

High precision mold manufacture solution

The Mirror Endmill

cBN Endmill / H-Star Endmill

The Mirror Endmill

cBN Endmill / H-Star Endmill

The Mirror

cBN Endmill

cBN ball Endmill for high hardness cutting

For polishing of high precision workpiece and high hardness mold

- Optimal surface finish by PCD ball Endmill with no edge
- Nano-level surface finish due to its ultra-fine Endmill
- Enhanced wear resistance from applying the optimal grade for PCD

The Mirror

cBN Endmill

Launching of cBN radius Endmill for high hardness cutting

For medium cutting of high precision workpiece and mold machining above HRC60

- Higher productivity in high speed machining
- Better wear resistance of tool due to applying the optimal grade for cBN
- Good surface finish through connecting smooth cutting edge and body
- Long tool life from strong cutting edge

The Mirror

H-Star Endmill

Suitable for high speed cutting of workpiece with HRC50~63

Proper for the various cutting processes with long neck, rib and taper neck etc.

- Stronger cutting edge strength of the tool applied ultra-fine substrate
- Enhanced high temperature heat resistance by applying new coating layer on the edge in high speed cutting
- Stable cutting performance due to the optimal cutting edge for high speed machining

The Mirror cBN Endmill

※ The recommended cutting condition in the chart above is for cutting with external coolant and depth of cut, under 50.

Notice for cBN Endmill

- Please select the same drill diameter as the Endmill for finishing (cBN Endmill) considering minimizing the amount of rest cutting in selecting Endmill for medium cutting

The Mirror Endmill

Application Examples

Surface finish, wear resistance

- **Workpiece** _____ STD11(HrC60)
- **Cutting condition** _____ n (min⁻¹) = 40,000, vf (mm/min) = 700, ap (mm) = 0.005, ae (mm) = 0.01, Mist
- **Tool** _____ cBN-MBE2004-050-N010S04
- **Wear resistance** _____ 5 μ m (Continuous cutting for 2h)

» After continuous cutting for 2h

Good wear resistance

» Maintain the shape of cutting edge even after continuous cutting for 2h

- **Workpiece** _____ STD11(HrC60)
- **Cutting condition** _____ n (min⁻¹) = 25,000, vf (mm/min) = 1,000, ap (mm) = 0.015, ae (mm) = 0.15, Mist
- **Tool** _____ cBN-MRE2020-050-R010-N04S04
- **Wear resistance** _____ 27 μ m (Cutting for 100 min)

» After cutting for 100 min, $Ra(\mu$ m) = 0.03

Good wear resistance

» After cutting for 100 min, the cutting edge was kept sharp.

Machining example

- **Workpiece** STD11(HrC60)
- **Size** 267 × 101 × 50mm
- **Coolant** Oil mist
- **Tool** cBN-MBE2004-050-N010S04

» After cutting for 3h and 25min, the cutting edge was kept sharp.

No.	cutting	Tool	n (min ⁻¹)	vf (mm/min)	ap (mm)	ae (mm)	Stock	Cutting hour	Cutting pass
1	Roughing	ESB734060	8,500	1,500	1	2	0.05	51m	1

Depth of cut

- $ap = 0.02D$
- $pf = 0.05D$

※ Please reduce the RPM and feed rate in the chart above with equal proportions in clamping workpiece with chattering and low rigidity.

Application Examples

Wear resistance, chipping resistance

- Workpiece _____ STD11Heat treatment (HrC55~60)
- Cutting conditions _____ n (min⁻¹) = 40,000, vf (mm/min) = 400,
 ap (mm) = 0.03, ae (mm) = 0.03, Mist
- Tools _____ ESLNB2006-2
- Machining _____ Pocket

For the safe metalcutting

- Use safety supplies such as protective gloves to prevent possible injury while touching the edge of tools.
- Use safety glasses or safety cover to hedge possible dangers. Inappropriate usage or excessive cutting condition may lead tool's breakage or even the fragment's scattering.
- Clamp the workpiece tightly enough to prevent its movement while its machining.
- Properly manage the tool change phase because the inordinately used tool can be easily broken under the excessive cutting load or severe wear, and it may threat the operator's safety.
- Use safety cover because chips evacuated during cutting are hot and sharp and may cause burns and cuts. To remove chips safely, stop machining, put on protective gloves, and use a hook or other tools.
- Prepare for fire prevention measures as the use of the non-water soluble cutting oil may cause fire.
- Use safety cover and other safety supplies because the spare parts or the tools can be pulled out due to centrifugal force while high speed machining.
