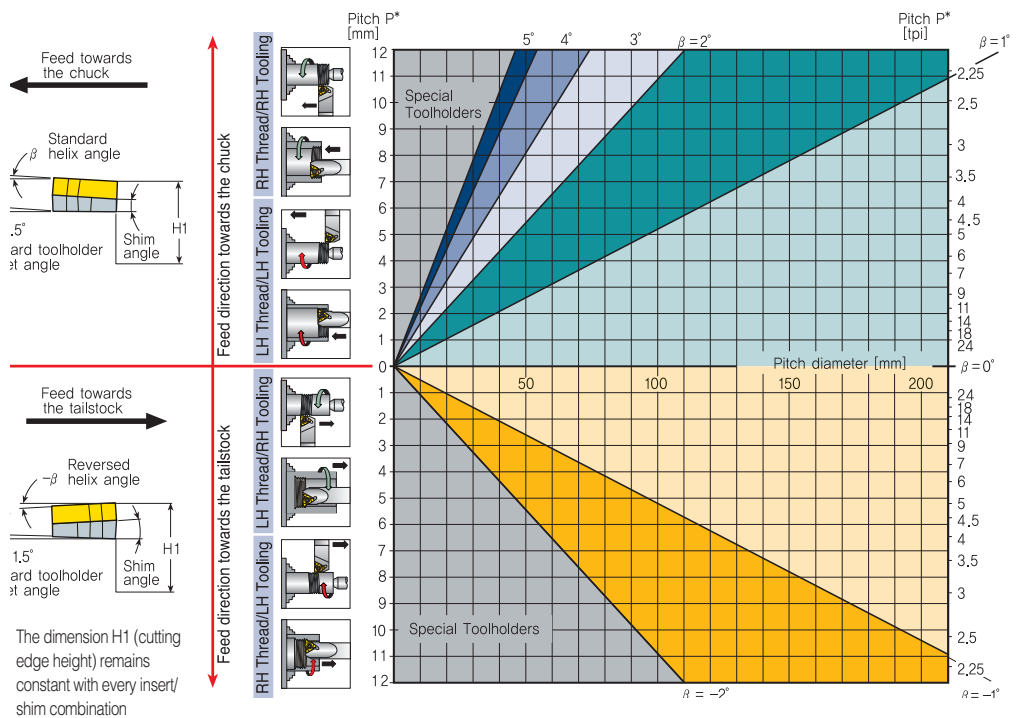

• The helix angle is calculated by the following formula:

$$\beta = \tan^{-1} \frac{TP \times N}{\pi \times DC}$$

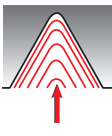

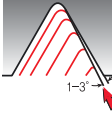

- β: Helix angle (°)
- P: Pitch (mm)
- N: No. of starts
- D: Pitch diameter (mm)
- Lead = P x N

• The helix angle can also be found from the diagram below

(Helix angle diagram)

➤ Thread infeed method

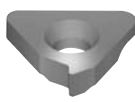

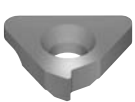

Infeed	Application
 <p>Radial infeed</p>	<ul style="list-style-type: none"> • When the pitch is smaller than 16 tpi • For material with short chips • For work with hardened material <p>➤➤➤ Radial infeed is the simplest and quickest method. The feed is perpendicular to the turning axis, and both flanks of the insert perform the cutting operation. Radial infeed is recommended in 3 cases.</p>
 <p>Flank infeed (modified)</p>	<ul style="list-style-type: none"> • When the thread pitch is greater than 16 tpi. Using the radial method, the effective cutting edge length is too large, resulting in chatter. For TRAPEZ and ACME. The radial method results in three cutting edges, making chip flow very difficult. <p>➤➤➤ Flank infeed is recommended in the following cases.</p>
 <p>Alternate flank infeed</p>	<ul style="list-style-type: none"> • This method divides the load equally on both flanks, resulting in equal wear along the cutting edges. Alternate flank infeed requires more complicated programming, and is not available on all lathes. <p>➤➤➤ Use of the alternate flank method is recommended especially in large pitches and for materials with long chips.</p>

➤ Number of passes

Pitch	TP	0.5	0.75	1	1.25	1.5	1.75	2	2.5	3	3.5	4	4.5	5	5.5	6	8
	TPI	48	32	24	20	16	14	12	10	8	7	6	5.5	5	4.5	4	3
No. of passes		4~6	4~7	4~8	5~9	6~10	7~12	7~12	8~14	9~16	10~18	11~18	11~19	12~20	12~20	12~20	15~24

※ One cutting depth is calculated by total cutting depth divided into machining times
 ex) ER16-1.5ISO, HMIN 0.92: If 10 times machining, one cutting depth is 0.092 (0.92/10)

➤ Shim

Step by step thread turning

Application

- Thread: External right Handed ISO metric M40x2.5
- Material: 42CrMo4

1 Choose the thread turning method

Feed direction towards the chuck was chosen
Therefore an external right Handed insert and an external right Handed holder will be used

2 Choose the insert size

• Chosen insert : ER16-2.5 ISO

Insert size IC	Pitch TP	Ordering code RH (Right Handed)	Shim		Tool holder
			RH (Right Handed)		
9.525	2.5	ER16-2.5ISO	ATE16		ERH□□-16

3 Choose the tool holder

• Chosen tool holder : ERH25-16

Insert size IC	Pitch RH (Right Handed)	Dimensions (mm)				
		H=HF	B	WF	OAL	LH
9.525	ERH25-16	25	25	25	153.6	30

4 Determine

• From the table, using a pitch of 2.5 mm (10 tpi) and a workpiece diameter of 40 mm (1.57"), we find the helix angle to be 1.5°

5 Choose the correct shim

Resultant Helix angle		1.5°
Insert size (mm)	IC	9.525
	L	16
Ordering code		ATE16

6 Choose the carbide grade and cutting speed

• Carbide grade chosen : PC3030T • Cutting speed : 140 m/min

Workpiece	HB	vc (m/min)	
		PC3030T	
P Low alloy steel	Non-hardened	180	85~145
	Hardened	275	75~140
	Hardened	350	70~135

7 Determine the number of passes

• Carbide grade chosen : PC3030T • Cutting speed : 140 m/min

Pitch	TP	1.50	1.75	2.00	2.50	3.00	3.50	4.00
	TPI	16	14	12	10	8	7	6
No. of passes		6~10	7~12	7~12	8~14	9~16	10~18	11~18

8 Summary

Thread type	ISO M40 x 2.5 External right handed
1. Feed direction	Towards the chuck
2. Insert and grade	ER16-2.5ISO, PC3030T
3. Tool holder	ERH25-16
4. Helix angle	1.5°
5. Shim	ATE16
6. Cutting speed	140 m/min
7. Number of passes	10

➔ Cutting condition depending on

Workpiece	Material type		Coolant	Coolant type		
	Material dimension			Holders	Holder cross section area	
	Diameter and length chipflow character				Holder overhang	
	Material hardness				Through coolant option	
Thread application	External or internal		Insert	Shank type: Carbide, alloy		
	Profile shape			Carbide implant grade		
	Surface finish			Profile shape: Pitch and depth		
Machine	Machine stability		Nose radius			
	Max. RPM		Chip breaker style			
	Clamping system stability					

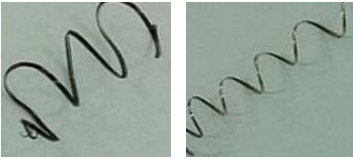

➔ Trouble shooting

Problem	Possible cause	Solution
Increased flank wear	Cutting speed too high> Depth of cut too low/too many passes> Unsuitable carbide grade> Insufficient cooling>	Reduce cutting speed/use coated insert Increase the depth of cut per pass Use a coated carbide grade Increase coolant flow rate
Uneven cutting edge wear	Incorrect helix angle> Wrong infeed method>	Choose the correct shim Use the alternating flank infeed method
Extreme plastic deformation	Depth of cut too large> Insufficient cooling> Cutting speed too high> Unsuitable carbide grade> Nose radius too small>	Decrease depth of cut/ increase number of passes Increase coolant flow rate Reduce cutting speed Use a tougher carbide Use an insert with a larger radius, if possible
Cutting edge breakage	Depth of cut too large> Extreme plastic deformation> Insufficient cooling> Unsuitable carbide grade> Instability>	Decrease depth of cut/ increase number of passes. Use a tougher carbide Increase flow rate and/ or correct flow direction Use a tougher carbide Check stability of the system
Built-up edge	Incorrect cutting speed> Unsuitable carbide grade>	Change the cutting speed Use a coated carbide
Thread profile is too shallow	The tool is not at the workpiece axis height> Insert is not machining the thread crest> Worn insert>	Change tool height Measure the workpiece diameter Change the cutting edge sooner
Poor surface quality	Too low cutting speed> Wrong shim> Flank infeed method is not appropriate>	Increase cutting speed Choose correct shim Use the alternate flank or radial infeed method

Threading Inserts with Chip Breaker

- Economical insert
- Good toughness and high accuracy as ground type inserts
- Exclusive insert design improves chip control
- New grade for general application of various kinds of workpieces

⚠ For the safe metalcutting

- Use safety supplies such as protective gloves to prevent possible injury while touching the edge of tools.
- Use safety glasses or safety cover to hedge possible dangers. Inappropriate usage or excessive cutting condition may lead tool's breakage or even the fragment's scattering.
- Clamp the workpiece tightly enough to prevent its movement while its machining.
- Properly manage the tool change phase because the inordinately used tool can be easily broken under the excessive cutting load or severe wear, and it may threat the operator's safety.
- Use safety cover because chips evacuated during cutting are hot and sharp and may cause burns and cuts. To remove chips safely, stop machining, put on protective gloves, and use a hook or other tools.
- Prepare for fire prevention measures as the use of the non-water soluble cutting oil may cause fire.
- Use safety cover and other safety supplies because the spare parts or the tools can be pulled out due to centrifugal force while high speed machining.
